

Icahn School of Medicine at  
**Mount Sinai**

Grants and Contracts Office

**Funding Opportunities Monthly Edition  
June 2026 Due Dates**

## Introduction

This funding opportunity packet contains information on funding opportunities with deadlines in June 2026.

The opportunities are organized in the following order:

1. [National Institutes of Health \(NIH\)](#)
2. [National Science Foundation \(NSF\)](#)
3. [Other Federal](#)
4. [Non Federal](#)

The Development Office offers assistance with many not for profit opportunities. Please contact the Development Office's Corporate and Foundation Relations team at [DevCorpFound@mountsinai.org](mailto:DevCorpFound@mountsinai.org) / 212-659-8500 below for assistance or questions.

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
128676	<a href="#">Exploratory Grants in Cancer Control (R21 Clinical Trial Optional)</a>	National Cancer Institute/NIH/DHHS	PA-25-253	16-Jun-2026	275,000 USD
	Contact Name	Mukesh Verma, Ph.D.

	Deadline Dates (ALL)	16-Jun-2026 , 07-Sep-2026 , 16-Oct-2026 , 07-Jan-2027 , 16-Jun-2027 , 07-Sep-2027 , 16-Oct-2027 , 07-Jan-2028 , 16-Feb-2028 , 07-May-2028 , 16-Jun-2028 , 07-Sep-2028			
	Synopsis	Through this Notice of Funding Opportunity (NOFO), the National Cancer Institute (NCI) encourages the submission of exploratory/developmental research grant (R21) applications that focus on different aspects of cancer control by modifying behavior, screening, and understanding etiologic factors contributing to the development of cancer, and developing ways to control cancer. The overarching goal is to provide support to promote the early and conceptual stages of research efforts on novel scientific ideas that have the potential to substantially advance population-based cancer research, such as the development of novel techniques, agents, methodologies, models, or applications that could have a major impact on a field of cancer research (e.g. epidemiologic, biomedical, behavioral, health care delivery or clinical).			
128595	<a href="#">Cancer Prevention and Control Clinical Trials Planning Grant Program (U34 Clinical Trials Optional)</a>	National Cancer Institute/NIH/DHHS	PAR-25-103	25-Jun-2026	Not Specified

Deadline Dates (ALL)	04-Jun-2026 , 10-Sep-2026 , 04-Feb-2027 , 04-Jun-2027 , 10-Sep-2027
Synopsis	<p>Through this Notice of Funding Opportunity (NOFO), the National Cancer Institute (NCI) intends to support extramural research to investigate and mitigate challenges in clinical assay development and subsequent analytical validation due to preanalytical variability in tumor tissue biopsies, blood biospecimens utilized as "liquid biopsies", or other biospecimens as described in this NOFO. Extramural research funded under this NOFO may include investigations of preanalytical variability associated with the procurement and study of small biopsies (core biopsies, small excision samples), blood utilized for "liquid biopsies", tissue swabs, tissue secretions, pleural and esophageal aspirates, feces, or bodily fluids like sweat, urine, CSF, breast milk and saliva. Investigator-designed experiments will explore how different biospecimen preanalytical conditions affect emerging and clinically relevant biomarkers quantified by a variety of testing platforms. The results from this research program will improve the understanding of how analytical quantification of clinically relevant biomarkers is affected by variation in biospecimen collection, processing, and storage procedures. The overall goal is to expedite biomarker clinical assay development through evidence-based standardization of biopsy handling practices.</p>

120973	<a href="#">Mechanisms that Impact Cancer Risk with Use of Incretin Mimetics (R01 Clinical Trial Optional)</a>	National Cancer Institute/NIH/DHHS	PAR-25-069	05-Jun-2026	Not Specified

Deadline Dates (ALL)	05-Jun-2026 , 05-Oct-2026
Synopsis	<p>Through this notice of funding opportunity (NOFO), the National Cancer Institute (NCI) invites applications for investigator-initiated studies addressing mechanisms by which incretin mimetics, specifically glucagon-like peptide (GLP)-1 or dual GLP-1/</p>

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
	<p>glucose?dependent insulintropic polypeptide (GIP)-1 receptor agonists (RAs), impact cancer risk. The focus on these agents is due to their reported effects on thyroid, prostate and other cancer risks, and the generally more favorable efficacy and side effect profile compared to other classes of incretin mimetics. In addition, this NOFO seeks to draw in talented scientists to the cancer biology field who may study incretin mimetic effects on diseases other than cancer. Investigators wishing to study incretin mimetics other than GLP-1 RAs or GLP-1/GIP-1 RAs, such as dipeptidyl peptidase (DPP)-4 inhibitors, must justify why the agent(s) they propose to study are more effective and/or have a more favorable side effect profile than GLP-1 or GLP-1/GIP-1 RAs. Route of agent administration (oral vs. other) is, by itself, not an adequate justification.</p>				
120897	<a href="#">Research Projects to Enhance Applicability of Mammalian Models for Translational Research (R01 Clinical Trial Not Allowed)</a>	National Cancer Institute/NIH/DHHS	PAR-24-306	05-Jun-2026	2,495,000 USD
	<p>Contact Name: Joanna Watson, Ph.D.            Contact Telephone: 240-276-6206            Contact Email: <a href="mailto:Joanna.Watson@nih.gov">Joanna.Watson@nih.gov</a>            Sponsor Website:            Program URL: <a href="#">Link to program URL</a>            Deadline Dates (ALL): 05-Jun-2026</p> <p>Synopsis: Through this Notice of Funding Opportunity (NOFO), the National Cancer Institute (NCI) invites applications for projects to expand, improve, or transform the utility of mammalian cancer and tumor models for translational research. The NCI, through this NOFO, encourages submission of projects devoted to demonstrating that mammalian models, including organoids, tumoroids and cell models, used for translational research are robust representations of human biology, are appropriate to test questions of clinical importance, and provide reliable information for patient benefit. These practical goals contrast with the goals of many mechanistic, NCI-supported R01 projects that use mammals, or develop and use mammalian cancer models, transplantation tumor models, or models derived from mammalian or human tissues or cells for hypothesis-testing, non-clinical research. Among many other possible endeavors, applicants in response to this NOFO could propose demonstrations of how to overcome translational deficiencies of mammalian oncology models, define new uses of mammalian models or their genetics for unexplored translational challenges, advance standard practices for use of translational models, test approaches to validate and credential models, or challenge current practices for how models are used translationally.</p>				
128654	<a href="#">Modular R01s in Cancer Control and Population Sciences (R01 Clinical Trial Optional)</a>	National Cancer Institute/NIH/DHHS	PA-25-172	05-Jun-2026	1,250,000 USD

## NIH Funding Opportunities

This NOFO supports basic, translational, and clinical research projects that seek to identify the mechanisms of therapy-induced adverse sequelae, clinically characterize the adverse sequelae, and translate the mechanistic understanding into therapeutic approaches to prevent or minimize the development of long-term sequelae. The scope of research projects includes mechanistic studies with translational endpoints and longitudinal clinical phenotyping to identify and validate clinical endpoints (biomarkers, imaging, patient-reported outcomes or combined elements) for future use in clinical trials that will evaluate the efficacy of interventions designed to prevent or reduce specific adverse sequelae. This Notice of Funding</p>

	Synopsis	<p>Through this Notice of Funding Opportunity (NOFO), the National Cancer Institute (NCI) invites research grant applications (R01) for the development and application of current and emerging molecular imaging methods to gain fundamental insights into cancer inflammation in vivo. The motivation for this initiative is the recognition that much of the current imaging research on inflammation in cancer relies heavily on in vitro and ex vivo methods. These approaches have limited potential to provide significant insights into the dynamic interactions between cancer and inflammation. Utilizing molecular imaging probes in pre-clinical and clinical investigations allows for precise temporal resolution at molecular and cellular levels. This information is valuable for identifying and characterizing in vivo inflammatory cellular physiology in cancer and for detecting molecular changes in response to treatment. This NOFO encourages applications focused on developing integrated imaging approaches to investigate the role of inflammation in cancer through strong cross-discipline collaboration between cancer basic science researchers and imaging scientists. These collaborations are expected to advance the science and understanding of cancer inflammation interactions.</p>

128497	<a href="#">Dissemination and Implementation Research in Health (R01 Clinical Trial Optional)</a>	National Cancer Institute/NIH/DHHS	PAR-25-144	07-May-2026	Not Specified
	<p>Contact Name Gila Neta, Ph.D.</p> <p>Contact Telephone 240-276-6785</p> <p>Contact Email <a href="mailto:gila.neta@nih.gov">gila.neta@nih.gov</a></p> <p>Sponsor Website</p> <p>Program URL <a href="#">Link to program URL</a></p> <p>Deadline Dates (ALL) 07-May-2026 , 05-Jun-2026 , 07-Sep-2026 , 05-Oct-2026 , 07-Jan-2027 , 05-Feb-2027 , 07-May-2027 , 05-Jun-2027 , 07-Sep-2027 , 05-Oct-2027 , 07-Jan-2028</p> <p>Synopsis The purpose of this Notice of Funding Opportunity (NOFO) is to support studies that will identify, develop, and/or test strategies for overcoming barriers to the adoption, adaptation, integration, sustainability, scale-up, and spread of evidence-based interventions, practices, programs, tools, treatments, guidelines, and policies (herein referred to collectively as evidence-based interventions). Studies that promote equitable dissemination and implementation of evidence-based interventions among underrepresented communities are encouraged. Conversely, there is a benefit in understanding circumstances that create a need to stop or reduce (de-implement) the use of practices that are ineffective, unproven, low-value, or harmful. In addition, studies to advance dissemination and implementation research methods and measures are encouraged. Applications that focus on re-implementation of evidence-based health services that may be disrupted amidst disasters (e.g., pandemics, climate change) remain relevant.</p>

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
---------	---------------	--------------	----------------	---------------	----------------

institutes. This FOA specifies a partnership structure that is expected to help bridge gaps in knowledge and experience by engaging the strengths of academic, industrial, and other investigators. The partners on each application should establish an inter-disciplinary, multi-institutional research team to work in strategic alliance to implement a coherent strategy to develop and translate a solution to their chosen problem. They are expected to plan, design, and validate that the solution will be suitable for end users. Each partnership should include at least one academic and one industrial organization. Each partnership should plan to transition a technology, method, assay, device, and/or system from a demonstration of possibility to a status useful in the chosen setting. Funding may be requested to enhance, adapt, optimize, validate, and otherwise translate technologies that address problems in biology, pathology, risk assessment, diagnosis, treatment, and/or monitoring of disease status. This FOA defines "innovation" as likelihood to deliver a new capability to end users. This FOA will support clinical trials that test functionality or validate performance in the chosen setting. This FOA is not intended to support straight clinical trials that lack translation as the primary motivation. Applications that propose phase III clinical trials in any area of cancer research are not sought by and will not be supported through this FOA. This FOA does not propose to support commercial production or basic research projects.

Synopsis | Through this Notice of Funding Opportunity (NOFO), the National Cancer Institute (NCI) is soliciting research projects that implement early phase (Phase 0, I, and II) investigator-initiated clinical trials focused on cancer-targeted diagnostic and therapeutic interventions of direct relevance to the research mission of DCTD and OHAM. The proposed project must involve at least 1 clinical trial related to the scientific interests of one or more of the following research programs: Cancer Therapy Evaluation Program, Cancer Imaging Program, Cancer Diagnosis Program, Radiation Research Program, Complementary and Alternative Medicine Program and/or the HIV and AIDS Malignancies Research Programs. Applicants may propose to conduct an early phase trial by itself, or in combination with another research aim(s) as appropriate. This NOFO does not accept Phase III clinical trials.

the unique biorepository resources of the NCI-sponsored Prostate, Lung, Colorectal, and Ovarian Cancer (PLCO) Screening Trial. The PLCO Biorepository offers high-quality, prospectively collected, serial pre-diagnostic blood samples from the PLCO screened arm participants, and a onetime collection of buccal cells from both the screened and the control arm participants. Available data associated with the biospecimens includes demographic, diet, lifestyle, smoking, screening results, and other clinical data. This FOA supports a wide range of cancer research including, but not limited to, biochemical and genetic analyses of cancer risk, as well as discovery and validation of early detection biomarkers. The proposed research project must involve use of PLCO biospecimens and may include other resources; additionally, it should also take advantage of the unique characteristics of the PLCO biospecimens. Research on non-cancer outcomes, especially those related to aging (e.g., Alzheimer’s, depression, hip fracture, osteoporosis and rheumatoid arthritis) may also be supported. Research projects that do not involve the use of PLCO biospecimens will not be supported under this FOA.

Synopsis | Through this Notice of Funding Opportunity (NOFO), the National Cancer Institute (NCI) intends to stimulate research in discovery and development of novel, small molecules for cancer. Molecules discovered through this NOFO may be used to probe cancer biology, to validate cancer targets, or as the basis for optimized drugs. Stages of discovery research covered by this NOFO include: 1) development of the primary screen assay(s) and testing in an initial pilot screen; 2) primary screen implementation to identify initial screening hits (high throughput target-focused screens, or moderate throughput screens); 3) hit validation using a series of assays and initial medicinal chemistry inspection to prioritize the hit set.

Synopsis | The goal of the NCI Pathway to Independence Award (K99/R00) program is to facilitate a timely transition of talented postdoctoral researchers with a research and/or clinical doctorate degree from mentored, postdoctoral research positions to independent, tenure-track or equivalent faculty positions. The program will provide independent NIH research support during this transition in order to help awardees to launch competitive, independent research careers. This Notice of Funding Opportunity (NOFO) is designed specifically for applicants proposing to serve as the lead investigator of an independent clinical trial, a clinical trial feasibility study, or a separate ancillary study to an existing trial, as part of their research and career development. Applicants not planning an independent clinical trial, or proposing to gain research experience in a clinical trial led by another investigator, must apply to companion NOFO (PAR-25-135 ).

122281	<a href="#">Assay Validation of High Quality Markers for Clinical Studies in Cancer (UH2/UH3 Clinical Trial Not Allowed)</a>	National Cancer Institute/NIH/DHHS	PAR-25-074	10-Jun-2026	Not Specified
	<p>Contact Name Tracy G. Lively, Ph.D.</p> <p>Contact Telephone 240-276-5944</p> <p>Contact Email <a href="mailto:livelyt@mail.nih.gov">livelyt@mail.nih.gov</a></p> <p>Sponsor Website</p> <p>Program URL <a href="#">Link to program URL</a></p> <p>Deadline Dates (ALL) 10-Jun-2026 , 14-Oct-2026</p> <p>Synopsis Through this Notice of Funding Opportunity (NOFO), the National Cancer Institute (NCI) invites applications to support the validation of molecular/cellular/imaging markers (referred to as "markers" or "biomarkers") and assays for cancer detection, diagnosis, prognosis, monitoring, and prediction of response or resistance to treatment, as well as markers for cancer prevention and control. This NOFO will support investigator-initiated research for both analytical, and clinical validation of assays to be used in cancer treatment, control, or prevention trials supported by the NCI. This NOFO will also support the validation of pharmacodynamic markers and markers of toxicity. Applicants should have assays that work on human samples and whose importance is well justified for development into clinical assays. As chemotherapies and/or radiation therapies are increasingly combined with immunotherapies to enhance durability of anti-cancer responses, assays for measuring multiple markers, including immune markers, can be developed and validated simultaneously. The UH2 phase of this NOFO supports analytical validation of assays for these molecular/cellular/imaging markers, which must be achieved within 2 years before assays may undergo clinical validation. The UH3 phase of this NOFO supports clinical validation of analytically validated assays for up to 3 years using well-annotated biospecimens from retrospective or prospective clinical trials or studies. This NOFO may be used to validate existing assays for use in other cancer clinical trials, observational studies, or population studies. Efforts to harmonize clinical laboratory tests, including investigation into the performance and reproducibility of assays across multiple clinical laboratories, are also appropriate for this funding opportunity. Projects proposed for this NOFO will require multi-</p>

 Deadline Dates (ALL) 10-Jun-2026 , 14-Oct-2026

Synopsis Through this Notice of Funding Opportunity (NOFO), the National Cancer Institute (NCI) intends to accelerate the adoption and validation of molecular/cellular/imaging markers (referred to as "markers" or "biomarkers") and assays for cancer detection, diagnosis, prognosis, monitoring, and prediction of response or resistance to treatment, as well as markers for cancer prevention and control. This NOFO will also support the validation of pharmacodynamic markers and markers of toxicity. Applicants to this NOFO must have an assay(s) whose performance has been analytically validated in specimens similar to those for the intended clinical use of the marker(s) and assay(s). As chemotherapies and/or radiation therapies are increasingly combined with immunotherapies to enhance the durability of anti-cancer responses, assays for measuring multiple markers, including immune markers, can be developed and validated simultaneously. The UH3 mechanism will support the clinical validation of established assays for up to 3 years using specimens from retrospective or prospective clinical trials or studies. This NOFO may be used to validate existing assays for use in other trials, observational studies, or population studies. Efforts to harmonize clinical laboratory tests, including investigation into the performance and reproducibility of assays across multiple clinical laboratories, are also appropriate for this funding opportunity. Projects proposed for this NOFO will require multidisciplinary interaction and collaboration among scientific investigators, oncologists, statisticians, and clinical laboratory scientists. This NOFO is not intended to support early-stage development of technology or the conduct of clinical trials but is intended for validation of assays to the point where they could be integrated into clinical trials/studies as investigational assays.

data sciences are especially encouraged to work with their institutions to apply. This Notice of Funding Opportunity (NOFO) is designed specifically for candidates proposing to serve as the lead investigator of an independent clinical trial, a clinical trial feasibility study, or a separate ancillary clinical trial, as part of their research and career development. Those not planning an independent clinical trial, or proposing to gain research experience in a clinical trial led by another investigator, must apply to companion NOFO (PAR-23-286). This Notice of Funding Opportunity is for basic science experimental studies involving humans, referred to in NOT-OD-18-212 as “prospective basic science studies involving human participants.” These studies fall within the NIH definition of a clinical trial and also meet the definition of basic research. Types of studies that should be submitted under this NOFO include studies that prospectively assign human participants to conditions (i.e., experimentally manipulate independent variables) and that assess biomedical or behavioral outcomes in humans for the purpose of understanding the fundamental aspects of phenomena without specific application towards processes or products in mind. Applicants not planning an independent clinical trial or basic experimental study with humans, or proposing to gain research experience in a clinical trial or basic experimental study with humans led by another investigator, must apply to the 'Independent Clinical Trial Not Allowed' companion NOFO. The proposed project must be related to the programmatic interests of one or more of the participating NIH Institutes and Centers (ICs) based on their scientific missions.

	evidence-based interventions). Studies that promote equitable dissemination and implementation of evidence-based interventions among underrepresented communities are encouraged. Conversely, there is a benefit in understanding circumstances that create a need to stop or reduce (de-implement) the use of practices that are ineffective, unproven, low-value, or harmful. In addition, studies to advance dissemination and implementation research methods and measures are encouraged. Applications that focus on re-implementation of evidence-based health services that may be disrupted amidst disasters (e.g., pandemics, climate change) remain relevant. All applications must be within the scope of the mission of one of the Institutes/Centers listed above. This Notice of Funding Opportunity (NOFO) requires a Plan for Enhancing Diverse Perspectives (PEDP).

