Research Awards & Funding Opportunities

Dear Research Community,

Below are COVID-19 funding opportunities from the funding opportunity database SPIN and other sources. Please note that some opportunities have rapidly approaching deadlines.

Previous COVID-19 funding opportunities that have been circulated via the listserve are posted on [GCO's Funding Opportunities](#) page and on the [ORS Research Roadmap COVID-19 Funding Opportunities](#) page organized by due date.

In addition, please review the [SPIN Getting Started Instructions](#) for information about beginning your individual search.

Deadline Dates (ALL)	30-Apr-2020				

PROGRAM BACKGROUND:

This program is specifically focused on preparation for COVID-19 related critical care capability shortages. Although the United States has more critical care beds per capita than other developed nations, emerging national and international experience with COVID-19-related critical illness suggests a high level of oncoming system stress on critical care resources and a likely potential for intensive care unit (ICU) beds and care teams to be overwhelmed.

Tele-critical care can be a powerful force-multiplier in the extension of limited critical care resources in both high-census urban centers and rural communities in which access to critical care – facilities, equipment and trained clinicians - is limited even under normal conditions. Many local and regional health systems have invested extensively in telemedicine capabilities, but many of these systems lack sufficient scalability, are limited both in interoperability with other telehealth systems and scope and reach of partner provider-networks and supported tele-clinical services.

The vision for this program is to extend local tele-critical care capability sets to a broader, flexible network - first locally, then step-wise regionally and nationally - that can be leveraged wherever there is need.

SOLUTION REQUIREMENTS:

This upcoming RPP will focus on enhanced development of integrated technologies and clinical workflows to establish and rapidly scale virtual wards. The program will support the extension of high-quality intensive care to traditional (e.g. critical access hospitals and clinics) and non-traditional and temporary healthcare facilities (e.g. field hospitals and gymnasiums) which lack adequate critical care expertise and resources necessary for care of COVID-19-related illnesses. Enhanced white papers should specifically address providing EXISTING technologies available for other use cases that can be rapidly adapted to establishing a National Emergency Tele Critical Care Network (NETCCN). Existing technologies which should be included are as follows:

Mobile communications capabilities including synchronous audio/video, asynchronous messaging, and access to continuous monitoring
Clinician-facing web portal and/or mobile-based application (goal is availability on every device)
Capability for basic documentation in real-time as well as data collection and reporting
Cloud-based information storage including ability for later offloading via PDF or HL7
Specific requirements for the creation of these "virtual wards" (i.e., cohorts of patients that are managed together and with continuity by the tele critical care [TCC] teams) include the following:

Self-contained health information management system (or system of systems) using elastic cloud computing at a minimum, IoT connections, and anticipated incorporation of future AI to enable:
Patient flow management

Synopsis

Patient level information management
 Continuity of care through shift change, provider turnover, and patient transfer using lightweight patient hand-off tools.
 Integrated audio-visual communications capability
 Information sharing and reporting capabilities:
 A governance structure or "network of networks" must be implemented to coordinate this response
 Reporting and data visualization tools of both patient and system level data are crucial for information sharing, dissemination of consensus best-practice recommendations, measures of system stress, and rapid reallocation of resources.
 Survey capabilities – of patients/caregivers, local clinicians, and remote TCC experts should – should be included.
 Patient-level data should be aggregated and stored for later analysis, can eventually be batch loaded into existing EMRs when resources allow
 System should allow for alerts, bulletins, and other timely communications to be pushed out to users
 Integrated information sharing
 Coverage/staffing/care team model(s) for virtual wards to include tiered staffing concepts with local proceduralists (as available) supported by the technology solution developed in this proposal and serviced by tele critical care clinicians.
 The system will need to include a method to verify credentials of tele critical care clinicians/teams who participate as service providers.

