MD/PhD Program (MSTP T32 Grant)

Training the next generation of physician-scientists through a rigorous, integrated joint degree MD/PhD program in an environment that promotes cutting-edge research is a major priority for Mount Sinai's Graduate School of Biomedical Sciences' MD/PhD program. The MD/PhD program began in 1971 and was awarded its first funding from the NIH NIGMS as a Medical Scientist Training Program in 1977. Our MSTP training grant has been successfully renewed since its inception which allows us to maintain a 38 year legacy of continuous 5-year NIH funding. Importantly, there has been significant growth in the program. As of May 2015, there are 209 graduates of the MSTP and there are currently 92 students. Consistent with the high priority that MSSM's leadership places on training future physician-scientists is the fact that approximately 50% of the PhD Students are currently pursuing a MD/PhD degree (56% of the MD/PhD students are currently in the PhD phase). This high percentage represents a significant Institutional commitment, as only a portion of the entire MD/PhD training is supported by the MSTP grant funds.
