Using the Clinical Research Center (CRC)

Clinical Research Centers (CRC) at Mount Sinai Information for Investigators

The Clinical Research Centers (CRC) at the Mount Sinai School of Medicine is located on the second floor of 1184 Fifth Avenue. This resource is designed to facilitate clinical research by Mount Sinai faculty members and staff and is supported by a grant from the National Center for Research Resources of the National Institutes of Health. The CRC provides the necessary infrastructure and training for Mount Sinai investigators to conduct their research studies, and resources are utilized by investigators who wish assistance in aspects of research design, methodology and the actual carrying out of the study as the CRC is staffed by nurses with advanced degrees (i.e., nurse practitioners). Currently, there are over one hundred studies across medical disciplines that are conducted at the CRC. These include, but are not limited to, research in Endocrinology, Oncology, Human Genetics, Geriatrics, Hematology, Neurology, Pediatrics, and Psychiatry.

Before the implementation of any protocol within the CRC facility, the study must be reviewed by the CRC Scientific Advisory Committee (SAC) in addition to being approved by the Mount Sinai IRB. The committee, which meets monthly, is comprised of a team of nineteen investigators whose expertise spans all areas of clinical research.

For applications, forms, and a list of SAC meeting dates and submission deadlines, please look under Investigator Information on the CRC website:

http://www.mssm.edu/research/resources/general-clinical-research-center/

If you would like to learn more about the CRC and how it can be of assistance to your research efforts, please contact Rachel Posner, CRC Administrative Director, by phone: 212-241-6046 or email: rachel.posner@mountsinai.org
