MS in Genetic Counseling

The Master of Science Program in Genetic Counseling is sponsored by Mount Sinai School of Medicine's Department of Genetics and Genomic Sciences, one of the largest departments of its kind in the world. Our faculty is renowned for cutting edge basic science research, as well as research in the diagnosis and treatment of genetic disorders. Our large multidisciplinary center provides clinical and laboratory services to a wide range of culturally diverse patients and their families and we have a proven commitment to the community we serve.

The Genetic Counseling Program was initially established in 1991 as a Certificate Program to train individuals with related advanced degrees to become genetic counselors. The Program transitioned to the Master of Science Degree in 1995 and is accredited by the American Board of Genetic Counseling. As part of The Mount Sinai Medical Center, our students have access to the laboratories, libraries, and educational resources of the School of Medicine and are affiliated with The Mount Sinai Hospital. The integration of academic and clinical disciplines within one of the country's preeminent medical centers provides an ideal environment for our Master's Program, affording our students unparalleled opportunities for study, research, and practice in the challenging and exciting field of genetic counseling.