Deadline Dates (ALL)	23-May-2026 [Optional][LOI/Pre-App], 22-Jun-2026 , 14-Jul-2026
Synopsis	<p>This notice of funding opportunity (NOFO) encourages applications for investigator-initiated multisite clinical trials (e.g., efficacy, effectiveness, or pragmatic trials) to study the effects of complementary and integrative health approaches with physical and/or psychological therapeutic inputs (often called mind and body interventions), and/or multicomponent interventions that include physical, psychological, and/or nutritional approaches in NCCIH-designated areas of high research priority. Clinical coordinating centers (CCC) should develop and implement the proposed fully powered multisite clinical trial (Phase III and beyond). The objective of a CCC application is to present the scientific rationale and a comprehensive scientific and operational plan for the clinical trial. CCC applications are expected to describe plans for project management, participant recruitment and retention strategies, performance milestones, scientific conduct, and dissemination of results. CCC applications submitted under this NOFO will utilize a two-phase, milestone-driven cooperative agreement (UG3/UH3) funding mechanism. In addition, an accompanying data coordinating center (DCC) application (U24), submitted under PAR-24-087 and proposing a data analysis and data management plan for the clinical project, is required. Both a CCC application and a corresponding DCC application need to be submitted simultaneously for consideration by NCCIH. For additional information about the mission, strategic vision, and research priorities of NCCIH, applicants are encouraged to consult the NCCIH website (<a href="https://nccih.nih.gov/about/plans">https://nccih.nih.gov/about/plans</a>). Applicants are encouraged to contact the appropriate Scientific/Research Contact for the area of science for which they are planning to develop an application prior to submitting to this NOFO. This Notice of Funding Opportunity (NOFO) requires a Plan for Enhancing Diverse Perspectives (PEDP).</p>

Synopsis | This Notice of Funding Opportunity (NOFO) encourages applications for investigator-initiated fully remotely delivered and conducted clinical trials to assess the efficacy or effectiveness of complementary and integrative health interventions in NCCIH-designated areas of high research priority. Applications submitted under this NOFO are expected to propose a remotely delivered and conducted fully powered clinical trial with no in-person contact between research staff and study participants and may utilize mHealth tools or technologies. Applicants must provide justification for the remotely delivered approach and provide preliminary data on the feasibility and safety of the approach, along with evidence that the intervention has promise of clinical benefit. Applicants are encouraged to contact the appropriate NCCIH Scientific/Research contact for the area of science for which they are planning to develop an application prior to submitting to this NOFO. This NOFO requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation. Applications that fail to include a PEDP will be considered incomplete and will be withdrawn. Applicants are

Deadline Dates (ALL)	22-Jun-2026 , 14-Jul-2026 , 20-Oct-2026 , 17-Nov-2026

Synopsis | This notice of funding opportunity (NOFO) invites applications for investigator-initiated clinical trials of complementary and integrative health approaches with physical and/or psychological therapeutic inputs (often called mind and body interventions) in NCCIH-designated areas of high research priority. Applications submitted under this NOFO are expected to propose a multisite feasibility clinical trial that will provide new information that is scientifically necessary for the planning and conduct of a subsequent clinical efficacy or effectiveness study, pragmatic trial, or dissemination and implementation trial within NCCIH's mission. NCCIH expects that applications to this NOFO will describe the planned future clinical trial and in so doing demonstrate that the proposed (R01) research is scientifically necessary to design or plan the subsequent fully powered, full-scale clinical trial. Under this R01, the data collected should be used to fill gaps in scientific knowledge, including, but not limited to the following: assessing whether the intervention can be delivered with fidelity across sites; demonstrating feasibility of recruitment, accrual, and randomization of participants across sites; demonstrating participant adherence to the intervention, as well as retention of participants throughout the study across sites; refining and assessing the feasibility of protocolized multimodal interventions, and/or demonstrating feasibility of data collection across sites in preparation for a future fully powered, multisite efficacy or effectiveness trial. The need for multisite feasibility trials is expected to be justified by sufficient preliminary data from previous single site feasibility or acceptability trial(s) or the published literature. The data collected should be used to fill gaps in scientific knowledge and be necessary to develop a competitive fully powered multisite clinical trial that has the potential to make a significant impact on public health. Prior to submitting to this NOFO, applicants are encouraged to contact the appropriate NCCIH Scientific/Research contact person for the science area of the planned application. This NOFO requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation. Applications that fail to include a PEDP will be considered incomplete and will be withdrawn. Applicants are strongly encouraged to read the NOFO instructions carefully and view the available PEDP guidance material.

123152	<a href="#">Feasibility Clinical Trials of Mind and Body Interventions for NCCIH High Priority Research Topics (R34 Clinical Trial Required)</a>	National Center for Complementary and Integrative Health/NIH/DHHS	PAR-25-274	22-Jun-2026	450,000 USD
	<p>Contact Name Jennifer N. Baumgartner, Ph.D.</p> <p>Contact Telephone 301-402-4084</p> <p>Contact Email <a href="mailto:jennifer.baumgartner@nih.gov">jennifer.baumgartner@nih.gov</a></p> <p>Sponsor Website</p> <p>Program URL <a href="#">Link to program URL</a></p> <p>Deadline Dates (ALL) 22-Jun-2026 , 13-Jul-2026 , 20-Oct-2026 , 17-Nov-2026</p> <p>Synopsis</p>	<p>The goal of this notice of funding opportunity (NOFO) is to support feasibility trials of complementary and integrative health approaches with physical and/or psychological therapeutic inputs (often called mind and body interventions) for conditions that have been identified by NCCIH as high-priority research topics. This funding opportunity is intended to support feasibility clinical trials that provide new information that are scientifically necessary for the planning and conduct of a subsequent clinical efficacy or effectiveness study, pragmatic trial, or dissemination and implementation trial within NCCIH’s mission. NCCIH expects that applications to this NOFO will describe the planned future clinical trial and in so doing demonstrate that the proposed (R34) research is scientifically necessary to design or plan the subsequent competitive full-scale clinical trial. Under this R34, the data collected should be used to fill gaps in scientific knowledge necessary to develop a competitive full-scale clinical trial, including, but not limited to the following: examining feasibility and acceptability of interventions lacking published data; tailoring or adapting the content or structure of an intervention to a specific population, modality, or setting; refining the intervention to determine the most appropriate frequency or duration; determining feasibility of recruitment, retention, and data collection procedures; refining and assessing the feasibility of protocolized multi-component interventions; or examining acceptability and adherence of control conditions. The subsequent full-scale clinical trial should have the potential to make a significant impact on public health. Prior to submitting to this NOFO, applicants are encouraged to contact the appropriate NCCIH Scientific/Research contact person for the science area of the planned application. This NOFO requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation. Applications that fail to include a PEDP will be considered incomplete and will be withdrawn. Applicants are strongly encouraged to read the NOFO instructions carefully and view the available PEDP guidance material.</p>

Synopsis This notice of funding opportunity (NOFO), utilizing the U24 grant funding mechanism, encourages applications for a collaborating data coordinating center (DCC) application that accompanies an investigator-initiated multi-site clinical trial (Phase III and beyond) application submitted under companion PAR-24-275. The DCC application must be specific to the companion clinical coordinating center (CCC) application. The objective of the DCC application is to propose a comprehensive plan that provides overall project coordination, and administrative, data management, and biostatistical support for the proposed clinical trial. Both a DCC application and a corresponding CCC application need to be submitted simultaneously for consideration by NCCIH. Trials for which this NOFO applies must be relevant to the research mission of NCCIH and considered a high priority by the Center. For additional information about the mission, strategic vision, and research priorities of NCCIH, applicants are encouraged to consult the NCCIH website (<https://www.nccih.nih.gov>). Applicants are encouraged to contact the appropriate Scientific/Research Contact for the area of science for which they are planning to develop an application prior to submitting to this NOFO. This Notice of Funding Opportunity (NOFO) requires a Plan for Enhancing Diverse Perspectives (PEDP).

		<p>detailed information regarding the study rationale, design, analytic techniques, protocols and procedures, facilities and environment, organizational structure, and collaborative arrangements. This information is best conveyed in a Manual of Procedures (MOP), the development of which represents a costly and time-consuming activity. This clinical research planning grant funding opportunity supports applicants in their planning efforts to conduct collaborative clinical research. The grant may be used to support the development of a MOP, as well as to conduct preliminary studies to refine study procedures or document recruitment potential. The grant must not be used to generate data on the effects of a proposed intervention. This NEI FOA is applicable to both epidemiologic and clinical trial research studies.</p>			
129611	<a href="#">NEI Research Grant for Vision-Related Secondary Data Analysis (R21 Clinical Trial Not Allowed)</a>	National Eye Institute/NIH/DHHS	PAR-25-357	07-May-2026	275,000 USD

	Synopsis	<p>The purpose of this Notice of Funding Opportunity (NOFO) is to conduct secondary data analyses using existing data collected from humans participating in vision-related clinical trials, epidemiologic, and other clinical research studies or represented in clinical and health care database resources (e.g., electronic health records). This NOFO may be used to develop new statistical methodologies or test hypotheses using existing data, but this NOFO must not be used to support the collection of new data. This NOFO encourages applications from institutions/organizations that propose to conduct vision-related secondary analyses of data collected from humans. Applications may be related to, but must be distinct from, the specific aims of the original data collection. The NEI supports an extensive portfolio of clinical trials and large-scale epidemiologic research projects wherein numerous data collection activities are required to meet each project's specific aims. The resultant wealth of data generated by these studies often provides unique, cost-effective opportunities to investigate additional research questions or develop new analytical approaches secondary to a project's originally intended purpose. Data are not limited to those collected under NEI support, but such data are of the highest programmatic interest.</p>

Synopsis | The purpose of this Notice of Funding Opportunity (NOFO) is to encourage institutions to propose creative and innovative institutional research career development programs which will prepare clinically trained vision scientists for independent research careers. This NOFO is intended to expand and strengthen the community of clinician investigators engaged in vision research. This Notice of Funding Opportunity (NOFO) allows appointment of Scholars proposing to serve as the lead investigator of an independent clinical trial; or proposing a separate ancillary clinical trial; or proposing to gain research experience in a clinical trial led by another investigator, as part of their research and career development program. For this career development program scholars are limited to clinical trials that are minimal risk. The existing clinical trial must be a NIH-defined clinical trial that fulfills the NIH requirement for minimal risk trial. A minimal risk trial is one in which the probability and magnitude of harm or discomfort anticipated in the research are not greater in and of themselves than those ordinarily encountered in daily life or during the performance of routine physical or psychological examinations or tests. Applicants are strongly advised to consult with NEI program staff prior to submitting an application with human subjects to determine the appropriate funding opportunity. For the purposes of this announcement, institutions are highly encouraged to recruit prospective PIs/PDs, mentors, and scholars from diverse backgrounds, including individuals from underrepresented racial and ethnic groups and individuals with disabilities as described in the NOT-OD-22-019 in all of its programs.

Synopsis

This Notice of Funding Opportunity (NOFO) supports studies that are both necessary and sufficient to inform the planning of a Phase II-IV clinical trial within NHLBI's mission. The NHLBI expects that applications to this NOFO will describe the planned clinical trial and in so doing demonstrate that the proposed (R34) research is scientifically necessary to design or plan the subsequent trial. Furthermore, this NOFO will support research projects that are designed to provide results that will be sufficient to inform the future trial without further studies. The planned Phase II, III, or IV trial must be primarily intended to test the efficacy, safety, clinical management, or implementation of intervention(s) in the prevention and/or treatment of heart, lung, blood, or sleep disorders. In contrast to the study start up or preparation phase of NHLBI funding opportunities for clinical trials (as described at Clinical Trial Development Continuum | NHLBI, NIH), the R34 mechanism is intended to provide new information that answers a scientific or operational question(s) which may be pragmatic in nature and, therefore, informs the final development of a Phase II-IV clinical trial. Regardless of the results of the R34, support of the proposed future clinical trial will require a new application. Plan for Enhancing Diverse Perspectives The NIH recognizes that diverse teams working together and capitalizing on innovative ideas and distinct perspectives outperform homogeneous teams. There are many benefits that flow from a diverse scientific workforce, including: fostering scientific innovation, enhancing global competitiveness, contributing to robust learning environments, improving the quality of the research, advancing the likelihood that underserved populations participate in, and benefit from research, and enhancing public trust. To support the best science, the NIH encourages inclusivity in research. Examples of structures that promote diverse perspectives include but are not limited to: -Transdisciplinary research projects and collaborations among neuroscientists and researchers from fields such as computational biology, physics, engineering, mathematics, computer and data sciences, as well as bioethics. - Engagement from different types of institutions and organizations (e.g., research-intensive, undergraduate-focused, minority-serving, community-based). - Individual applications and partnerships that enhance geographic and regional heterogeneity. - Investigators and teams composed of researchers at different career stages. - Participation of individuals from diverse backgrounds, including groups historically underrepresented in the biomedical, behavioral, and clinical research workforce (see NOT-OD-20-031), such as underrepresented racial and ethnic groups, those with disabilities, those from disadvantaged backgrounds, and women. - Opportunities to enhance the research environment to benefit early- and mid-career investigators. This NOFO requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation. Applications that fail to include a PEDP will be considered incomplete and will

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
---------	---------------	--------------	----------------	---------------	----------------

be withdrawn. Applicants are strongly encouraged to read the NOFO instructions carefully and view the available PEDP guidance material.

Synopsis | The purpose of the NHLBI Career Transition Award (K22) program is to provide highly qualified postdoctoral fellows and other doctoral-level researchers currently in training in the NHLBI Division of Intramural Research with the opportunity to transition their research programs to extramural institutions as junior investigators. To achieve these objectives, the NHLBI Career Transition Award will support two phases of research: a mentored intramural phase (up to two years) and an extramural phase (three years), for a total of five years of combined support. Transition from the intramural phase of support to the extramural phase is not automatic. Approval of the transition will be based on the success of the awardee's research program during the mentored phase as determined by an NHLBI progress review, which will include an evaluation of a research plan to be carried out at the extramural institution. This Funding Opportunity Announcement (FOA) is designed specifically for candidates proposing research that does not involve leading an independent clinical trial, a clinical trial feasibility study, or an ancillary study to a clinical trial. Applicants to this FOA are permitted to propose research experience in a clinical trial led by a mentor or co-mentor. Those proposing a clinical trial or an ancillary clinical trial as lead investigator, should apply to the companion FOA, PAR-24-211 "NHLBI Career Transition Award for Intramural Postdoctoral Fellows and Research Trainees (K22- Clinical Trial Required)".

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
	<p>Contact Email <a href="mailto:direducation@nhlbi.nih.gov">direducation@nhlbi.nih.gov</a></p> <p>Sponsor Website</p> <p>Program URL <a href="#">Link to program URL</a></p> <p>Deadline Dates (ALL) 12-Jun-2026 , 12-Oct-2026 , 12-Feb-2027 , 12-Jun-2027</p> <p>Synopsis The purpose of the NHLBI Career Transition Award (K22) program is to provide highly qualified postdoctoral fellows and other doctoral-level researchers currently in training in the NHLBI Division of Intramural Research with the opportunity to transition their research programs to extramural institutions as junior investigators. To achieve these objectives, the NHLBI Career Transition Award will support two phases of research: a mentored intramural phase (up to two years) and an extramural phase (three years), for a total of five years of combined support. Transition from the intramural phase of support to the extramural phase is not automatic. Approval of the transition will be based on the success of the awardee's research program during the mentored phase as determined by an NHLBI progress review, which will include an evaluation of a research plan to be carried out at the extramural institution. This Notice of Funding Opportunity Announcement (NOFO) is designed specifically for applicants proposing to serve as the lead investigator of an independent clinical trial, a clinical trial feasibility study, or a separate ancillary study to an existing trial, as part of their research and career development. Applicants not proposing to serve as lead investigator of an independent clinical trial must apply to the companion NOFO, PAR-24-209.</p>

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
	Synopsis	<p>2027 , 23-Dec-2027</p> <p>This Funding Opportunity Announcement (FOA) solicits grant applications to further develop enabling technologies and transformative platforms to catalyze next-generation predictive, diagnostic and therapeutic products to address heart, lung, blood, and sleep (HLBS)-related disorders and diseases. This FOA solicits R33 applications where major feasibility gaps for the enabling technology or transformative platform have already been overcome, as demonstrated with supportive preliminary data, but still requires further development and rigorous validation to encourage downstream demonstration, utilization and adoption. Well-suited applications must offer the potential to accelerate and/or transform the areas of early detection and screening, model development, clinical diagnosis, treatment, control, prevention or epidemiology, while addressing issues associated with HLBS-related diseases and disorders. Projects proposing application of existing technologies where the novelty resides in the biological or clinical target/question being pursued are not appropriate for this solicitation. Applications considered nonresponsive to the FOA will not be reviewed. This FOA is part of a suite of Catalyze innovation grants to advance projects to the point where they can meet the entry criteria for the NHLBI Catalyze Product Definition or Preclinical FOAs.</p>			
121563	<a href="#">Developing Novel Theory and Methods for Understanding the Genetic Architecture of Complex Human Traits (R01 Clinical Trial Not Allowed)</a>	National Human Genome Research Institute/NIH/DHHS	PAR-25-255	05-Jun-2026	Not Specified

	Deadline Dates (ALL)	05-Jun-2026 , 05-Oct-2026			
	Synopsis	<p>The goal of this NOFO is to support applications for novel theory and methods development that enable better understanding of how genetic and non-genetic factors contribute to complex trait variation across individuals, families, and populations. Approaches should be interdisciplinary drawing from the natural and social sciences, account for interdependencies across scales of biological, social, and ecological organization, and make extensive use of theory, modeling, and validation with available large-scale datasets. This Notice of Funding Opportunity (NOFO) requires a Plan for Enhancing Diverse Perspectives (PEDP).</p>

