Specialty Programs

The MD curriculum at the Icahn School of Medicine at Mount Sinai is designed to prepare students for the opportunities and challenges of practicing medicine and conducting biomedical research in the twenty-first century. For those students looking to apply their MD training to broader professional horizons, we offer several specialty programs designed to maximize the learning experience in multiple areas of study and provide students an entry point to a rich variety of postgraduate career options.

Verily Academic Partnership

ISMMS students have the opportunity to participate in a two-year fellowship at Verily between their third and fourth years of medical school. Accepted students will be given research mentorship from some of the world’s most innovative scientists leading the field in breakthroughs in the life sciences, at Google’s Mount View, California campus. This unique combination of training and education positions our students to be the generation of physician scientists who define the course of health care.

For additional information on the Verily Academic Partnership, visit icahn.mssm.edu/verily

Deloitte Consulting Academic Partnership

The Deloitte Consulting Academic Partnership trains future leaders in academia, clinical care, business, policy, administration, and operations in health care. Training options include a competitive summer internship working in Deloitte’s Federal Health Care Sector between the first and second year of medical school as well as a one-year paid health care consulting fellowship between the third and fourth year. Both provide strong mentorship and real-world business, consulting, and leadership credential at one of the world’s leaders in health care consulting.

ISMMS/McKinsey & Company Academic Partnership

Our students have the option of applying to McKinsey & Company for a two-year fellowship in health care consulting and leadership that will take place between the third and fourth years of medical school. This fellowship provides an innovative alternative to more traditional MD/MBA options and provides students with a mentored experience in real-world business, consulting, and leadership from a recognized leader in health care consulting.

For additional information on the ISMMS/McKinsey Academic Partnership, visit icahn.mssm.edu/mckinsey

PORTAL Program (MD/MSCR)

The PORTAL (Patient-Oriented Research Training and Leadership) program is a five-year MD/Masters in Clinical Research (MSCR) Program which offers students an in-depth clinical research experience. It is a highly selective, strongly mentored program providing a multidisciplinary approach to clinical investigation and how it drives the practice of medicine. Students receive a stipend between their third and fourth years in order to devote a full year to their thesis research. PORTAL provides students with structured coursework and hands-on experience to prepare them for careers in clinical research.

For additional information on PORTAL, visit icahn.mssm.edu/PORTAL

Primary Care Scholars Program

The Primary Care Scholars Program is a four-year track that prepares students for a successful and sustainable career in primary care medicine. Primary Care Scholars are paired with a clinical and career mentor from the Department of Family Medicine for the entirety of their undergraduate medical education. Scholars will actively engage with outstanding faculty to complete a scholarly product, participate in a longitudinal clerkship, a Primary Care Sub-Internship, and be given the opportunity to take part in a primary care summer immersion experience, learning core principles of patient-centered care, health care disparities, team-based care, health policy, and quality improvement. Primary Care Scholars are eligible for a loan forgiveness program in which their medical school tuition loans will be forgiven in their entirety once the scholar has been in a primary care practice in an underserved community for two years following the completion of residency training. If a scholar chooses to pursue a specialty other than primary care, they will be required to repay their award as a low-interest ISMMS loan.
