

EDUCATIONAL PROGRAM

The SCIM Fellowship educational program includes a weekly journal club, SCIM didactics, and research methodology training. Fellows have the opportunity for hands on training in intrathecal pump management for spasticity, from screening trials to refilling procedures, and troubleshooting; urodynamics; Nerve and muscle blocks with neurotoxins, and diaphragm pacer programming and management; ventilator management; and excisional wound debridements.

Fellows can engage in the community outreach program, including adaptive swimming and life challenges for individuals with SCI. Fellows are expected to participate in the education of residents and staff through lectures and teaching and develop a quality improvement project. Fellows are also expected to participate in research and to prepare a scholarly work during educational and research protected time.

OUR MISSION

The mission of the Department of Rehabilitation and Human Performance is to provide service for those with disability with the goal of improving function and maximizing human performance and life quality. This mission will be carried out through service, education, research, innovation, and leadership.

The Department of Rehabilitation and Human Performance of the Icahn School of Medicine at Mount Sinai (ISMMS) and the Mount Sinai Health System is one of the leading rehabilitation medicine programs in the United States.

The Spinal Cord Injury Fellowship at the Icahn School of Medicine at Mount Sinai is sponsored by the Craig H. Neilsen Foundation (Grant #1145693).

Our one-year clinical SCI Fellowship Training Program has been accredited by the ACGME for over 20 years and is directed by Dr. Thomas Bryce.

The SCIM Program at Mount Sinai is world renown. It has been a federally funded Model System for Spinal Cord Injury for over 30 years.

Applicants must have successfully completed an ACGME accredited residency in PM&R, neurology, internal medicine, or psychiatry.

Fellows receive comprehensive training in the management of both traumatic and non-traumatic SCI by rotating through inpatient and outpatient facilities at Mount Sinai and at the Bronx VAMC.

Each fellow manages their own outpatient panel, serving as the primary medical contact for patients. Additionally, fellows are expected to complete a scholarly project related to SCI.

Fellows are prepared to sit for the American Board of Physical Medicine and Rehabilitation (ABPMR) subspecialty examination in SCIM.