The National Institute of Allergy and Infectious Diseases (NIAID) of the National Institutes of Health (NIH) plans, sponsors, and directs extramural research programs involving evaluation of the safety and efficacy of vaccines, therapeutics, and prevention modalities. Through these programs, clinical trials at more than 145 clinical research sites are supported. NIAID is required to provide oversight and management of investigational study product for clinical trials to ensure compliance with all applicable regulations, including Title 21 Code of Federal Regulations (CFR) Part 312 and Human Subjects Protection Title 45 CFR Part 46. Investigational study product management includes the receipt, storage, handling, and distribution of investigational product. These activities are mission critical functions and high priority in ensuring the integrity of study products used in human clinical trials. The Clinical Research Products Management Center contract was initially awarded in 1988. The current contract number 75N93020C00032 is with Fisher BioServices, Inc., Rockville, Maryland. Description This contract is for the continuation of a Clinical Research Products Management Center (CRPMC) that provides investigational study product management expertise and pharmaceutical services that adhere to current Good Manufacturing Practice (cGMP), the International Conference on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use (ICH)/Good Clinical Practice (GCP), the Food and Drug Administration (FDA), Code of Federal Regulations (CFR), and all applicable regulations in support of NIAID supported clinical trials networks and programs. This contract is for the management and operation of the CRPMC to support NIAID sponsored clinical research trials, with a core focus of HIV/AIDS and its co-morbidities. The Contractor shall provide cGMP-compliant facilities for the receipt, storage, handling, shipping, and disposition of study products. All functions must be conducted in accordance with all federal, local and other applicable regulations governing study product including but not limited to, the CFR, ICH GCP, cGMP, Good Distribution Practices (GDP), Good Documentation Practices and all applicable regulation or guidance. Anticipated Period of Performance It is anticipated that a cost reimbursement, term/level of effort (LOE) type contact will be awarded as a result of this solicitation. The period of performance will be for one year (Base Period) plus six (6) one-year Options to extend the term of the contract that may be exercised by the Government unilaterally, for a total possible period of performance of seven (7)</p>

---------	---------------	--------------	----------------	---------------	----------------

years, beginning approximately March 16, 2027. The requirement will be the delivery of 27 full time equivalents (FTEs) per year for the base period (Year 1) and 27 FTEs per year for Options 1-6 (Years 2-7), including consultant and subcontractor effort for years 1 through 7. In addition to the services outlined above to be provided in the base requirement, options for additional services under the contract may be exercised at the discretion of the Government as follows: Options 7 through 34: Increased level of effort to accommodate significant increases in work in the amount of 2 FTEs per option that may be exercised up to four times per year in years 1 through 7. Options 35 through 48: Increased level of effort to accommodate significant increases in work in the amount of .5 FTE per option that may be exercised up to two times per year in years 1 through 7. Should the Government elect to exercise these options, the Contractor shall provide resources as stated above. Any responsible offeror may submit a proposal which will be considered by the Agency. This RFP will be available electronically on/about March 27, 2026, and may be accessed through SAM.gov. This notice does not commit the Government to award a contract. No collect calls will be accepted. No facsimile transmissions will be accepted. For this solicitation, the NIAID requires proposals to be submitted online via the NIAID electronic Contract Proposal Submission (eCPS) website. Submission of proposals by facsimile or e-mail is not acceptable. For directions on using eCPS, go to the website <https://ecps.nih.gov> and then click on "How to Submit."

 Deadline Dates (ALL) | 22-Jun-2026

Synopsis | The National Institute of Allergy and Infectious Diseases (NIAID), National Institutes of Health (NIH), of the Department of Health and Human Services (DHHS) supports research related to the basic understanding of microbiology and immunology leading to the development of vaccines, therapeutics, and medical diagnostics for the prevention, treatment, and diagnosis of infectious and immune-mediated diseases. As part of this mission, NIAID requires continued operation of the NIH Tetramer Core Facility (TCF). The TCF is a centralized resource producing and distributing custom MHC multimer reagents for the biomedical research community. These reagents enable the sensitive and specific detection of antigen-specific T cells across a range of diseases, including autoimmunity, cancer, and infectious diseases. MHC multimers are powerful tools for the rapid, highly sensitive quantitation of antigen-specific T cells from blood or tissue samples. Traditional reagents are comprised of four

---------	---------------	--------------	----------------	---------------	----------------

identical biotinylated MHC molecules, each loaded with an antigen-specific peptide/ligand, tetramerized using a streptavidin-linked fluorophore (i.e., tetramers). Current production methods may also generate higher-order multimers, either as a byproduct of the multimerization process or through approaches specifically designed to produce MHC multimers with higher valency. The TCF is an essential resource for the biomedical research community, enabling precise characterization of antigen-specific T cell populations. It plays a key role in research aligned with DHHS priorities, including the study and treatment of chronic and complex diseases, such as food allergies, autoimmune diseases, cancer, narcolepsy, organ transplantation, and Alzheimer's Disease. These efforts are central to advancing DHHS' mission to enhance health outcomes, improve quality of life, and reduce the burden of disease through scientific innovation. The NIH Tetramer Core Facility contract was initially awarded in 1999. The current contract is held by Emory University (Atlanta, GA) under contract number 75N93020D00005. Purpose and Objectives The NIH Tetramer Core Facility Contractor is responsible for the synthesis and distribution of soluble MHC-peptide tetramer and related reagents to the broader scientific community. Such reagents include, but are not limited to: mouse, non-human primate, human, and other mammalian MHC class I monomers and tetramers; custom and premade mouse, non-human primate, human, and other mammalian class II tetramers; non-classical MHC TL, Qa-1, and mammalian CD1 monomers and tetramers; CD1d and other MHC ligands; and fluorophores for tetramer detection. Project requirements The major functions to be carried out by the Contractor are: A. Provide a tetramer production facility B. Provide a distribution, tracking, and reporting system of reagents produced C. Design a NIH Tetramer Core Facility website and provide related maintenance D. Provide Tetramer Core Facility program management It is estimated that 9 Full-time Equivalents (FTEs) are required to conduct these functions. While the NIH Tetramer Core Facility is responsible for providing ligands for all premade reagents, the client is responsible for supplying ligands for custom MHC Class I and II monomer and tetramer production. Anticipated Period of Performance: The Government anticipates awarding one (1) cost-reimbursement, term (Level of Effort) type contract to fulfill the technical requirements. The period of performance will be for one (1) year Base Period plus six (6) one-year options (terms that may be exercised by the Government unilaterally) beginning on or about March 21, 2027. The level of effort required for this effort is estimated to be nine (9) Full-Time Equivalents (FTEs) per year for the Base Period and nine (9) FTEs for each option period (Options 1-6). Options 1 through 6 to Extend the Term of the Contract: The Government may exercise options to extend the period of the contract beyond the base period (Year 1), annually, for a total contract period of up to 7 years. The scope and types of activities as outlined for Year 1 of the contract would be continued for each succeeding annual contract period up to 7 total years. Any responsible offeror may submit a proposal which will be considered by the Agency. This RFP will be available electronically on/about April 15, 2026, and may be accessed through SAM.gov. This notice does not commit the Government to award a contract. No collect calls will be accepted. No facsimile transmissions will be accepted. For this solicitation, the NIAID requires proposals to be submitted online via the NIAID electronic Contract Proposal Submission (eCPS) website. Submission of proposals by facsimile or e-mail is not acceptable. For directions on using eCPS, go to the website <https://ecps.nih.gov> and then click on "How to Submit."

Synopsis | The purpose of this notice of funding opportunity (NOFO) is to encourage community-engaged research that broadens the conceptualization of qualities of the environment that can support language development in children and that focuses on the development of novel measures of children’s language development. The overall goal is to build the number of strengths-focused, culturally and linguistically responsive, and generalizable tools to further our understanding of children’s language development and/or impairment, and predictors thereof. This Notice of Funding Opportunity (NOFO) requires a Plan for Enhancing Diverse Perspectives (PEDP).

 Deadline Dates (ALL) | 10-Jun-2026

Synopsis | This solicitation is issued by the National Institutes of Health, Office of the Director, Office of Acquisitions and Logistics Management, on behalf of the National Institute on Alcohol Abuse and Alcoholism (NIAAA). This acquisition is a re-competition for a follow-on contract for Clinical Research Organization (CRO) clinical trial coordination and support services to support all aspects of multiple, multi-center, pharmacotherapy clinical trials for the treatment of Alcohol Use Disorder (AUD). This acquisition represents is a follow-on requirement to indefinite delivery/indefinite quantity contract 75N94019D00001, awarded to Fast-Track Drugs & Biologics, LLC with a Task Order ordering period of February 1, 2019 through January 31, 2026. An indefinite delivery/indefinite quantity (IDIQ) contract with an ordering period of seven years (commencing 11/15/2026) for the issuance of project-specific task orders is anticipated to continue the CRO R&D clinical study coordination and support services currently provided under contract 75N94019D00001 for the NIAAA Medications Development Clinical Trials Network.

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
---------	---------------	--------------	----------------	---------------	----------------

Individual task orders for assigned clinical trials will be issued as needs arise on a cost plus fixed fee basis. The CRO contractor shall support development, coordination and operation of each task order-assigned clinical trial including but not limited to clinical trial coordination support, clinical site oversight and management support, preparation of study documents, electronic data capture of clinical data from all participating clinical sites, Good Clinical Practice (GCP) monitoring services, acquisition and facilitation of study medication and packaging, shipping and coordination of study medication, logistical and meeting services, regulatory support and services, statistical and data analysis, and final clinical study report preparation and submission and manuscript preparation. The clinical research sites for each assigned task order/clinical study will be established under separate NIAAA contracts. It is anticipated that four to six CRO Clinical Study Support task orders will be issued via individual task orders during the seven-year ordering period of the indefinite delivery/indefinite quantity (IDIQ) contract. It is anticipated that the Base Indefinite Delivery/Indefinite Quantity contract and the Core and Study Development Support task order will be awarded on or around November 15, 2026. This acquisition will be competed as a 100% Set-Aside for Small Business concerns whereby only Small Business concerns will be eligible for award (size standard for associated NAICS 541715, Research and Development in the Physical, Engineering, and Life Sciences [except Nanotechnology and Biotechnology] is 1,000 employees). A small business concern, as defined by FAR 19.001, means any business entity organized for profit (even if its ownership is in the hands of a nonprofit entity) with a place of business located in the United States or its outlying areas and that makes a significant contribution to the U.S. economy through payment of taxes and/or use of American products, material and/or labor, etc. "Concern" includes but is not limited to an individual, partnership, corporation, joint venture, association, or cooperative. For more information, see 13 CFR 121.105. Additionally, for acquisitions conducted under a 100% Small Business Set-Aside, per FAR 19.505(b)(1)(i), Limitations on Subcontracting, the concern [small business prime contractor] will not pay more than 50 percent of the amount paid by the Government for contract performance to subcontractors that are not similarly situated entities [e.g. also small businesses concerns]. Any work that a similarly situated entity further subcontracts will count towards the concern's 50 percent subcontract amount that cannot be exceeded. THE SOLICITATION WILL BE AVAILABLE ELECTRONICALLY ONLY. OFFERORS ARE RESPONSIBLE FOR ROUTINELY CHECKING THE SAM.GOV CONTRACT OPPORTUNITIES WEBSITE FOR ANY POSSIBLE SOLICITATION AMENDMENTS THAT MAY BE ISSUED AFTER RELEASE OF THE PENDING SOLICITATION. Any responsible small business concern may submit a proposal, which shall be considered by the agency. This notice does not commit the Government to award a contract. No collect calls will be accepted. Proposals must be submitted via the NIH electronic Contract Proposal Submission (eCPS) website at <https://ecps.nih.gov>. Submission of proposals by facsimile or e-mail is not acceptable. For directions on using eCPS, go to the website (<https://ecps.nih.gov>) and then click on How to Submit. See ATTACHMENT 1 of the RFP for full details. In addition to the ATTACHMENTS provided with this posting, see Section J of the Request for Proposals document for links to other applicable attachments.

Studies appropriate for this NOFO are those testing a drug, biologic, device, or procedure to improve dental, oral, or craniofacial diseases or conditions, including trials for any phase of testing for a Food and Drug Administration (FDA)-regulated product. Awards made under this NOFO will initially support a one-year milestone-driven planning phase (UG3), with possible transition to a clinical trial implementation phase (UH3) of up to five years. Progression to the UH3 phase is based on an administrative review and is dependent on success in meeting UG3 milestones, NIDCR program priorities, and availability of funds. The UG3/UH3 application must be submitted as a single application with the final design of the UH3 clinical trial including detail about the study population, intervention(s), and outcome(s) described in the application, following the instructions described in this NOFO. The UG3 planning phase permits both scientific and operational planning activities, though the planning phase cannot be used to test for intervention safety or efficacy or assess the study's primary outcome. The UH3 phase of the award will support the conduct of one investigator-initiated clinical trial. Applications designed to test behavior change interventions or those used as tools to understand mechanisms of behavior change will not be supported by this NOFO.</p>

A broad range of intervention research projects that meet the NIH Definition of a Clinical Trial are appropriate for this opportunity. Awards made under this NOFO will initially support a milestone-driven planning phase (UG3) for 1 year, with possible transition to a clinical trial implementation phase (UH3) of up to five years. The UG3/UH3 application must be submitted as a single application. Applications that employ traditional methods as well as novel/advanced features (e.g., mobile health, artificial intelligence, telehealth, responsive health system records, multiple assignment randomized trial designs (SMART) or sequential randomization designs), etc., are encouraged. This NOFO will not support the testing of drugs, devices, or biologics regulated by the FDA; the corresponding NOFO for clinical trials in these areas is PAR-25-057.</p>

	<p>Program URL <a href="#">Link to program URL</a></p> <p>Deadline Dates (ALL) 07-May-2026 , 16-Jun-2026 , 07-Sep-2026 , 16-Oct-2026 , 07-Jan-2027 , 16-Feb-2027 , 07-May-2027 , 16-Jun-2027 , 07-Sep-2027 , 16-Oct-2027 , 07-Jan-2028</p> <p>Synopsis The National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK) announces a program that provides NIDDK-supported K01, K08, K23, and K25 recipients the opportunity to apply for Small Grant (R03) support during the latter years of the award period of their K award. Through the use of this mechanism, the NIDDK is seeking to enhance the capability of its K01, K08, K23, and K25 award recipients to conduct research as they complete their transition to fully independent investigator status. The R03 grant mechanism supports different types of projects, including pilot and feasibility studies; secondary analysis of existing data; small, self-contained research projects; development of research methodology; and development of new research technology. The R03 is, therefore, intended to support research projects that can be carried out in a short period of time with limited resources and that may provide preliminary data to support a subsequent R01, or equivalent, application. This Notice of Funding Opportunity (NOFO) requires a Plan for Enhancing Diverse Perspectives (PEDP).</p>				
125765	<a href="#">Academic Research Enhancement Award for Undergraduate-Focused Institutions (R15 Clinical Trial Not Allowed)</a>	National Institute of General Medical Sciences/NIH/DHHS	PAR-25-134	07-May-2026	375,000 USD

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
	<p>Deadline Dates (ALL) 07-May-2026 , 05-Jun-2026 , 07-Sep-2026 , 05-Oct-2026 , 07-Jan-2027 , 05-Feb-2027 , 07-May-2027 , 05-Jun-2027 , 07-Sep-2027 , 05-Oct-2027 , 07-Jan-2028</p> <p>Synopsis This Funding Opportunity Announcement (FOA) supports projects relevant to the NIGMS mission or those of other NIH institutes or Centers (ICs) participating in the FOA that focus solely on the development of technologies with the potential to enable acquisition of biomedical knowledge. Projects should be justified in terms of technical innovation and utility of such technical innovation for impacting future biomedical research. Outcomes or products of the proposed project should significantly advance the current state of the art and be sufficiently characterized for application in addressing a broad range of biomedical research questions. These outcomes may include, but are not limited to: laboratory instruments and other devices, algorithms and software, chemical reagents and processes, biological molecules or systems that have been modified by human intervention to become research tools. The goal of this FOA is to support the development of technologies with demonstrated proof-of-concept that have remaining significant technical challenges to full implementation and broad utility. As such, applications should not propose to test specific biological questions. Applications proposing to test specific biological questions are not responsive to this FOA and will be administratively withdrawn without review. Applications with a focus on optimization, hardening, or obvious extrapolations of established technology will be a lower priority for funding.</p>

become research tools. This NOFO does not support technology development that is narrowly focused on addressing specific biological questions or that re-purposes existing technologies for new uses. Rather, applications should propose development of new tools that can potentially benefit a broad spectrum of biomedical research. Moreover, feasibility of the proposed technology must not have already been established in the literature or with preliminary data. Applications that are focused on technology development to address specific biological questions and/or include unpublished or published data that provide proof of concept are not responsive to this NOFO and will be administratively withdrawn without review.

Deadline Dates (ALL)	07-May-2026 , 15-Jun-2026 , 07-Sep-2026 , 14-Oct-2026 , 07-Jan-2027 , 11-Feb-2027 , 07-May-2027 , 11-Jun-2027 , 07-Sep-2027 , 08-Oct-2027 , 07-Jan-2028
Synopsis	<p>The purpose of the Advancing Research Careers (ARC) program is to support cohorts of promising, late-stage graduate students from diverse backgrounds pursuing research training in NIH mission areas. The program has two components: an individual predoctoral-to-postdoctoral transition award (F99/K00) and a research education cooperative agreement (UE5) awarded to organizations to provide F99/K00 fellows with additional mentoring, networking and professional development activities to support their transition to and success in mentored postdoctoral research positions. The ARC program supports NIH's efforts to develop a biomedical research workforce that will benefit from the full range of perspectives, experiences and backgrounds needed to advance discovery. The ARC Predoctoral to Postdoctoral Transition Award to Promote Diversity (F99/K00) is a two-phase award that will provide support for promising late-stage graduate students from diverse backgrounds pursuing research related to the mission areas of participating NIH Institutes, Centers and Offices (ICOs), to complete their doctoral research training (F99 phase) and transition into and succeed in postdoctoral biomedical research and career development opportunities (K00 phase). The program also is designed to support predoctoral researchers who have, appropriate to their career stage, demonstrated contributions and propose meaningful plans to promote broad participation in the biomedical research workforce. It is anticipated that completion of this phased award program will position ARC scholars to advance in impactful careers in the biomedical research workforce that typically require postdoctoral training (for example,</p>

The BRAIN Initiative BBQS funding opportunities broadly support 1) development of tools for simultaneous, multimodal measurement of behavior within complex, dynamic physical and/or social environments and synchronize these data with simultaneously-recorded neural activity and 2) development of novel conceptual and computational models that capture dynamic behavior-environment relationships across multiple timescales and that can integrate correlated neural activity into the model. More information about the BRAIN Initiative including existing Notices of Funding Opportunities for the BBQS program can be found here. This NOFO focuses exclusively on the development of novel sensor technology and bioelectronic devices related to the BBQS program and follows a recent workshop BBQS Workshop May 2023. This NOFO will foster close interaction between engineers and behavioral scientists in a Research Consortium. Sensor developers in the Consortium will promote rigorous technology design, fabrication, testing, validation, and dissemination of information regarding sensors and bioelectronics toward improving our understanding of human and organismal behavior. This Notice of Funding Opportunity (NOFO) requires a Plan for Enhancing Diverse Perspectives (PEDP).</p>

recipients will be expected to partner with device manufacturers, the researcher community, and other interested parties such as ethics experts if the effort is going to be successful. It is expected that the recipient will create standards for personal tracking device data that serve the same purpose as the Digital Imaging and Communications in Medicine (DICOM) or Neuroimaging Informatics Technology Initiative (NIFTI) formats and standards do for medical image files. Those medical image file standards have allowed secondary data analysis and have resulted in many software packages and workflows for secondary data analysis.

