PROGRAM GOALS
The exciting world of a hospitalist consists of high volume, high acuity, great challenges, and limitless potential to help patients. The role could not be more rewarding or more demanding. This course will provide the expertise and skills to allow hospitalists to deliver the best possible care for their patients.

Hospitalists must keep up-to-date to ensure they are using the best diagnostic strategies and prescribing the best treatments for their patients. Our faculty consists of internationally renown experts who will present plenary lectures and workshops in the most common diseases seen by hospitalists. Lectures are designed to be case-based, concise, and to incorporate the most recent evidence into clinical recommendations. In addition, our annual “Update in Hospital Medicine” will identify and review the most important trials impacting our field over the past year.

Hospitalists are also uniquely positioned to lead hospital improvement efforts, enhance patient safety, and reduce medical errors. By increasing expertise in addressing medical errors and skills in quality improvement, this symposium will give hospitalists the skills and confidence to meaningfully participate in and lead initiatives at their hospitals.

Our highly rated series of WORKSHOPS is designed to provide participants with a choice of three “tracks” in which to gain expertise:

1. Clinical care
2. Hospital quality and patient safety
3. Palliative care

Participants can concentrate in one of these tracks to develop their expertise or can mix-and-match tracks to experience a greater variety of topics.

This 1.5 day-long program will provide the knowledge and skills needed to:

- Manage patients with common acute and chronic conditions, including:
  - Oncology for the Hospitalist
  - HEARTBREAK FASTBREAK – ACS, CHE; EPS in 60 minutes
  - The Hot Joint
  - Acute Stroke
  - Sickle Cell Disease – Pearls and Pitfalls
- Participate in and lead initiatives in hospital quality and patient safety:
  - How to Use QI Tools and Methods
  - Leveraging Information Technology (IT) to Enhance Safety
  - Reducing Readmissions – Essential Elements
- Assess and Manage Palliative Care Patients:
  - Goals of Care – DNR/DNI and the Family Meeting
  - Hospice – What, When, and How?
  - Pain Management and other Symptoms at the End-of-Life

PROGRAM OBJECTIVES
At the conclusion of this CME activity, the participant should be able to:

- Assess and manage acute cardiac conditions, including ACS and CHE, using most recent evidence
- Treat acute pain using appropriate narcotic regimens
- Optimize glycemic control in hospitalized diabetic patients using short and long-acting insulin
- Code and bill correctly for inpatient visits
- Utilize quality improvement skills and techniques and apply these skills in their hospital setting
- Identify patients at the end-of-life who will benefit from hospice care and understand how to access hospice services
