Selikoff Center for Occupational Health

The Selikoff Center for Occupational Health at the Icahn School of Medicine at Mount Sinai provides comprehensive diagnostic and treatment services to workers suffering from occupational diseases. The Center’s staff of industrial hygienists, ergonomists, and other occupational health professionals offers health and safety education and preventive services to patients, unions, employers, and other groups. The Center’s physicians are board-certified in occupational and environmental medicine or are specifically trained in the diagnosis and treatment of occupational illnesses and injuries.

The Selikoff Center is a founding member of the Occupational Health Clinic Network, a long-standing state-funded network that offers services to injured and ill workers throughout New York State. The Center provides these services within the New York City and Lower Hudson Valley regions at four clinical centers located in Manhattan, Staten Island, Monroe, and Yonkers.

As the site of Mount Sinai’s World Trade Center Health Program (WTCHP) Clinical Center of Excellence (CCE), the Selikoff Center continues to provide medical monitoring and treatment services to workers and volunteers who were involved in the rescue, recovery, and cleanup efforts after the attacks on September 11, 2001. These workers were exposed to many toxins at the World Trade Center site and have developed medical and mental health conditions related to their exposure. Mount Sinai’s CCE is the largest of the WTCHP Clinical Centers of Excellence with a responder population exceeding 22,000 patients.

The Selikoff Center is located in the Division of Occupational and Environmental Medicine, Department of Preventive Medicine, and is named after Irving J. Selikoff, MD, a physician known for his seminal research on asbestos-related disease and his tireless advocacy on behalf of workers.