**Synopsis** This Notice of Funding Opportunity (NOFO) from the NIH Brain Research through Advancing Innovative Neurotechnologies (BRAIN) Initiative is intended to support dissemination facilities for scaled-up production and distribution of a specific set of brain cell type-specific access reagents to study circuit function. Production and Distribution Facilities will be supported to disseminate hundreds of reagents specifically from Reagent Resource for Design and Development projects developed under RFA-MH-25-100. This NOFO will support facilities to interface with these specific reagent development projects, scale up reagent production, disseminate reagents broadly, and coordinate reagent data distribution. The types of reagents to be produced and distributed could include but are not limited to viral vectors, nucleic acid constructs, and nanoparticles designed for selective access to hundreds of brain cell types. Such reagents will enable neuroscientists to probe circuit function with high precision in experimental animals and ex vivo human tissue and cells. Facilities are needed to contribute to the production and distribution of reagents broadly to neuroscience researchers. This NOFO is part of the BRAIN Initiative Armamentarium project, whose overall goal is to generate tools to specifically access, manipulate, and monitor brain cell types across multiple vertebrate species. This NOFO will foster close interaction between technologists, disseminators, and neurobiologists in a research consortium including investigators funded by other Armamentarium NOFOs. This NOFO requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation. Applications that fail to include a PEDP will be considered incomplete and will be withdrawn.

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
	<p>Deadline Dates (ALL) 16-May-2026 [Optional][LOI/Pre-App], 15-Jun-2026 , 15-Sep-2026 [Optional][LOI/Pre-App], 15-Oct-2026 , 18-Jan-2027 [Optional][LOI/Pre-App], 17-Feb-2027 , 16-May-2027 [Optional][LOI/Pre-App], 15-Jun-2027 , 15-Sep-2027 [Optional][LOI/Pre-App], 15-Oct-2027</p> <p>Synopsis NIMH solicits clinical trial applications through a series of notice of funding opportunities (NOFOs) that cover the intervention development pipeline, from first-in-human, early testing of new interventions, confirmatory efficacy trials, through to effectiveness trials The purpose of this NOFO is to encourage pilot research developing and testing innovative psychosocial intervention approaches in which the target and/or intervention strategy is novel. Consistent with NIMH’s experimental therapeutics approach, this NOFO is intended to speed the translation of emergent research on mechanisms and processes underlying mental disorders into promising novel psychosocial preventative or therapeutic interventions. Targets may include, but are not limited to, potentially modifiable behavioral, cognitive, affective, and/or interpersonal factors or processes, neural circuits or neural activity subserving specific behaviors or cognitive processes, and/or other neurobiological mechanisms. Novel psychosocial interventions may be standalone interventions or novel augmentations to efficacious interventions for which there is an empirical rationale by which the augmentation (and corresponding target) is expected to substantially enhance outcomes. Support will be provided for up to two years (R61 phase) for preliminary milestone-driven testing of a novel intervention's impact on a target process or mechanism associated with mental disorder risk, causation, or maintenance (target engagement). Up to 3 years of additional support (R33 phase) will be provided for studies with findings that meet the "go/no-go" milestones embedded in the R61 phase. The R33 phase is intended to support the replication of target engagement and to test whether engaging the intervention target/mechanism mediates changes in clinical outcomes. Ultimately, trials must be designed so that results, whether positive or negative, will provide information of high scientific utility and will support "go/no-go" decisions about further development and/or testing of the intervention. Applicants pursuing other stages of the clinical trial pipeline should consider one of the companion NOFOs listed above.</p>

Synopsis	The purpose of this notice of funding opportunity (NOFO) is to accelerate innovative drug and device therapies translation from discovery to early human studies. Studies appropriate for this NOFO will develop pharmacologic and neuromodulatory tools for basic and clinical research on mental health disorders; develop and validate tools (pharmacologic or neurostimulation) in support of experimental therapeutic studies of innovative candidates for mental disorders; and support

early-stage human studies to rapidly assess the safety, tolerability, and pharmacodynamics of promising drug candidates/devices and new indications for novel Investigational New Drug (IND)-ready agents or Investigational Device Exemption (IDE)-ready devices for the treatment of mental disorders. This NOFO encourages applications to advance the discovery, preclinical development, and proof of concept (PoC) testing of new, rationally based candidate agents and neurostimulation approaches to treat mental disorders, and to develop novel ligands and circuit-engagement devices as tools to further characterize existing or to validate new drug/device targets. Partnerships between academia and industry are strongly encouraged. This NOFO will also support applications proposing preclinical discovery of biotechnology products and biologics with potential as candidate therapeutics including, but not limited to, large biologic macromolecules, (e.g., proteins, antibodies, and peptides), gene-based therapies (i.e., oligonucleotide- and viral vector-based), cell therapies, and novel emerging therapies (e.g., microbial and microbiome therapies). This NOFO supports a discrete, specified, circumscribed project to be performed by the named investigator(s) in an area representing his or her specific interest and competencies. Projects seeking support for a research program of multiple projects directed toward a specific major objective, basic theme, or program goal, requiring a broadly based, multidisciplinary, and often long-term approach should consider the companion NOFO PAR-25-353.

	Synopsis	NIMH seeks applications for innovative research projects to test strategies to increase the reach, efficiency, effectiveness, and quality of digital mental health interventions which may impact mental health outcomes, including suicide behaviors and serious mental illness. This Funding Opportunity Announcement (FOA) is intended to support the development of digital health test beds that leverage well-established digital mental health platforms and infrastructure to rapidly refine and optimize existing evidence-based digital health interventions and to conduct clinical research testing digital mental health interventions that are statistically powered to provide a definitive answer regarding the intervention's effectiveness particularly in populations who experience health disparities and vulnerable populations.

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
	<p>Program URL <a href="#">Link to program URL</a></p> <p>Deadline Dates (ALL) 06-May-2026 [Optional][LOI/Pre-App], 05-Jun-2026 , 05-Sep-2026 [Optional][LOI/Pre-App], 05-Oct-2026 , 06-Jan-2027 [Optional][LOI/Pre-App], 05-Feb-2027 , 06-May-2027 [Optional][LOI/Pre-App], 05-Jun-2027 , 05-Sep-2027 [Optional][LOI/Pre-App], 05-Oct-2027</p> <p>Synopsis NIMH seeks applications for pilot projects to evaluate the preliminary effectiveness of therapeutic and service delivery interventions for the post-acute management of mental health conditions that are matched to the stage of illness in terms of both their focus (e.g., consolidating and maintaining gains from initial treatment, managing residual symptoms/impairment, preventing relapse, promoting adherence and appropriate service use) and intensity/burden. In this pilot phase of effectiveness research, the trial should be designed to evaluate the feasibility, tolerability, acceptability, safety, and potential effectiveness of the approach; to address whether the intervention engages the target(s)/mechanisms(s) presumed to underlie the intervention effects; and to obtain preliminary data needed as a pre-requisite to a larger-scale effectiveness trial (e.g., comparative effectiveness study, practical trial) designed to definitely test the effectiveness of interventions to improve post-acute outcomes. This notice of funding opportunity (NOFO) supports pilot research to evaluate the feasibility, tolerability, acceptability, safety, and preliminary indications of effectiveness of post-acute phase intervention approaches, to generate the preliminary data needed as a prerequisite to well powered effectiveness trials, and to inform the design of definitive effectiveness trials. Support for fully-powered, definitive effectiveness studies focused on post-acute phase interventions is provided via the R01 NOFO,PAR-25-207.</p>

for the post-acute management of mental health conditions affecting youth, adults, and older adults. This notice of funding opportunity (NOFO) encourages clinical trials to establish the effectiveness and test hypotheses regarding mechanisms of action, mediators, and predictors and moderators of post-acute phase therapeutic and services interventions that are matched to the stage of illness in terms of both their focus (e.g., consolidating and maintaining gains from initial treatment, managing residual symptoms/impairment, preventing relapse, promoting adherence and appropriate service use) and intensity/burden for promoting optimal longer-term outcomes. This NOFO is intended to support trials that are statistically powered to provide a definitive answer regarding the effectiveness of the post-acute phase intervention. Support for pilot effectiveness trials designed to evaluate the initial feasibility, tolerability, acceptability, safety and preliminary indications of post-acute phase intervention approaches is provided via the R01 NOFO, PAR-25-206 .

Synopsis The purpose of this notice of funding opportunity (NOFO) is to encourage innovative research that will inform and support the delivery of high-quality, continuously improving mental health services to benefit the greatest number of individuals with, or at risk for developing, a mental illness. This announcement invites applications for non-clinical trial R01-level projects that address NIMH strategic priorities that strengthen the public health impact of NIMH-supported research as described in Goal 4 of the NIMH Strategic Plan. This NOFO solicits research projects including, but not limited to the following: (a) research identifying mutable factors that impact access, continuity, utilization, quality, value, and outcomes, including disparities in outcomes, or scalability of mental health services, which may serve as targets in future service delivery intervention development, (b) research that develops and tests new research tools, technologies, measures, or methods and statistical approaches to study these issues, and/or (c) research that integrates and analyzes large data sets to understand factors affecting mental health services outcomes using advanced computational and predictive analytic approaches. Wherever possible, projects should leverage existing infrastructure and partnerships to accomplish these goals.

 Deadline Dates (ALL) | 05-Jun-2026

Synopsis | This Notice of Funding Opportunity (NOFO) encourages research on the biology of high-confidence risk factors associated with complex brain disorders, with a focus on the intracellular, transcellular, and circuit substrates of neural function. For the purposes of this NOFO, the term “complex” can refer to a multifactorial contribution to risk (e.g., polygenic and/or environmental) and/or highly distributed functional features of the brain disorder. Studies may be either hypothesis-generating (unbiased discovery) or hypothesis-testing in design and may utilize in vivo, in situ or in vitro experimental paradigms, e.g., model organisms or human cell-based assays. While behavioral paradigms and outcome measures can be incorporated into the research design to facilitate the characterization of intracellular, transcellular, and circuit mechanisms, these are neither required nor expected. Studies should not attempt to “model” disorders but instead should aim to elucidate the neurobiological impact of individual or combined risk factor(s), such as the affected molecular and cellular components and their relationships within defined biological process(es). This can include the fundamental biology of these factors, components, and processes. The resulting paradigms, component pathways, and biological processes should be disseminated with sufficient detail to enrich common and/or federated data resources (e.g., those contributing to the Gene Ontology, Synaptic Gene Ontology, FAIR Data Informatics) in order to bridge the gap between disease risk factors, biological mechanism and therapeutic target identification. The present NOFO (R01 activity code) can be used for applications to further develop lines of inquiry where feasibility or proof-of-concept has been established. Applicants proposing exploratory research at the early and conceptual stages of project development should apply to the companion R21 NOFO PAR-25-037.

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
	<p>Sponsor Website</p> <p>Program URL <a href="#">Link to program URL</a></p> <p>Deadline Dates (ALL) 05-Jun-2026 , 05-Oct-2026 , 05-Feb-2027 , 05-Jun-2027 , 05-Oct-2027</p> <p>Synopsis                      The purpose of this funding opportunity announcement (FOA) is to encourage applications seeking to develop the next generation of brain stimulation devices for treating mental health disorders. Applications are encouraged that will either 1) develop novel brain stimulation devices or 2) significantly enhance, by means of hardware/software improvements, the effectiveness of brain stimulation devices that are currently U.S. Food and Drug Administration (FDA)-approved or cleared. Novel devices should move beyond existing electrical/magnetic stimulation and develop new stimulation techniques capable of increased spatiotemporal precision as well as multi-focal, closed-loop approaches. Applications seeking to develop new capabilities should focus on significant enhancement of the spatial resolution, depth of delivery, and/or precision of the device. Incremental changes to existing devices (e.g., software updates) are not within the scope of this announcement. Applications should be submitted by multi-disciplinary teams with diverse expertise including systems neuroscience, engineering, clinical, and regulatory affairs. Applications submitting in response to this FOA should promote the development or significant enhancement of novel tools (hardware/software) for brain stimulation in humans. Although the application should focus on the engineering development and bench top testing of the tool, animal and limited human testing necessary to demonstrate initial proof of concept is allowable. Applications to this FOA are not expected to be hypothesis-driven, but should propose design-directed, developmental, or discovery-driven technology research using integrative approaches.</p>				
128912	<a href="#">Mood and Psychosis Symptoms During the Menopause Transition (R01 Clinical Trial Optional)</a>	National Institute of Mental Health/NIH/DHHS	PAR-25-281	05-Jun-2026	Not Specified

					for future mental health interventions or prevention efforts This NOFO uses the R01 grant mechanism, while the companion NOFO PAR-25-282 uses the R21 mechanism. Investigators proposing high risk/high reward projects, projects that lack preliminary data, or studies that utilize existing data may wish to apply using the R21 mechanism, while applicants with preliminary data who seek longer-term funding may wish to apply using the R01 mechanism.
128915	<a href="#">Utilizing Invasive Recording and Stimulating Opportunities in Humans to Advance Neural Circuitry Understanding of Mental Health Disorders (R01 Clinical Trial Optional)</a>	National Institute of Mental Health/NIH/DHHS	PAR-25-290	06-May-2026 [Optional][LOI/Pre-App]	Not Specified
	<p>Contact Name   Jessica Tilghman, Ph.D.</p> <p>Contact Telephone   301-827-0439</p> <p>Contact Email   <a href="mailto:jessica.tilghman@nih.gov">jessica.tilghman@nih.gov</a></p> <p>Sponsor Website  </p> <p>Program URL   <a href="#">Link to program URL</a></p> <p>Deadline Dates (ALL)   06-May-2026 [Optional][LOI/Pre-App], 05-Jun-2026 , 05-Sep-2026 [Optional][LOI/Pre-App], 05-Oct-2026 , 06-Jan-2027 [Optional][LOI/Pre-App], 05-Feb-2027 , 06-May-2027 [Optional][LOI/Pre-App], 05-Jun-2027 , 05-Sep-2027 [Optional][LOI/Pre-App], 05-Oct-2027</p> <p>Synopsis   The purpose of this Funding Opportunity Announcement (FOA) is to encourage applications to pursue invasive neural recording studies focused on mental health-relevant questions. Invasive neural recordings provide an unparalleled window into the human brain to explore the neural circuitry and neural dynamics underlying complex moods, emotions, cognitive functions, and behaviors with high spatial and temporal resolution. Additionally, the ability to stimulate, via the same electrodes, allows for direct causal tests by modulating network dynamics. This FOA aims to target a gap in the scientific knowledge of neural circuit function related to mental health disorders. Researchers should target specific questions suited to invasive recording modalities that have high translational potential. Development of new therapies is outside the scope of this FOA, though development of novel tools/methods to enable relevant mental health studies is encouraged. This NOFO uses the R01 grant mechanism, encouraging longer-term projects, whereas its companion R21 NOFO, PAR-25-291, seeks grant applications encouraging shorter, higher-risk studies with little (or no) preliminary data.</p>

Synopsis  
 The purpose of this Funding Opportunity Announcement (FOA) is to encourage applications that will advance mechanistic and translational research on the onset and worsening of mood and psychotic disorders during the menopausal transition (or perimenopause). In particular, NIMH seeks research that will advance understanding of the underlying neurobiological and behavioral mechanisms of mood disruption and psychosis during the menopausal transition and that will identify novel targets for future mental health interventions or prevention efforts. This NOFO uses the R21 mechanism, while the companion NOFO PAR-25-281 uses the R01 grant mechanism. Investigators proposing high risk/high reward projects, projects that lack preliminary data, or studies that utilize existing data may wish to apply using the R21 mechanism, while applicants with preliminary data who seek longer-term funding may wish to apply using the R01 mechanism.

Synopsis

The purpose of this notice of funding opportunity (NOFO) is to encourage applications to pursue invasive neural recording studies focused on mental health-relevant questions. Invasive neural recordings provide an unparalleled window into the human brain to explore the neural circuitry and neural dynamics underlying complex moods, emotions, cognitive functions, and behaviors with high spatial and temporal resolution. Additionally, the ability to stimulate, via the same electrodes, allows for direct causal tests by modulating network dynamics. This NOFO aims to target a gap in the scientific knowledge of neural circuit function related to mental health disorders. Researchers should target specific questions suited to invasive recording modalities that have high translational potential. Intervention-development clinical trials of therapeutic devices are outside the scope of this NOFO, though development of novel tools/methods to enable relevant mental health studies is encouraged. This NOFO uses the R21 grant mechanism, encouraging shorter, higher-risk applications, whereas its companion funding opportunity, PAR-25-290, seeks R01 grant applications.

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
---------	---------------	--------------	----------------	---------------	----------------

Deadline Dates (ALL) | 16-May-2026 [Optional][LOI/Pre-App], 15-Jun-2026 , 15-Sep-2026 [Optional][LOI/Pre-App], 15-Oct-2026 , 18-Jan-2027 [Optional][LOI/Pre-App], 17-Feb-2027 , 16-May-2027 [Optional][LOI/Pre-App], 15-Jun-2027 , 15-Sep-2027 [Optional][LOI/Pre-App], 15-Oct-2027

Synopsis | NIMH solicits clinical trial applications through a series of notice of funding opportunities (NOFOs) that cover the intervention development pipeline, from first-in-human, early testing of new interventions, confirmatory efficacy trials, through to effectiveness trials. The purpose of this NOFO is to support the early stage testing of pharmacologic interventions with novel mechanisms of action or neuromodulatory device-based interventions for the treatment of symptoms or domains of altered functions in individuals with mental illness (e.g., schizophrenia, depression, autism, obsessive compulsive disorder, anxiety, bipolar disorder). Early intervention studies are also encouraged where symptoms of a disorder have been identified in subjects (a prodromal phase) prior to full diagnostic criteria being met. Ultimately, this NOFO is intended to support evaluation of pharmacologic or neuromodulatory device-based interventions using a protocol design where the presumed mechanism of action of the intervention is adequately tested, to provide meaningful information where target modulation yields a well-controlled, dose-dependent neurophysiological/clinical/behavioral effect. Pediatric, adult, and geriatric-focused interventions are appropriate for this NOFO. The R61/R33 NOFOs are intended to support biphasic high-risk applications. Support for a single phased award that does not need the developmental (R61) phase is available in the companion R33, PAR-25-183. Applicants pursuing other stages of the clinical trial pipeline should consider one of the companion NOFOs listed above.

interventions, confirmatory efficacy trials, through to effectiveness trials. This NOFO complements NIMH’s suite of clinical trial funding opportunities by supporting milestone-driven feasibility and infrastructure development (R61) research followed by well-powered clinical trials (R33) to test the effectiveness of system interventions or strategies that improve the organization, delivery, coordination, and outcomes of mental health care for priority populations. System interventions - which may span, for example, structural, policy, and organizational domains - attend to issues about the access, equity, engagement/utilization, value (cost/financing), management, or quality and safety of mental health services, with the goal of improved care processes and clinical, functional, or population level outcomes. Accordingly, the focus of system interventions may include multiple factors/levels related to care delivered within or across a variety of care settings, such as health systems and organizations, mental health and community clinics, schools, and social welfare or justice systems. Projects may test the impact of policies and practices, interventions to facilitate care transitions and continuity across settings, and interventions to improve linkages/coordination across systems. Researchers will have up to two years in the R61 phase to demonstrate feasibility and adequate infrastructure to justify conducting the main trial (R33). Applicants pursuing other stages of intervention development and testing should refer to companion NOFOs listed at Support for Clinical Trials at NIMH.

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
---------	---------------	--------------	----------------	---------------	----------------

cover the intervention development pipeline, from first-in-human, early testing of new interventions, confirmatory efficacy trials, through to effectiveness trials. The purpose of this NOFO is to encourage cooperative agreement applications to support early stage clinical trials of novel mechanism of action investigational drugs or novel neuromodulatory devices for the treatment of psychiatric disorders in areas of unmet medical need. The NOFO will support milestone-driven early stage trials, including First-in-human (FIH), Phase Ib, Phase II/PoC and early feasibility studies (EFS), in pediatric and adult populations. These studies are designed to objectively and dose dependently assess target engagement in the central nervous system (CNS), along with safety and tolerability. Phase II/PoC studies additionally must evaluate the drug's/device's impact on clinically relevant physiological systems (functional measures) and clinical indicators of effect. The overall objective of this NOFO is to facilitate rapid collection of data to "de-risk" novel mechanism of action investigational drugs, novel drugs for use in pediatric populations with psychiatric disorders, and devices or combination treatments in order to attract private or other public funding (when appropriate) for further clinical development as Food and Drug Administration (FDA)-approved treatments. A key aspect of this NOFO is the formation of collaborative partnerships between the biomedical researchers and biotechnology or industry researchers to facilitate psychiatric drug or device development. This NOFO is designed for applicants seeking funding for cooperative agreements supporting early stage clinical trials as outlined above. Applicants pursuing other stages of the clinical trial pipeline or funding for clinical research not involving cooperative agreements should consider one of the companion NOFOs listed above.

Jun-2027 , 15-Sep-2027 [Optional][LOI/Pre-App], 15-Oct-2027

Synopsis

NIMH solicits clinical trial applications through a series of notices of funding opportunities (NOFOs) that cover the intervention development pipeline, from first-in-human, early testing of new interventions, confirmatory efficacy trials, through to effectiveness trials. The purpose of this NOFO is to support confirmatory efficacy testing of non-pharmacological preventive and therapeutic interventions, and under certain conditions, selected pharmacological interventions for mental disorders in adults and children through an experimental therapeutics approach. Under this NOFO, trials must be designed so that results, whether positive or negative, will provide information of high scientific utility and will support "go/no-go" decisions about further development, effectiveness testing, or dissemination of the intervention. Interventions to be studied include, but are not limited to, behavioral, cognitive, interpersonal, and device-based (both invasive/surgically implanted as well as noninvasive/transcranial) approaches, or a combination thereof. Pharmacological interventions to be studied under this grant mechanism are expected to primarily focus on drugs approved for marketing by the FDA (for any indication). These will include medications off-patent which are undergoing development for a new mental health indication. Confirmatory efficacy trials studying monotherapy, combination treatments, and stepped approaches, including multiple treatment modalities, may be supported. Interventions appropriate for efficacy testing must be based on a compelling scientific rationale, previous demonstration that the intervention engages and alters the hypothesized mechanism of action (target), a preliminary efficacy signal, and must address an unmet therapeutic need. Support will be provided for a trial of the intervention's efficacy that includes measurement of the hypothesized mechanism of action and the relationship between change in the target mechanism and change in functional or clinical effects. Ultimately, this NOFO is intended to support a sufficiently-powered efficacy trial to determine the intervention's potential for significant clinical benefit. Applicants pursuing other stages of the clinical trial pipeline should consider one of the companion NOFOs listed above.

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
---------	---------------	--------------	----------------	---------------	----------------

Synopsis | This Notice of Funding Opportunity (NOFO) encourages research on the biology of high confidence risk factors associated with complex brain disorders, with a focus on the intracellular, transcellular and circuit substrates of neural function. For the purposes of this NOFO , the term “complex” can refer to a multifactorial contribution to risk (e.g., polygenic and/or environmental) and/or highly distributed functional features of the brain disorder. Studies may be either hypothesis-generating (unbiased discovery) or hypothesis-testing in design and may utilize in vivo, in situ, or in vitro experimental paradigms, e.g., model organisms or human cell-based assays. While behavioral paradigms and outcome measures can be incorporated into the research design to facilitate the characterization of intracellular, transcellular and circuit mechanisms, these are neither required nor expected. Studies should not attempt to “model” disorders but instead should aim to elucidate the neurobiological impact of individual or combined risk factor(s), such as the affected molecular and cellular components and their relationships within defined biological process(es). This can include the fundamental biology of these factors, components and processes. The resulting paradigms, component pathways and biological processes should be disseminated with sufficient detail to enrich common and/or federated data resources (e.g., those contributing to the Gene Ontology, Synaptic Gene Ontology, FAIR Data Informatics) in order to bridge the gap between disease risk factors, biological mechanism and therapeutic target identification. The present NOFO (R21 activity code) can be used for applications to develop early stage, high-risk, exploratory approaches or establish proof-of-concept where there is little or no preliminary data. Applicants proposing to develop lines of inquiry where feasibility or proof of concept has been established should apply to the companion R01 NOFO PAR-25-038.

---------	---------------	--------------	----------------	---------------	----------------

Synopsis

The NIH Research Education Program (R25) supports research education activities in the mission areas of the NIH. The overarching goal of this R25 program is to support educational activities that complement and/or enhance the training of a workforce to meet the nation’s biomedical, behavioral and clinical research needs. To accomplish the stated over-arching goal, this FOA will support creative educational activities with a primary focus on: Courses for Skills Development Research Experiences The purpose of this funding opportunity announcement is to encourage applications for the initiation or continuation of nationally available neuroscience research education programs that will significantly advance the mission of NINDS. The primary focus of programs submitted under this FOA should be on intensive hands-on experience that will provide research experience, an in-depth understanding of techniques, analytic approaches and theory, and expertise that is only possible from a nationally organized program. Within the context of gaining expertise primarily through hands-on experience, programs must also include immersive coursework and expert discussion when appropriate. Programs appropriate for this NOFO must include a nationwide recruitment process to encourage applications from prospective participants and an established application and selection process.

biologics-based therapy discovery and development activities from lead optimization through first-in-human clinical trials. This NOFO is a phased, milestone-driven cooperative agreement that involves close collaboration and regular interactions with NIH program staff. Awarded projects will receive funding for investigator-led research activities to be conducted in their own laboratories and assistance from NIH-funded consultants with industry and regulatory experience. Participants may also augment their project through collaboration with NIH-funded contract research organizations that specialize in manufacturing, nonclinical studies, and early phase clinical trials. Recipient institutions will retain their rights to existing intellectual property and are assigned rights to any new IP developed within the program.

Deadline Dates (ALL)	23-May-2026 [Optional][LOI/Pre-App], 22-Jun-2026

**Synopsis** The purpose of this notice of funding opportunity (NOFO) is to support rigorous analytical validation of method(s) used for measuring biomarkers for neurological and neuromuscular disorders for use in clinical trials or clinical practice. Applicants must justify the unmet need for the biomarker(s) and measurement methods and specify one or two context(s) of use for the biomarker(s). Activities supported include optimizing and evaluating the accuracy, precision, reportable range, and analytical sensitivity and specificity of the detection method across multiple sites and operators and establishing reference intervals and quality control procedures. Multi-site applications are expected but not required. This NOFO requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation. Applications that fail to include a PEDP will be considered incomplete and will be withdrawn. Applicants are strongly encouraged to read the NOFO instructions carefully and view the available PEDP guidance material. The NIH recognizes that diverse teams working together and capitalizing on innovative ideas and distinct

perspectives outperform homogeneous teams. There are many benefits that flow from a diverse scientific workforce, including: fostering scientific innovation, enhancing global competitiveness, contributing to robust learning environments, improving the quality of the research, advancing the likelihood that underserved populations participate in, and benefit from research, and enhancing public trust. To support the best science, the NIH encourages inclusivity in research. Examples of structures that promote diverse perspectives include but are not limited to: Transdisciplinary research projects and collaborations among neuroscientists and researchers from fields such as computational biology, physics, engineering, mathematics, computer and data sciences, as well as bioethics. Engagement from different types of institutions and organizations (e.g., research-intensive, undergraduate-focused, minority-serving, community-based). Individual applications and partnerships that enhance geographic and regional heterogeneity. Investigators and teams composed of researchers at different career stages. Participation of individuals from diverse backgrounds, including groups traditionally underrepresented in the biomedical, behavioral, and clinical research workforce (see NOT-OD-20-031), such as underrepresented racial and ethnic groups, those with disabilities, those from disadvantaged backgrounds, and women. Opportunities to enhance the research environment to benefit early- and mid-career investigators.

Deadline Dates (ALL)	23-May-2026 [Optional][LOI/Pre-App], 22-Jun-2026

Synopsis The purpose of this notice of funding opportunity (NOFO) is to enable clinical validation of strong candidate biomarkers for neurological and neuromuscular disorders and conditions. Specifically, the goal of this PAR is to enable the rigorous clinical validation of biomarker measurements within the clinical population of interest to establish the clinical sensitivity and specificity of the biomarker consistent with FDA guidelines. This PAR assumes that 1) a candidate biomarker has already been

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
					identified, 2) detection method technology has already been developed and analytically validated, and 3) the research and/or clinical need and potential context of use has been identified. This NOFO requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation.

Deadline Dates (ALL) 23-May-2026 [Optional][LOI/Pre-App], 22-Jun-2026

Synopsis The purpose of this notice of funding opportunity (NOFO) is to support rigorous development and validation of Digital Health Technology (DHT) derived biomarkers or clinical outcome assessments (COAs) for remote monitoring to fill a defined unmet clinical endpoint for interventional clinical trials. To increase standardization and improve clinical adoption, applicants must propose to develop and evaluate the DHT enabled biomarkers or COAs in three or more diseases or conditions. Applicants must also propose to conduct development studies that are informed by people with lived experience (PWLE) and patient advocacy organizations. The first phase of this funding mechanism is to evaluate the technical performance of the proposed DHTs with PWLE input; the second phase is to support a prospective longitudinal clinical study in representative populations to validate the DHT. Research outcomes should include demonstrating how a meaningful change in the biomarkers or COAs derived from the DHT(s) can be statistically measured and quantified at the individual participant level.

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
---------	---------------	--------------	----------------	---------------	----------------

Deadline Dates (ALL) | 18-Jun-2026 , 19-Oct-2026

Synopsis | This NOFO encourages applications for multi-site exploratory and confirmatory clinical trials focused on promising interventions; biomarker or outcome measure validation studies that are immediately preparatory to trials in stroke prevention, treatment, and recovery; and ancillary studies designed to add scientific aims to active studies being conducted within StrokeNet. Successful applicants will collaborate and conduct the study within the NIH StrokeNet. Following peer review, NINDS will prioritize studies among the highest scoring to be conducted in the NIH StrokeNet infrastructure. The NIH StrokeNet National Coordinating Center (NCC) will work with the successful applicant to implement the proposed study efficiently and the National Data Management Center (NDMC) will provide statistical and data management support. The NIH StrokeNet Regional Coordinating Centers (RCCs) and their affiliated clinical sites will provide recruitment/retention support as well as on-site implementation of the clinical protocol. The NIH StrokeNet network will also be uniquely poised to collaborate with other US and international consortia necessary to conduct larger, definitive trials of promising interventions for stroke treatment, prevention, and recovery. It is NINDS's intent that all NINDS-supported multi-center clinical trials in stroke treatment, recovery, or prevention will be conducted within the NIH StrokeNet. Only in exceptional circumstances will NINDS consider funding multi-site stroke clinical trials outside of this network. This NOFO uses the bi-phasic, milestone driven UG3/UH3 cooperative agreement activity code. Awards made under this NOFO will initially support a one-year milestone-driven planning and start-up phase, with possible transition to an implementation (UH3) phase of up to 6 additional years. Only UG3 projects that meet the scientific milestones and award requirements of the UG3 phase may transition to the UH3 phase. Applications submitted in response to this FOA must address both the UG3 and UH3 phases and are expected to include plans for project management and performance milestones for each phase. Applicants do not need to be part of the existing NIH StrokeNet infrastructure to apply under this NOFO.

Synopsis

This Notice of Funding Opportunity (NOFO) encourages the development and validation of animal models and human/animal tissue ex vivo systems that recapitulate the phenotypic and physiologic characteristics of a defined neurological or neuromuscular disorder. The goal of this NOFO is to promote a significant improvement in the translational relevance of animal models or ex vivo systems that will be utilized to facilitate future development of neurotherapeutics. Models proposed for this NOFO would have the potential to provide feasible and meaningful assessments of efficacy following therapeutic intervention. This NOFO is part of a suite of Innovation Grants to Nurture Initial Translational Efforts (IGNITE) Program focused on enabling the exploratory and early stages of drug discovery. This Notice of Funding Opportunity (NOFO) requires a Plan for Enhancing Diverse Perspectives (PEDP).

Deadline Dates (ALL) 15-Jun-2026

Synopsis

This FOA seeks applications for proof-of-concept testing and development of new technologies and novel approaches for recording and modulation of neural cells and circuits, to address major challenges and enable transformative understanding of dynamic signaling in the central nervous system. Preliminary feasibility data are not required, and it is expected that the proposed research may be high-risk, but if successful could profoundly change the course of neuroscience research. Applications may propose development of instrumentation hardware and/or devices and

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
---------	---------------	--------------	----------------	---------------	----------------

associated software, and/or molecular constructs for sensing and manipulating neural activity. Approaches may utilize any modality such as optical, electrical, magnetic, or acoustic recording/manipulation, to target neuronal electrical signals or other forms of neural activity, including intracellular signaling and engagement of non-neuronal cells in circuit function. A companion FOA (RFA-NS-24-005) is targeted to projects focused on optimization of instrumentation and devices that are later in the development cycle, where iterative optimization and end-user testing is needed. The companion FOA does not allow projects primarily focused on development or optimization of molecular constructs for recording and manipulating neural activity. Projects of this nature are supported by this FOA and other BRAIN Initiative announcements including RFA-MH-22-245, RFA-MH-21-175, and RFA-EY-21-001. For this and the companion FOA, the aim of the proposed technologies should be to reduce major barriers to conducting neurobiological experiments, including considerations of cost and ease of access, and to enable new discoveries for understanding neural circuit function. Technologies should address major challenges associated with recording and modulating CNS activity, at cellular or circuit resolution, and should contribute to an overall ecosystem of technologies spanning multiple spatial and temporal scales in any region throughout the CNS. The approaches should be compatible with experiments in behaving animals, with an expectation that they will be validated with in vivo experiments during the course of the project. Proposed validation experiments must focus on demonstrating the capabilities and potential impact of the technology, rather than advancing the state of biological knowledge as the primary project goal. Applications are encouraged to integrate multiple approaches, and where appropriate, to leverage diverse domains of expertise from biological, chemical, and physical sciences, engineering, computational modeling, and statistical analysis. This FOA requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation. Applications that fail to include a PEDP will be considered incomplete and will be withdrawn.

Synopsis The purpose of this notice of funding opportunity (NOFO) is to invite applications that bundle independent protocols for phase 1 clinical trials with phase 1b/phase 2a clinical trials to streamline the early-stage evaluation of promising pharmacological interventions for Alzheimer's disease (AD) and AD-related dementias (ADRD). Candidate interventions evaluated through this program, which can include small molecules or biologics for example, must engage non-amyloid/non-tau mechanisms and aim to address cognitive and/or neuropsychiatric symptoms in individuals across the spectrum, from pre-symptomatic to more severe stages of disease. This NOFO uses a phased award activity code. Applications must include prespecified, go/no-go safety and tolerability milestones that must be met to advance from phase 1 to latter stages of clinical development.

Deadline Dates (ALL)	05-Jun-2026 , 05-Oct-2026 , 05-Feb-2027

Synopsis The purpose of this funding opportunity is to encourage multidisciplinary investigators to develop new approaches or apply existing approaches in novel ways to measure brain activity, connectivity, genomics, or other aspects across the age spectrum of neurodevelopment. The overarching goal is to extend our understanding of brain development and aging, including studies of the neurodevelopmental origins of later health and disease. Research can include healthy human participants of any age; specific clinical groups such as those with cognitive, motor, or affective regulation challenges; and/or animal research on these domains of function. The studies can focus on longitudinal neuroanatomical or functional changes at any level, including genetics/genomics, single cells, connectomics, neural population activity patterns, and others. This funding opportunity is intended to encourage technological and conceptual innovation to improve repeated measures across longer epochs of the lifespan, to better predict outcomes at later ages. This NOFO requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation. Applications that fail to include a PEDP will be considered incomplete and will be withdrawn. Applicants are strongly encouraged to read the NOFO instructions carefully and view the available PEDP guidance material.

Deadline Dates (ALL)	12-Jun-2026 , 12-Oct-2026 , 12-Feb-2027 , 12-Jun-2027
Synopsis	<p>The purpose of this Notice of Funding Opportunity (NOFO) is to promote diversity in the translational research workforce for Alzheimer's disease and Alzheimer's disease-related dementias (AD/ADRD), including frontotemporal dementia, Lewy body dementia, and vascular dementia. This pathway to independence award will support early career investigators from diverse backgrounds, including those from groups underrepresented in the biomedical sciences, to gain critical translational research skills that they can apply to various aspects of AD/ADRD research (from populations studies to research that can lead to new treatments and diagnostics, including all aspects of behavioral and social research).</p> <p>This program will support highly trained translational researchers as they transition to research independence in the field of AD/ADRD. The long-term goal of this program is to expand the pool of translational researchers who can effectively participate in and/or lead a team-science, interdisciplinary approach to studies of AD/ADRD treatment, prevention, early detection, and disease management and care. This NOFO is designed for candidates proposing research that does not involve leading an independent clinical trial, a clinical trial feasibility study, or an ancillary clinical trial. Under this NOFO, candidates are permitted to propose a research experience in a clinical trial led by a mentor or co-mentor.</p>

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
---------	---------------	--------------	----------------	---------------	----------------

Deadline Dates (ALL) | 16-Jun-2026 , 16-Oct-2026 , 16-Feb-2027

Synopsis | The purpose of this funding opportunity is to encourage multidisciplinary investigators to develop exploratory, highly novel new approaches, or innovative applications of existing approaches, to measure brain activity, connectivity, genomics, or other aspects across the age spectrum of neurodevelopment. The overarching goal is to extend our understanding of brain development and aging, including studies of the neurodevelopmental origins of later health and disease, by improving repeated measures across longer epochs of the lifespan to better predict outcomes at later ages. Research can include healthy human participants of any age; specific clinical groups such those with cognitive, motor, or affective regulation challenges; and/or animal research on these domains of function. The studies can focus on longitudinal neuroanatomical or functional changes at any level, including genetics/genomics, single cells, connectomics, neural population activity patterns, and others. This funding opportunity is intended to encourage technological and conceptual innovation through this high risk, high reward funding mechanism to develop highly innovative ideas that either lack preliminary data or need additional preliminary data. This NOFO requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation. Applications that fail to include a PEDP will be considered incomplete and will be withdrawn. Applicants are strongly encouraged to read the NOFO instructions carefully and view the available PEDP guidance material.

mentorship, and career development activities in support of new or emerging areas of aging and/or AD/ABDR research. These may include, but are not limited to, courses, curricula, research support, pilot funding, travel awards, visiting scholars, or networks. This Notice of Funding Opportunity (NOFO) is designed specifically for applicants proposing research that does not involve leading an independent clinical trial, a clinical trial feasibility study, or an ancillary clinical trial. Under this NOFO applicants are permitted to propose a research experience in a clinical trial led by a mentor or co-mentor. Those proposing a clinical trial or an ancillary clinical trial as lead investigator, should apply to the companion NOFO (FON).

research that advances (1) prevention approaches to reduce prenatal alcohol exposure and the incidence of FASD and (2) interventions for FASD. These objectives will be accomplished with the Exploratory/Developmental Phased Award (R61/R33) mechanism, clinical trial optional. The R61 phase will support pilot studies or secondary data analysis for hypothesis development and feasibility, and research testing the hypotheses can be expanded in the R33 phase. The transition to the R33 phase will be determined by NIAAA program staff after evaluation of the achievement of specific milestones set for the R61 phase. Highest priority will be given to applications with clinical trials. Applicants interested in planning clinical trials or adding to current projects may also consider NOFO (PAR-25-159, the R34 option).

 Deadline Dates (ALL) | 03-Jun-2026 , 01-Oct-2026

Synopsis | This funding opportunity aims to support the development of in vivo high-resolution structural and functional imaging technologies for the living human inner ear. Proposed projects should focus on improving the resolution of current imaging techniques or developing new imaging techniques that can visualize inner ear structures in vivo with significantly greater detail and accuracy than currently possible. Both structural and functional aspects, including visualizing dynamic elements are important to the development of new and improved techniques. Projects may also focus on developing new imaging probes or contrast agents that can enhance visualization of the inner ear structures. Research supported in response to this funding opportunity is expected to significantly advance the ability to visualize auditory and vestibular components, such as hair cells, otoliths, membranes, ions, and vasculature, in detail in awake patients in a clinical setting using non-invasive techniques. To achieve this goal, a multidisciplinary team approach that takes advantage of the expertise of each team member is highly encouraged. Studies in humans and intermediate studies in mammalian animal models may be proposed to develop or advance the needed technology. Any intermediate studies must articulate a clear path of the proposed methodology to application in awake humans or define the limitations and the usefulness in anesthetized humans. This notice of funding opportunity announcement (NOFO) also supports investigator initiated low-risk clinical trials addressing the development or improvement of human in vivo structural and functional imaging technologies. Clinical trials must meet ALL the following criteria: meet the budget limits of this NOFO, not require FDA oversight, not be an NIH-defined Phase III Clinical Trial, have low risks to subjects, and intend to gather scientific data/evidence to inform subsequent studies. This NOFO also supports low-risk trials determined to be Basic Experimental Studies with Humans (BESH). These studies fall within the NIH definition of a clinical trial and meet the definition of basic research. Only one clinical trial is allowed in each application. High-risk clinical trials not meeting all the criteria above are referred to the companion U01 Cooperative Agreement for In Vivo High-Resolution Imaging for Inner Ear Visualization (Clinical Trial required) NOFO RFA-DC-25-003.

Synopsis

This funding opportunity aims to support high risk clinical trials for the development of in vivo high-resolution structural and functional imaging technologies for the living human inner ear. Proposed projects should focus on improving the resolution of current imaging techniques or developing new imaging techniques that can visualize inner ear structures in vivo with significantly greater detail and accuracy than currently possible. Structural and functional aspects, including visualizing dynamic elements, are important to developing new and improved techniques. Projects may also focus on developing new imaging probes or contrast agents that can enhance visualization of the inner ear structures. Research supported in response to this funding opportunity is expected to significantly advance the ability to visualize auditory and vestibular components, such as hair cells, otoliths, membranes, ions, and vasculature, in detail in awake patients in a clinical setting using non-invasive techniques. To achieve this goal, a multidisciplinary team approach that takes advantage of the expertise of each team member is highly encouraged. Studies in humans must be proposed to develop, advance, or test the needed technology. Any intermediate studies must articulate a clear path of the proposed methodology to application in awake humans or define the limitations and the usefulness in anesthetized humans. This funding opportunity supports a cooperative agreement between an NIDCD Project Scientist and an Investigator to support a clinical trial that meets ANY of the following criteria: requires FDA oversight, is intended to formally establish efficacy, or has potentially higher risks to participants. These investigator-initiated clinical trials are perceived to benefit from close interaction, oversight, and guidance resulting from a cooperative agreement. Only one clinical trial may be proposed per application submitted to this funding opportunity. Low risk clinical trials not meeting any of the criteria above are referred to the companion In Vivo High-Resolution Imaging for Inner Ear Visualization (R01 - Clinical Trial Optional) RFA-DC-25-005. Investigators are strongly

Synopsis This Notice of Funding Opportunity (NOFO) provides an avenue for basic scientists, clinicians, and clinical scientists to jointly initiate and conduct research projects that translate basic research findings into clinical practice for better human health. The scope of this NOFO includes a range of activities that will impact the diagnosis, treatment, and prevention of disorders within NIDCD's scientific mission. Connection to the clinical condition must be clearly established and the outcomes of the proposed work must have the potential for practical clinical impact in the near term. Given the emphasis on translation to clinical practice, early engagement with end users (e.g., practicing clinicians, patients) in real-world environments in which these approaches will be employed is expected.

Synopsis The NIDCD is committed to identifying effective interventions for the treatment or prevention of communication disorders by supporting well-designed and well-executed clinical trials. This funding opportunity supports a cooperative agreement between an NIDCD Project Scientist and an Investigator to support a clinical trial that meets ANY of the following criteria: requires FDA oversight, is intended to formally establish efficacy, or has potentially higher risks to participants. Clinical trial applications exceeding the annual direct costs of \$700,000 or more, in certain cases, may also be a criterion for this funding opportunity. These investigator-initiated clinical trials are perceived to benefit from close interaction, oversight, and guidance resulting from a cooperative agreement. Only one clinical trial may be proposed per application submitted to this funding opportunity.

Synopsis

The NIDCD Early Career Research (ECR) Award (R21) is intended to support both basic and clinical research from scientists who are beginning to establish an independent research career. It cannot be used for thesis or dissertation research. The research must be focused on one or more of the areas within the biomedical and behavioral scientific mission of the NIDCD: hearing, balance, smell, taste, voice, speech, or language. The NIDCD ECR Award R21 grant mechanism supports different types of projects including secondary analysis of existing data; small, self-contained research projects; development of research methodology; translational research; outcomes research; and development of new research technology. Irrespective of the type of project, the intent of the NIDCD ECR Award R21 is for the Program Director(s)/Principal Investigator(s) (PD(s)/PI(s)) to obtain sufficient preliminary data for a subsequent R01 application.

Synopsis

The purpose of the NIDCD Research Career Enhancement Award for Established Investigators (K18) program is to enable established, proven investigators to augment or redirect their research programs through the acquisition of new research skills to answer questions relevant to the hearing, balance, smell, taste, voice, speech and language sciences. This Funding Opportunity Announcement is for basic science experimental studies involving humans, referred to in NOT-OD-18-212 as “prospective basic science studies involving human participants.” These studies fall within the NIH definition of a clinical trial and also meet the definition of basic research. Types of studies that should submit under this FOA include studies that prospectively assign human participants to conditions (i.e., experimentally manipulate independent variables) and that assess biomedical or behavioral outcomes in humans for the purpose of understanding the fundamental aspects of phenomena without specific application towards processes or products in mind. Applicants not planning an independent clinical trial or basic experimental study with humans, or proposing to gain research experience in a clinical trial or basic experimental study with humans led by another investigator, must apply to the 'Independent Clinical Trial Not Allowed' companion NOFO. The proposed project must be related to the programmatic interests of one or more of the participating NIH Institutes and Centers (ICs) based on their scientific missions. This Notice of Funding Opportunity (NOFO) is designed specifically for applicants proposing to serve as the lead investigator of an independent clinical trial, a clinical trial feasibility study, or a separate ancillary study to an existing trial, as part of their research and career development. Applicants not planning an independent clinical trial, or proposing to gain research experience in a clinical trial led by another investigator, must apply to companion NOFOs PAR-24-140 and PAR-24-143

Synopsis | The goal of this Notice of Funding Opportunity (NOFO) is to support doctoral candidates from a variety of academic disciplines for up to two years for the completion of the doctoral dissertation research project. Research projects should align with the NIDA Strategic Plan (2022-2026 NIDA Strategic Plan Director's Message | National Institute on Drug Abuse (NIDA) (nih.gov). This award will facilitate the entry of promising new investigators into the field of substance use/substance use disorder (SU(D) research, enhancing the pool of highly talented SU(D) researchers. Applications are particularly encouraged from individuals from diverse backgrounds, including those from underrepresented groups as described in the Notice of NIH's Interest in Diversity (NOT-OD-20-031). This NOFO is designed specifically for applicants proposing research that does not involve leading an independent clinical trial, a clinical trial feasibility study, or an ancillary clinical trial. Applicants to this NOFO are permitted to propose research experience in a clinical trial led by a mentor or co-mentor.

 Deadline Dates (ALL) | 18-Jun-2026

Synopsis | The National Center for Advancing Translational Sciences (NCATS) invites applications for the Awards Supporting Cutting-Edge Technologies for Translational Science (ASCETTS) Notice of Funding Opportunity (NOFO) to foster investigator-initiated development of highly innovative technologies to address barriers, limitations, or bottlenecks in translational science – particularly for therapeutic development. This program will support the early-stage proof of concept, high-risk and potentially high-reward studies for feasibility and exploratory technology development, which can transform or significantly improve the efficiency of therapeutic development to achieve NCATS ultimate goals - more treatments to all people more quickly. The research proposed should be for the development of technology that can break new ground or extend present technology toward new directions or novel applications. With this initiative, we expect to support the development and/or prototyping of new technologies that will lead to improved efficiency in the therapeutic development pipeline.

	<p>Contact Email <a href="mailto:BRAIN-FOAs@nih.gov">BRAIN-FOAs@nih.gov</a></p> <p>Sponsor Website</p> <p>Program URL <a href="#">Link to program URL</a></p> <p>Deadline Dates (ALL) 15-Jun-2026</p> <p>Synopsis                      This NOFO seeks applications for unique and innovative recording and/or modulation technologies that are in the earliest stage of development, including new and untested ideas that are in the initial stages of conceptualization. Some projects may aim to increase recording or modulation capabilities by many orders of magnitude, while others may aim to improve the precision and selectivity of recording or modulation (also referred to as stimulation, perturbation, or manipulation). A wide range of modalities are appropriate including acoustic, chemical, electrical, magnetic, and optical, as well as the use of genetic tools. Invasive or non-invasive approaches are sought that will enable large-scale recording and/or precise manipulation of neural activity, and that would ultimately be compatible with experiments in humans or behaving animals. Applications are encouraged from any qualified individual, including chemists, physicists, engineers, theoreticians, materials scientists, and others from fields not typically involved with neuroscience research. This NOFO requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation. Applications that fail to include a PEDP will be considered incomplete and will be withdrawn.</p>

are not limited to empirical qualitative and quantitative methods, and conceptual, legal, and normative analyses. Applied research designed to address ELSI issues in genetics and genomics will also be considered responsive. Direct engagement with communities and other interested groups is encouraged, but not required. Plan for Enhancing Diverse Perspectives The NIH recognizes that diverse teams working together and capitalizing on innovative ideas and distinct perspectives outperform homogeneous teams. There are many benefits that flow from a diverse scientific workforce, including: fostering scientific innovation, enhancing global competitiveness, contributing to robust learning environments, improving the quality of the research, advancing the likelihood that underserved populations participate in, and benefit from research, and enhancing public trust. To support the best science, the NIH encourages inclusivity in research. Examples of structures that promote diverse perspectives include but are not limited to: Transdisciplinary research projects and collaborations among researchers from fields such as computational biology, physics, engineering, mathematics, computer and data sciences, as well as bioethics. Engagement from different types of institutions and organizations (e.g., research-intensive, undergraduate-focused, minority-serving, community-based). Individual applications and partnerships that enhance geographic and regional heterogeneity. Investigators and teams composed of researchers at different career stages. Participation of individuals from diverse backgrounds, including groups traditionally underrepresented in the biomedical, behavioral, and clinical research workforce (see NOT-OD-20-031), such as underrepresented racial and ethnic groups, those with disabilities, those from disadvantaged backgrounds, and women. Opportunities to enhance the research environment to benefit early- and mid-career investigators. This NOFO requires a Plan for Enhancing Diverse Perspectives (PEDP), which will be assessed as part of the scientific and technical peer review evaluation. Applications that fail to include a PEDP will be considered incomplete and will be withdrawn. Applicants are strongly encouraged to read the NOFO instructions carefully and view the available PEDP guidance material.

Synopsis

This Notice of Funding Opportunity (NOFO) invites Exploratory/Developmental Research Grant (R21) applications that propose to study the ethical, legal and social implications (ELSI) of human genetic or genomic research. Applications may propose studies using either single or mixed methods, that break new ground, extend previous discoveries in new directions, or develop preliminary data in preparation for larger studies. Approaches may include but are not limited to empirical qualitative and quantitative methods, and conceptual, legal, and normative analyses. Applied research designed to address ELSI issues in genetics and genomics will also be considered responsive. Direct engagement with communities and other stakeholders is encouraged, but not required.

Synopsis

The purpose of the Research Enhancement Award Program (REAP) for Health Professional Schools and Graduate Schools is to support small scale research grants at institutions that do not receive substantial funding from the NIH, with an emphasis on providing biomedical research experiences primarily for health professional, undergraduate and graduate students and enhancing the research environment at applicant institutions. Eligible institutions must award baccalaureate or advanced science degrees and have received no more than \$6 million dollars per year of NIH support (in both direct and F&A/indirect costs) in 4 of the last 7 fiscal years. For institutions composed of multiple schools and colleges, the \$6 million funding limit is based on the amount of NIH funding received by all the schools and colleges within the institution as a whole. Deadline Dates (ALL)	25-Jun-2026 , 25-Oct-2026 , 25-Feb-2027 , 25-Jun-2027 , 25-Oct-2027
Synopsis	<p>The purpose of this notice of funding opportunity (NOFO) is to: accelerate innovative drug and device discovery; develop pharmacologic and neuromodulatory tools for basic and clinical research on mental health, develop and validate tools (pharmacologic or neurostimulation) in support of experimental therapeutic studies of innovative new candidates for mental disorders, and support early-stage human studies to rapidly assess the safety, tolerability, and pharmacodynamics of promising drug candidates/devices and new indications for novel Investigational New Drug (IND)-ready agents or Investigational Device Exemption (IDE)-ready devices for the treatment of mental disorders. This NOFO encourages applications to advance the discovery, preclinical development, and proof of concept (PoC) testing of new, rationally based candidate agents and neurostimulation approaches to treat mental disorders and to develop novel ligands and circuit-engagement devices as tools to further characterize existing or to validate new drug/device targets. Partnerships between academia and industry are strongly encouraged. This NOFO supports a research program of multiple projects directed toward a specific major objective, basic theme or program goal, requiring a broadly based, multidisciplinary, and often long-term approach. Projects seeking support for a discrete, specified, circumscribed project to be performed by the named investigator(s) in an area representing his or her specific interest and competencies should consider the companion NOFO (PAR-25-352). This NOFO will also support applications proposing preclinical discovery of biotechnology products and biologics with potential as candidate therapeutics including, but not limited to, large biologic macromolecules, (e.g., proteins, antibodies, and peptides), gene-based therapies (i.e., oligonucleotide- and viral vector-</p>

Synopsis	The Office of Disease Prevention (ODP) and participating National Institutes of Health (NIH) Institutes, Centers, and Offices (ICOs) are issuing this NOFO seeking applications to test innovative approaches to implementing SBIRT/P for alcohol, tobacco, and other drugs (ATOD) use and misuse in adult populations that experience health disparities. SBIRT/P, (a term used for purposes of this funding announcement), involves screening individuals for risk of ATOD use and misuse, briefly intervening with a conversation about harmful substance use, and referring individuals for treatment or preventive services, as needed. Proposed research should include prospective tests of SBIRT/P and should leverage collaborations with healthcare and community partners Specific research interests of participating NIH ICOs are detailed within.

---------	---------------	--------------	----------------	---------------	----------------

Deadline Dates (ALL) 05-Jun-2026 , 05-Oct-2026

Synopsis This Notice of Funding Opportunity (NOFO) aims to support research on interdisciplinary population approaches to increasing awareness of the relationship between alcohol and cancer risk, understanding and changing social norms related to alcohol consumption, developing and/or evaluating alcohol policy approaches, and the development, testing, and implementation of population-level interventions to reduce alcohol-related cancer risk. Applications that address multiple levels of consumption, such as moderate and heavy drinking, are of particular interest, as well as those focusing on alcohol use disorder (AUD) from the perspective of cancer prevention and control. Proposals addressing understudied areas are encouraged, as is attention to underrepresented minority (URM) populations experiencing cancer and alcohol-related disparities such as American Indian, Alaskan Native, and sexual and gender minority populations.

Synopsis This Notice of Funding Opportunity (NOFO) encourages applications that will expand knowledge of the natural history of disorders that currently are, or may become, part of statewide newborn screening programs. A comprehensive understanding of the natural history of a condition is necessary to facilitate appropriate interventions for infants identified by newborn screening. Characterization of the sequence and timing of symptom development provides information crucial for developing targeted, age-appropriate treatments and for establishing a baseline against which to assess novel interventions. In addition, for some conditions, establishment of genotype-phenotype correlations may facilitate prediction of the clinical course; for others, identification of modifying genetic,

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
	<p>epigenetic, or environmental factors may enhance understanding of clinical outcomes. Comprehensive data on the natural history of a condition will facilitate the field's ability to: 1) identify the underlying biological mechanisms; 2) understand the genetic and clinical heterogeneity and phenotypic expression of the condition; 3) improve diagnostic accuracy; 4) facilitate clinical trials by providing comprehensive natural history data; 5) prevent, manage, and treat symptoms and complications of the condition; 6) furnish physicians and families with needed support and predictive information about the condition; and 7) establish data collection systems or patient registries to collect longitudinal data (e.g., child/family outcomes following newborn screening).</p>

Deadline Dates (ALL) | 05-Jun-2026 , 05-Oct-2026 , 05-Feb-2027 , 05-Jun-2027 , 05-Oct-2027

Synopsis | The purpose of this Funding Opportunity Announcement (FOA) is to stimulate efforts to translate scientific discoveries and engineering developments into methods or tools that address problems in basic research to understand disease, or in applied research to assess risk, detect, prevent, diagnose, treat, and/or manage disease. The rationale is to deliver new capabilities to meet evolving requirements for technologies and methods relevant to the advance of research and delivery of care in pre-clinical, clinical and non-clinical settings, domestic or foreign, for conditions and diseases within the missions of participating institutes. This FOA specifies a partnership structure that is expected to help bridge gaps in knowledge and experience by engaging the strengths of academic, industrial, and other investigators. The partners on each application should establish an inter-disciplinary, multi-institutional research team to work in strategic alliance to implement a coherent strategy to develop and translate a solution to their chosen problem. They are expected to plan, design, and validate that the solution will be suitable for end users. Each partnership should include at least one academic and one industrial organization. Each partnership should plan to transition a technology, method, assay, device, and/or system from a demonstration of possibility to a status useful in the chosen setting. Funding may be requested to enhance, adapt, optimize, validate, and otherwise translate technologies that address problems in biology, pathology, risk assessment, diagnosis, treatment, and/or monitoring of disease status. This FOA defines "innovation" as likelihood to deliver a new capability to end users.

133058	<a href="#">Mind and Body Interventions to Restore Whole Person Health via Emotional Well-Being Mechanisms (R61/R33 Clinical Trial Required)</a>	National Institutes of Health/DHHS	PAR-25-449	08-Jun-2026	2,375,000 USD

The NOFO will support rigorous and well-powered human mechanistic research studies that are supported by strong preliminary data. The studies should examine the effects of mind and body interventions on innovative mechanisms of EWB (as the primary outcome), as well as the associated relationship with the Whole Person Health Index (WPHI, as a secondary outcome). To enhance research safety, rigor, and efficiency of NIH-funded mechanistic clinical trials, this initiative will use a two-phased award funding mechanism (R61/R33). The funding will support an initial phase (R61) to establish feasibility benchmarks for a subsequent proposed second phase (R33) mechanistic clinical trial, which will be contingent upon successful achievement of R61 benchmarks ("Go/No-Go Criteria"). Applications should provide preliminary data that are comparable in quality and quantity to those expected for an R01 application.</p>

 Deadline Dates (ALL) | 05-Jun-2026

Synopsis | Through this Notice of Funding Opportunity (NOFO), the National Cancer Institute (NCI) along with other participating Institutes encourages submission of applications proposing to conduct secondary data analysis and integration of existing datasets and database resources, with the ultimate aim to elucidate cancer risk and related outcomes (e.g., risk prediction or reduction, survival, or response to treatment, etc.). The goal of this initiative is to address key scientific questions relevant to cancer by supporting the analysis of existing clinical, environmental, surveillance, health services, vital statistics, behavioral, lifestyle, genomic, and molecular profiles data. Applicants are encouraged to leverage and perform innovative analyses of the existing data. Applications may include new research aims that are being addressed with existing data, new or advanced methods of analyses, or novel combinations and integration of datasets that allow the exploration of important scientific questions in cancer research.

Synopsis The purpose of this Notice of Funding Opportunity (NOFO) is to advance the development of novel informatics and data science approaches that can help individuals understand and improve their health through actionable insights. The NLM and participating institutes listed in this NOFO seek applications that further the science of personal health informatics by providing meaningful and actionable insights to individuals through innovative personal health data collection, integration, analysis, and personalized risk assessments and interpretation. Applications seeking to advance the understanding of how informatics tools, systems, and platforms can best present the results, interpretation, and limitations of personalized assessments for the benefit of individuals are encouraged. Applications should include end user engaged approaches and real-world evaluation to inform the design of generalizable, reusable, and scalable personal health informatics tools, systems, and platforms for the benefit of individuals in understanding and improving their health.

Synopsis The purpose of this funding opportunity announcement (FOA) is to invite applications for a broad range of research efforts in computational genomics, data science, statistics, and bioinformatics relevant to one or both of basic or clinical genomic science, and broadly applicable to human health and disease. This FOA supports fundamental genomics research that develops innovative analytical methodologies and approaches, early-stage development of tools and software, and refinement or

---------	---------------	--------------	----------------	---------------	----------------

Lung, Blood, and Sleep (HLBS) disorders. No funding will be provided under this NOFO. The genomic data and related phenotypic data will be deposited in a public NIH-designated controlled-access database such as the database for Genotypes and Phenotypes (dbGaP) and NHLBI's BioData Catalyst (BDC). The overall goal is to move from simply cataloging genetic associations to understanding how genetic factors contribute to HLBS diseases at the molecular and cellular levels. This transformation will help move TOPMed from genetic Map to Mechanism with potential applications of AI and ML tool sets where possible, enabling functional genomics research that will accelerate mechanistic personalized medicine.

133989	<a href="#">The Metastasis Research Network (MetNet): MetNet Research Projects (U01 Clinical Trial Not Allowed)</a>	National Institutes of Health/DHHS	PAR-26-134	05-Jun-2026	2,500,000 USD

**Synopsis** The National Cancer Institute's (NCI) Metastasis Research Network (MetNet) is a collection of U54 Research Centers that support using systems-level approaches to understand pressing questions in metastasis. The overall goal of the MetNet is to advance our understanding of metastasis as a whole body, systems-level problem to develop a comprehensive and cohesive picture of the processes involved. Through this Funding Opportunity Announcement (FOA), the NCI invites applications for MetNet Research Projects. These Research Projects should be defined as discrete entities that use systems-level approaches to address gaps and opportunities in metastasis research to integrate into the MetNet and complement ongoing research across the Network.

	Synopsis	The purpose of the NIDCR Dual Degree Dentist Scientist Pathway to Independence Award (K99/R00) program is to develop and maintain a strong cohort of independently funded dentist scientists dedicated to improving dental, oral and craniofacial health. This program is designed to facilitate a timely transition of outstanding dual degree dentist scientists from mentored, postdoctoral research positions to independent, tenure-track or equivalent faculty positions by providing support for two years of mentored training and three to five years of independent research. An option for five years of independent (R00) support is available to accommodate clinical training in a dental specialty program at no more than 3 person-months (25% full-time professional effort) in any year of the R00 phase. This Notice of Funding Opportunity (NOFO) is designed specifically for candidates proposing research that does not involve leading an independent clinical trial, a clinical trial feasibility study, or an ancillary clinical trial. Under this NOFO, candidates are permitted to propose a research experience in a clinical trial led by a mentor or co-mentor.

Synopsis The National Library of Medicine (NLM) seeks applications for research projects that drive groundbreaking innovation and advanced development in the fields of bioinformatics, translational bioinformatics, and computational biology. The primary goal of this initiative is to support the creation and implementation of cutting-edge methods, tools, and approaches that can transform the landscape of biomedical data science. This NOFO aims to address the growing need to leverage transformative technologies - such as artificial intelligence (AI), machine learning, and large-scale computational

	Synopsis	<p>The National Library of Medicine (NLM) seeks applications for innovative research in clinical informatics. The overarching goal of this forthcoming program is to catalyze the development and advancement of novel informatics methodologies that empower clinicians, patients, and the broader public to better understand, manage, and improve health and health care delivery. This NOFO will support research focused on the design, implementation, and evaluation of clinical informatics tools and methods that enable data-driven discovery, promote evidence-based decision-making, and support personalized and precision health care. Emphasis will be placed on domain-independent, scalable, and reusable/reproducible approaches for the discovery, analysis, organization, and management of health-related digital objects-including electronic health records (EHRs), clinical notes, imaging data, and patient-generated data. The aim is to transform raw and heterogeneous health data into actionable knowledge, to develop innovative tools, and to implement practical applications that can be generalized across multiple clinical settings and populations. Projects should demonstrate the potential to accelerate scientific insights, improve clinical workflows, and ultimately lead to improved health outcomes.</p>

Deadline Dates (ALL) 07-May-2026 , 12-Jun-2026 , 07-Sep-2026 , 12-Oct-2026 , 07-Jan-2027 , 12-Feb-2027 , 07-May-2027

Synopsis

The purpose of the NIH Pathway to Independence Award (K99/R00) program is to facilitate a timely transition of outstanding postdoctoral researchers with a research and/or clinical doctorate degree from mentored, postdoctoral research positions to independent, tenure-track or equivalent faculty positions. The program will provide independent NIH research support during this transition in order to help awardees to launch competitive, independent research careers. This Parent Announcement is for basic science experimental studies involving humans, referred to in NOT-OD-18-212 as “prospective basic science studies involving human participants.” These studies fall within the NIH definition of a clinical trial and also meet the definition of basic research. Types of studies that should be submitted under this NOFO include studies that prospectively assign human participants to conditions (i.e., experimentally manipulate independent variables) and that assess biomedical or behavioral outcomes in humans for the purpose of understanding the fundamental aspects of phenomena without specific application towards processes or products in mind. Applicants not planning an independent clinical trial or basic experimental study with humans, or proposing to gain research experience in a clinical trial or basic experimental study with humans led by another investigator, must apply to the 'Independent Clinical Trial Not Allowed' companion NOFO. The proposed project must be related to the programmatic interests of one or more of the participating NIH Institutes and Centers (ICs) based on their scientific missions.

 Deadline Dates (ALL) | 16-Jun-2026

Synopsis | The purpose of this Notice of Funding Opportunity (NOFO) is to encourage research that addresses the link between social disconnection in late-life and late-life suicidal thoughts and behaviors. Of specific interest is research that identifies mechanisms by which social disconnection confers risk for, and social integration protects against, suicidal thoughts and behaviors in late life. Mechanisms to be considered exist at multiple levels of analysis, including but not limited to neurobiological, behavioral, and environmental. This NOFO solicits R21 applications, while the companion announcement PAR-25-067 solicits R01 applications. High risk/high payoff projects that lack preliminary data may be most appropriate for this R21 mechanism, while applications with preliminary data should apply to the R01 mechanism.

## NIH Funding Opportunities

SPIN ID	Program Title	Sponsor Name	Sponsor Number	Deadline Date	Funding Amount
---------	---------------	--------------	----------------	---------------	----------------

Synopsis | Through this Notice of Funding Opportunity (NOFO), the National Cancer Institute (NCI) along with other participating Institutes encourages submission of applications proposing to conduct secondary data analysis and integration of existing datasets and database resources, with the ultimate aim to elucidate cancer risk and related outcomes (e.g., risk prediction or reduction, survival, or response to treatment, etc.). The goal of this initiative is to address key scientific questions relevant to cancer by supporting the analysis of existing clinical, environmental, surveillance, health services, vital statistics, behavioral, lifestyle, genomic, and molecular profiles data. Applicants are encouraged to leverage and perform innovative analyses of the existing data. Applications may include new research aims that are being addressed with existing data, new or advanced methods of analyses, or novel combinations and integration of datasets that allow the exploration of important scientific questions in cancer research.

 Deadline Dates (ALL) | 18-Jun-2026 , 16-Oct-2026

Synopsis | This Notice of Funding Opportunity (NOFO) invites Small Research Grant (R03) applications that propose to study the ethical, legal and social implications (ELSI) of human genetic or genomic research. These applications should be for small, self-contained research projects, such as those that involve single investigators. Of particular interest are projects that propose normative or conceptual analyses, including focused legal, economic, philosophical, anthropological, or historical analyses of new or emerging issues. This mechanism can also be used for the collection of preliminary data and the secondary analysis of existing data. Applications may propose studies using either single or mixed methods. Applied research designed to address ELSI issues in genetics and genomics will also be considered responsive. Direct engagement with communities and other stakeholders is encouraged, but not required.

116940	<a href="#">RFA-NS-25-017 -- BRAIN Initiative: Optimization of Instrumentation and Device Technologies for Recording and Modulation in the Nervous System (U01 Clinical Trials Not Allowed)</a>	National Institutes of Health/DHHS		RFA-NS-25-017	15-Jun-2026	Not Specified
	<p>Contact Name Grace M. Hwang, PhD</p> <p>Contact Telephone</p> <p>Contact Email <a href="mailto:BRAIN-FOAs@nih.gov">BRAIN-FOAs@nih.gov</a></p> <p>Sponsor Website</p> <p>Program URL <a href="#">Link to program URL</a></p> <p>Deadline Dates (ALL) 15-Jun-2026</p> <p>Synopsis</p> <p>This Notice of Funding Opportunity (NOFO) seeks applications to optimize instrumentation and device technologies for recording and modulation of neural cells and circuits, to address major challenges and to enable transformative understanding of dynamic signaling in the central nervous system. It is expected that the proposed technologies and approaches have previously demonstrated their transformative potential through initial proof-of-concept testing, and are ready for accelerated refinement through iterative engineering and end-user feedback, appropriate for a path towards sustainable dissemination and user-friendly incorporation into routine neuroscience research. Applications may propose development of instrumentation hardware and/or devices and associated software. Approaches may utilize any modality such as optical, electrical, magnetic, or acoustic recording/manipulation, to target neuronal electrical signals or other forms of neural activity, including intracellular signaling and engagement of non-neuronal cells in circuit function. This NOFO is a re-issue of RFA-NS-21-027, but unlike the previous NOFO the focus is narrowed to technologies associated with recording/manipulation instrumentation and devices, and excludes projects primarily focused on development of molecular reagents. Potential applicants primarily optimizing molecular constructs should consider RFA-MH-22-245 (or its reissue), BRAIN Initiative: Engineering and optimization of molecular technologies for functional dissection of neural circuits (UM1 Clinical Trial Not Allowed). For projects at an earlier stage of development of molecular reagents, potential applicants should consider the companion FOA (RFA-NS-25-018) or alternative BRAIN Initiative announcements including RFA-MH-21-175 and RFA-EY-21-001 (or their reissues). For this and the companion NOFO, the aim of the proposed technologies should be to reduce major barriers to conducting neurobiological experiments, including considerations of cost and ease of access, and to enable new discoveries for understanding neural circuit function. Technologies should address major challenges associated with recording and modulating CNS activity, at cellular or circuit resolution, and should contribute to an overall ecosystem of technologies spanning multiple spatial and temporal scales in any region throughout the CNS. The approaches should be compatible with experiments in behaving animals, with an expectation that they will be validated with in vivo experiments during the course of the project. Proposed validation experiments must focus on demonstrating the capabilities and potential impact of the technology, rather than advancing the state of biological knowledge as the primary project goal. Applications are encouraged to integrate multiple approaches, and</p>

 Deadline Dates (ALL) | 06-Jun-2026 , 08-Jul-2026

Synopsis | This Notice of Funding Opportunity (NOFO) encourages applications for multi-center clinical trials focused on neurological emergencies. Successful applicants will collaborate and conduct the trial within the NIH SIREN Network. The NIH SIREN Clinical Coordinating Center (CCC) will work with the successful applicants to implement the proposed trial efficiently and the SIREN Data Coordinating Center (DCC) will provide statistical and data management support. The NIH SIREN hubs and their affiliated clinical sites will provide on-site implementation of the clinical protocols. Applicants do not need to be part of the existing SIREN infrastructure to apply under this NOFO. The NIH SIREN Network will also be uniquely poised to collaborate with other U.S. and international consortia necessary to conduct larger, definitive trials of promising interventions for neurological emergencies. Multi-center clinical trials in stroke treatment, recovery, or prevention supported by NINDS will be conducted in the NIH StrokeNet, and not within SIREN.

Synopsis The purpose of the NIA Career Transition Award (CTA) is to facilitate the transition of mentored, postdoctoral researchers to tenure-track or equivalent faculty positions conducting research that advances the mission of NIA. This award does not provide postdoctoral phase funding; therefore, candidates should be prepared to transition to tenure-track or equivalent faculty positions within 12 months after confirmation of a positive funding decision. After transition to an approved faculty position at an extramural institution/organization, the award will provide three years of protected research time through salary and research support. This Notice of Funding Opportunity (NOFO) is designed specifically for candidates proposing research that does not involve leading an independent clinical trial, a clinical trial feasibility study, or an ancillary clinical trial.

Synopsis

This Notice of Funding Opportunity (NOFO) supports applications to develop and conduct investigator-initiated single site clinical trials including efficacy, comparative effectiveness, pragmatic and/or dissemination and implementation science clinical trials. Trials using innovative designs such as platform trials, adaptive, and Bayesian designs are encouraged. These trials may include ones that test different therapeutic, behavioral, dissemination and implementation science clinical trials and/or prevention strategies. Trials for which this NOFO applies must be relevant to the research mission of the NHLBI and meet the NIH definition of a clinical trial (see NOT-OD-15-015). For additional information about the mission, strategic vision, and research priorities of the NHLBI, applicants are encouraged to consult the NHLBI website. This NOFO will utilize a bi-phasic, milestone-driven mechanism of award. The objective of the application is to present the scientific rationale for the clinical trial and a comprehensive scientific and operational plan that describes it. The application should address project management, participant recruitment and retention, performance milestones, scientific conduct of the trial, and dissemination of results. The multiple PD/PI model is strongly encouraged but not required. Applicants are encouraged to include a PD/PI with expertise in biostatistics, clinical trial design, and coordination. The application should also describe its approaches to increase community engagement from conceptual design of the intervention through implementation and sustainability, close gaps in health outcomes within the US population, and increase health for all.

Deadline Dates (ALL)	07-May-2026 , 12-Jun-2026 , 07-Sep-2026 , 12-Oct-2026 , 07-Jan-2027 , 12-Feb-2027 , 07-May-2027
Synopsis	<p>The purpose of the Mentored Quantitative Research Career Development Award (K25) is to attract to NIH-relevant research those investigators whose quantitative science and engineering research has thus far not been focused primarily on questions of health and disease. The K25 award will provide support and "protected time" for a period of supervised study and research for productive professionals with quantitative (e.g., mathematics, statistics, economics, computer science, imaging science, informatics, physics, chemistry) and engineering backgrounds to integrate their expertise with NIH-relevant research. This Parent Announcement is for basic science experimental studies involving humans, referred to in NOT-OD-18-212 as "prospective basic science studies involving human participants." These studies fall within the NIH definition of a clinical trial and also meet the definition of basic research. Types of studies that should be submitted under this NOFO include studies that prospectively assign human participants to conditions (i.e., experimentally manipulate independent variables) and that assess biomedical or behavioral outcomes in humans for the purpose of understanding the fundamental aspects of phenomena without specific application towards processes or products in mind. Applicants not planning an independent clinical trial or basic experimental study with humans, or proposing to gain research experience in a clinical trial or basic experimental study with humans led by another investigator, must apply to the 'Independent Clinical Trial Not Allowed' companion NOFO. The proposed project must be related to the programmatic interests of one or more of the participating NIH Institutes and Centers (ICs) based on their scientific missions.</p>

Synopsis The NIH Exploratory/Developmental Grant supports exploratory and developmental research projects by providing support for the early and conceptual stages of these projects. These studies may involve considerable risk but may lead to a breakthrough in a particular area, or to the development of novel techniques, agents, methodologies, models, or applications that could have a major impact on a field of biomedical, behavioral, or clinical research. This Notice of Funding Opportunity does not accept applications proposing clinical trial(s).

Synopsis The purpose of the NIH Independent Scientist Award (K02) is to foster the development of outstanding scientists and enable them to expand their potential to make significant contributions to their field of research. The K02 award provides three to five years of salary support and "protected time" for newly independent scientists who can demonstrate the need for a period of intensive research focus as a means of enhancing their research careers. Each independent scientist career award program must be tailored to meet the individual needs of the candidate. This Parent Announcement is for basic science experimental studies involving humans, referred to in NOT-OD-18-212 as "prospective basic science studies involving human participants." These studies fall within the NIH definition of a clinical trial and also meet the definition of basic research. Applicants not planning an independent clinical trial, or proposing to gain research experience in a clinical trial led by another investigator, must apply to companion NOFO (PA-24-188).</p> <p>The primary purpose of the NIH Mentored Clinical Scientist Research Career Development Awards (K08) program is to prepare qualified individuals for careers that have a significant impact on the health-related research needs of the Nation. This program represents the continuation of a long-standing NIH program that provides support and "protected time" to individuals with a clinical doctoral degree for an intensive, supervised research career development experience in the fields of biomedical and behavioral research, including translational research. This Parent Announcement is for basic science experimental studies involving humans, referred to in NOT-OD-18-212 as “prospective basic science studies involving human participants.” These studies fall within the NIH definition of a clinical trial and also meet the definition of basic research. Types of studies that should be submitted under this NOFO include studies that prospectively assign human participants to conditions (i.e., experimentally manipulate independent variables) and that assess biomedical or behavioral outcomes in humans for the purpose of understanding the fundamental aspects of phenomena without specific application towards processes or products in mind. Applicants not planning an independent clinical trial or basic experimental study with humans, or proposing to gain research experience in a clinical trial or basic experimental study with humans led by another investigator, must apply to the 'Independent Clinical Trial Not Allowed' companion NOFO. The proposed project must be related to the programmatic interests of one or more of the participating NIH Institutes and Centers (ICs) based on their scientific missions. This Notice of Funding Opportunity (NOFO) is designed specifically for applicants proposing to serve as the lead investigator of an independent clinical trial, a clinical trial feasibility study, or a separate ancillary study to an existing trial, as part of their research and career development. Applicants not planning an independent clinical trial, or proposing to gain research experience in a clinical trial led by another investigator, must apply to companion NOFO (PA-24-182).</p>

Synopsis The purpose of the NIH Independent Scientist Award (K02) is to foster the development of outstanding scientists and enable them to expand their potential to make significant contributions to their field of research. The K02 award provides three to five years of salary support and "protected time" for newly independent scientists who can demonstrate the need for a period of intensive research focus as a means of enhancing their research careers. Each independent scientist career award program must be tailored to meet the individual needs of the candidate. This Parent Announcement is for basic science experimental studies involving humans, referred to in NOT-OD-18-212 as "prospective basic science studies involving human participants." These studies fall within the NIH definition of a clinical trial and also meet the definition of basic research. Types of studies that should be submitted under this NOFO include studies that prospectively assign human participants to conditions (i.e., experimentally manipulate independent variables) and that assess biomedical or behavioral outcomes in humans for the purpose of understanding the fundamental aspects of phenomena without specific application towards processes or products in mind. Applicants not planning an independent clinical trial or basic experimental study with humans, or proposing to gain research experience in a clinical trial or basic experimental study with humans led by another investigator, must apply to the 'Independent Clinical Trial Not Allowed' companion NOFO. The proposed project must be related to the programmatic interests of one or more of the participating NIH Institutes and Centers (ICs) based on their scientific missions. This Notice of Funding Opportunity (NOFO) is designed specifically for applicants proposing to serve as the lead investigator of an independent clinical trial, a clinical trial feasibility study, or a separate ancillary study to an existing trial, as part of their research and career development. Applicants not planning an independent clinical trial, or proposing to gain research experience in a clinical trial led by another investigator, must apply to companion NOFO (PA-24-179).

improving the diagnosis and control of diseases that could confound or interfere with animal use in biomedical research. The proposed project must have broad applicability to multiple NIH Institutes or Centers (ICs) to align with the NIH-wide mission of the Office of Research Infrastructure Programs (ORIP). The proposed studies must include animal models and explore multiple body systems or multiple categories of diseases. Applications that develop models focused on a specific disease or area of research, or only propose studies primarily relevant to a single NIH IC, will be considered not acceptable to this NOFO and will be withdrawn.

## NSF Funding Opportunities

EGFP aims to enhance the capacity and competitiveness of EPSCoR jurisdictions by providing funding to graduate degree-awarding institutions to support NSF EPSCoR Graduate Fellows as they pursue graduate degrees in the disciplines specified by the NSF Directorates and Office that are participating in the EGFP funding program. Fellows may pursue degrees in field that differ from the field or sub-field of study that the GRFP Honorable Mention recipients previously listed in their GRFP application. EGFP awards will be made to institutions in EPSCoR jurisdictions. Awards will provide three years of stipend and associated cost-of-education allowance for each NSF EPSCoR Graduate Fellow. Stipends must be budgeted at the level of \$37,000 per year per Fellow and cost-of-education allowances must be budgeted at the level of \$16,000 per year per Fellow. A total of three years of support must be budgeted per Fellow. Each Fellow must be given up to five years to utilize the support. Awardees will administer the awards such that the Fellows receive the full stipend amount and the institution retains the full cost-of-education allowance during the three years that each Fellow receives support. All submissions must request support for a minimum of three Fellows.</p>

Synopsis	<p>TechAccess: AI-Ready America is a national-scale initiative to accelerate Artificial Intelligence (AI) readiness and adoption across the U.S. by strengthening coordination, leveraging partnerships and resources, filling gaps, and scaling what works - so local and state priorities can lead in shaping an AI-driven economy that benefits all Americans. Unlike initiatives centered around K - 16 education, AI-Ready America additionally reaches businesses, public-serving organizations, and individuals, among others, expanding access to AI knowledge, tools, and resources. The program also emphasizes practical implementation through hands-on assistance and workforce up-skilling, including experiential learning such as internships, project-based work, and apprenticeships, to ensure stakeholders can effectively apply and innovate with AI. The program supports: State/Territory Coordination Hubs (Coordination Hubs) - one in every state, the District of Columbia (DC), or territory in the United States - connecting partners, strengthening planning and deployment, and rapidly scaling approaches; A National Coordination Lead (National Lead) - facilitating collaboration and knowledge sharing among Coordination Hubs, coordinating priority economic sectors, and informing national AI strategies; and AI-Ready Catalyst Award Competitions - a series of topic-driven competitions issued over the course of the program to pilot and scale innovative approaches that address critical national AI readiness needs. This funding opportunity focuses on Coordination Hubs. The National Lead will be funded as an Other Transaction (OT) offered through an Other Transaction Agreement Solutions Offering. AI-Ready Catalyst Award Competitions will be announced through an NSF-approved mechanism, with proposals submitted according to the instructions provided at the time of announcement.</p>

Program URL	<a href="#">Link to program URL</a>
Deadline Dates (ALL)	08-Jun-2026
Synopsis	<p>Effort Description: TIGAR Exploratory Topic will forge entirely new paths to stabilizing regenerative tissues and organs by seeding the development of enabling technologies that can unlock temperature-flexible storage in increasingly larger and more complex biological systems. Solutions may involve any combination of new materials, artificial intelligence/machine learning, high-throughput screening methods, biological interventions, devices, processing methods, analytical technology, and packaging approaches that can overcome current roadblocks and yield a leap in the ability to store and distribute complex biologics, without introducing high cost or complexity. Strategies that reduce reliance on strictly controlled temperature zones and can ensure safe storage in a range of environmental conditions are preferred. While long-term temperature-flexible storage is ideal, any advance that removes logistical hurdles or establishes shelf-life stability at easy to maintain temperatures (preferably non-cryogenic) will be considered. Innovations at the cellular level without a strategy for deployment in thick tissues will not be considered. Please ensure to follow this opportunity for any updates. For more information on the TIGAR Exploratory Topic visit: <a href="https://arpa-h.gov/explore-funding/initiatives-and-sprints/tigar">https://arpa-h.gov/explore-funding/initiatives-and-sprints/tigar</a> For information on Proposer's Day details and registration information, please see Special Notice ARPA-H-SN-26-142</p>

 Deadline Dates (ALL) | 25-Jun-2026

Synopsis | The Defense Advanced Research Projects Agency (DARPA) is soliciting innovative approaches to address challenges in developing continuously updating digital twin models of the cardiovascular system that combine patient data with biological physics to simulate in real time possible interventions and to predict their outcomes before actual intervention on a patient. The VITAL program will establish a foundation for causal, prediction-driven decision support in medicine, enabling clinicians and future autonomous systems to evaluate treatment options before they are applied. By defining when mechanistic digital twins, reduced-order models, and data-driven inference are reliable and actionable, VITAL will shift medical care from reactive assessment to anticipatory intervention. This capability has the potential to improve outcomes across acute, chronic, and emergent clinical settings.

The sponsor is particularly interested in approaches to orchestrate the execution of distributed workflows that adhere to maintaining flexibility, while adapting to a dynamic operational environment. The Air Force plans to complicate the adversary's targeting problem through the distribution of forces to increase survivability and maintain functionality. Successful distributed C2 operations will rely on distributed control and decentralized execution, with an assumption that specific conditional authorities will be delegated to lower tier nodes. As the Air Force transitions from monolithic C2 nodes to many distributed nodes, it will require a capability to execute distributed C2 workflows across multiple locations while maintaining awareness of changing states to functions, resources, and mission objectives. The Coordinating Austere Nodes through Virtualization and Analysis of Streams (CANVAS) program proposes to meet these demand signals by designing and developing a system prototype that assumes contested and degraded environments will be normal for executing distributed operations.</p>

---------	---------------	--------------	----------------	---------------	----------------

Synopsis	Brain Canada, in partnership with Women's Brain Health Initiative (WBHI) and with support from the Government of Canada, is launching the Accelerator Grants: Migraine Research program, an initiative explicitly designed to catalyze research in migraine, a highly prevalent neurological condition that disproportionately affects women. The Accelerator Grants: Migraine Research program aims to support bold, innovative research that has the potential to drive new insights and improve prevention, diagnosis, and treatment strategies for migraine. It is anticipated that this funding will catalyze new insights and support the generation of preliminary data, tools, or interventions that can inform and enable new directions in the field. Projects must consider the influence of sex- and gender-related factors in the design, analysis, and evaluation of the research given the disproportionate impact of migraine on women.

Synopsis | The California Institute for Regenerative Medicine (CIRM) offers a DISC4 program to support comprehensive, discovery research across a diverse range of diseases and bottlenecks that will accelerate the development of potential therapeutics and biomarkers in regenerative medicine. This vision is achieved through unique funding opportunities supporting research at different scales and levels of maturity, with an emphasis on multidisciplinary innovation, knowledge sharing and leveraging synergies across CIRM-funded programs, to catalyze the discovery of targets and biomarkers and support their entry into preclinical development. The maximum amount of funding that may be requested for a DISC4 Award is \$13,000,000 per award, inclusive of direct and indirect project costs. The maximum award duration is four (4) years. Maximum total project costs may be increased up to an additional \$1,000,000 per award (maximum \$14,000,000 per award) if an equivalent (or larger) amount of eligible matching fund contributions is provided. The proposed

	Synopsis	<p>This funding opportunity will foster collaboration between researchers from different research fields, at different stages of their career, and promote research on different phases of the care continuum. It will also harness new technologies leading to more impactful research within ICRH's mandate area. This will be achieved through a coordinated approach utilizing diverse funding pools, each tailored to the collaboration-readiness of participating teams. Ultimately, the funding opportunity is intended to prepare the research community to become more competitive for cross-pillar, interdisciplinary networks, a critical aspect through which the Reimagine Acute Care initiative, will fund and foster projects within ICRH's mandate. Strengthening interdisciplinary collaborations will enable Canadian researchers and the healthcare sector to improve evidence-based decision-making along the care continuum and lay the foundation to reduce the burden of disease, improve treatment outcomes and accelerate recovery.</p>

	<p>Program URL <a href="#">Link to program URL</a></p> <p>Deadline Dates (ALL) 16-Jun-2026</p> <p>Synopsis</p>				
	<p>In addition to a general pool that supports research across all four pillars of health research, is relevant to IHDCYH's mandate, and addresses at least two of the six youth-identified priorities of Canada's Youth Policy (Leadership and Impact; Health and Wellness; Innovation, Skills and Learning; Employment; Truth and Reconciliation; Environment and Climate Action), this funding opportunity will support projects relevant to the following research areas: Indigenous (First Nations, Inuit or Métis) Youth Health: this pool will support research focused on distinctions-based Indigenous youth health and is relevant to IHDCYH's mandate. To be eligible for this pool, applications must align with CIHR's definition of Indigenous health research. Two-Spirit (2S), Trans, Non-binary and/or other Gender Diverse Youth Health: this pool will support research focused on promoting health equity of Two-Spirit (2S), Trans, Non-Binary and/or Gender Diverse youth, consistent with IGH's mandate. This may include but is not limited to research on gender-affirming care, the impacts of policy on health (in)equity and examining the determinants of health (in)equity for 2S, Trans, Non-Binary and/or Gender Diverse youth. Applications are not required to focus on all listed communities; any research involving or focused on Indigenous youth must align with CIHR's definition of Indigenous health research. Reducing Social Inequalities in Health among Canada's Youth: this pool will support research focused on promoting health equity by reducing social inequities in health among Canada's youth populations. This may include the incorporation of intersectionality or other social justice models (e.g., addressing structural determinants of health, anti-colonialism, and/or anti-racism, etc.), and that is relevant to IPPH's mandate.</p>

countries who are seeking to explore the competition theme through their research proposals in an original, innovative and policy-relevant way. The theme for the 2025 Edition is Digital Transformation for Universal Health Coverage. Digital health is a cultural transformation of traditional healthcare. Digital technologies offer powerful tools to improve access, affordability, and quality of health services. Low- and middle-income countries (LMICs) are often at the forefront of innovation in this space, offering valuable lessons to the global public health community on how to do more with less, impacting health outcomes, behavior and knowledge among the most marginalized communities. The right combination of research and research-led implementation can help scale innovations to benefit larger groups, or it can enable impactful innovations to travel and be adapted across different health systems. The award invites social science researchers based in LMICs to put forward proposals that focus on building the empirical evidence and the actionable knowledge capable of transforming the pursuit of universal health coverage through digital solutions. Research should illuminate how digital solutions impact the pursuit of universal health access across low- and middle-income countries.

	Deadline Dates (ALL)	26-Jun-2026			
	Synopsis	The International Center for Responsible Gaming (ICRG) invites investigators to apply for a two-year research grant focused on lottery gambling and responsible gambling practices. This initiative is intended to support practical, policy-relevant, and implementation-focused research that can inform lottery operations, player protection strategies, and public health approaches to gambling-related harm. Lottery gambling remains one of the most widely participated and socially accepted forms of gambling. Despite its reach, there are persistent gaps in the evidence base regarding how responsible gambling principles are best designed, implemented, and evaluated within lottery contexts. This RFA seeks to address those gaps by funding research that produces actionable insights, not solely theoretical contributions.

Lung Cancer with a focus on furthering the understanding of the development, prevention, and therapy of resistance by supporting projects that seek to identify, characterize, treat or prevent resistance to lung cancer therapies. Work supported through this mechanism will address important mechanistic questions and developmental therapeutics across histological subtypes of lung cancer (including lung adenocarcinoma, squamous cell carcinoma and small cell lung cancer) and across the care continuum including newly designed targeted therapies and immunotherapies. These studies will enhance the momentum of improving lung cancer outcomes and have the potential to increase survivorship.

Deadline Dates (ALL)	01-Jun-2026
Synopsis	<p>Pfizer is issuing this Request for Proposals (RFP) to support educational initiatives designed to enhance healthcare professionals' knowledge and skills in the management of ulcerative colitis (UC). By integrating three key themes - transitioning from conventional to advanced therapies, educating on the role of biomarkers in long-term management of patients on S1P therapies and addressing rural and metropolitan disparities in UC care - this program aims to equip clinicians with evidence-based tools and approaches. Ultimately, these efforts seek to address current educational gaps, promote best practices in UC management, and improve patient outcomes across diverse settings. Individual projects requesting up to \$150,000 AUD will be considered.</p>

and the creation of high-impact research platforms that can speed discovery. Our AI at Work program aims to spur exceptional research exploring how adoption of AI may affect the nature of work and the operation of the labor market. The sponsor will support work that offers compelling empirical insights into these questions. Currently, there are too few high-quality field experiments and quasi-experiments that examine the real-world effects of introducing AI tools in the workplace. Stakeholders, such as AI tool developers, government agencies and businesses, need reliable information on how AI systems perform in practice and what their implementation means for employees and the labor market. The AI at Work program is designed to address this need by funding research that provides clear and trustworthy estimates of the effect of the deployment of AI tools in the workplace.