067721	Clinic Testing Therapeutic/Indication Pairing Strategies (U01 Clinical Trial Required)	National Center for Advancing Translational Sciences/NIH/DHHS	PAR-18-332	05-Jun-2020	9,000,000.00 USD
Contact Name	Bobbie Ann Austin, Ph.D.				
Contact Telephone	301-435-0824				
Contact Email	Bobbie.Austin@nih.gov				
Program URL	https://grants.nih.gov/grants/guide/pa-files/PAR-18-332.html				
Deadline Dates (ALL)	05-Jun-2020, 05-Oct-2020				

Synopsis
 National Center for Advancing Translational Sciences ([NCATS](#)) invites applications for clinical studies to repurpose existing drugs or biologics (therapeutics) that have already completed at least a Phase I trial for a different indication by the time an award is made. The hypothesis for proposed studies must be developed using innovative processes to identify the therapeutic/indication pair. Examples include independent crowdsourcing strategies (e.g., <http://www.ncats.nih.gov/ntu/therapeutics/current>, <http://openinnovation.astazeneca.com/>, or any website that lists experimental drugs or biologics), or computational algorithms. Projects should be supported by scientific evidence that modulation of a therapeutic target will have a positive impact on the disease/condition. The U01 award may be used for Phase I and/or Phase II clinical trials for a new therapeutic use to establish substantial evidence of efficacy and to establish evidence of safety for the new use. This program will use the NIH U01 Research Project Cooperative Agreements award mechanism.

069930	Clinical Trial Planning: Therapeutic/Indication Pairing Strategies (U34 Clinical Trial Not Allowed)	National Center for Advancing Translational Sciences/NIH/DHHS	PAR-18-462	16-Jun-2020	225,000.00 USD
Contact Name	Bobbie Ann Austin, Ph.D.				
Contact Telephone	301-435-0824				
Contact Email	Bobbie.Austin@nih.gov				
Program URL	https://grants.nih.gov/grants/guide/pa-files/PAR-18-462.html				
Deadline Dates (ALL)	16-Jun-2020, 16-Oct-2020				

Synopsis
 National Center for Advancing Translational Sciences ([NCATS](#)) invites applications to support clinical trial planning. This includes collection of feasibility data and complete planning, design, and preparation of the documentation necessary for implementation of Phase I and/or Phase II clinical trials for a new therapeutic use. The clinical trial that is being planned must aim to repurpose existing drugs or biologics (therapeutics) that have already completed at least a Phase I trial for a different indication by the time a clinical trial planning award is made. The hypothesis for proposed studies must be developed using innovative processes to identify the therapeutic/indication pair. Examples include independent crowdsourcing strategies (e.g., <http://www.ncats.nih.gov/ntu/therapeutics/current>, <http://openinnovation.astazeneca.com/>, or any website that lists experimental drugs or biologics), or computational algorithms. This program will use the NIH U34 Planning Cooperative Agreement grant mechanism.

065911	Bench Testing Therapeutic/Indication Pairing Strategies (UG3/UH3)	National Center for Advancing Translational Sciences/NIH/DHHS	PAR-17-465	26-Jun-2020	700,000.00 USD
Contact Name	Bobbie Ann Austin, Ph.D.				
Contact Telephone	301-435-0824				
Contact Email	Bobbie.Austin@nih.gov				
Program URL	https://grants.nih.gov/grants/guide/pa-files/PAR-17-465.html				
Deadline Dates (ALL)	26-Jun-2020				

Synopsis
 National Center for Advancing Translational Sciences ([NCATS](#)) invites applications for support of pre-clinical studies to repurpose existing experimental or FDA approved drugs or biologics (existing therapeutics) that have already begun or completed at least a Phase I trial. The hypothesis for proposed studies must be developed using innovative processes to identify the therapeutic/indication pair. Examples include independent crowdsourcing strategies (e.g., <http://www.ncats.nih.gov/ntu/assets/current>, <http://openinnovation.astazeneca.com/>, or any website that lists experimental therapies), or use of computational algorithms. The initial UG3 award will support the development of milestone-driven rigorous, pre-clinical target engagement and/or efficacy studies. Once UG3 pre-clinical milestones have been met, the UH3 award may be made to support clinical trial planning; this includes complete planning, design, and preparation of the documentation necessary for implementation of Phase I and/or Phase II clinical trials for a new therapeutic use. This FOA will use the NIH [UG3/UH3](#) Exploratory/Developmental Phased Award Cooperative Agreement award mechanism.

Program URL		https://www.medicalcountermeasures.gov/Request-BARDA-TechWatch-Meeting/		
Synopsis	The U.S. government, in response to the COVID-19 outbreak, seeks information from stakeholders on available medical countermeasures in development. We are particularly interested in products and technologies that have progressed into or beyond non-clinical trials, have established large-scale cGMP manufacturing capability, or utilize an approved platform. Information regarding diagnostics, therapeutics, vaccines, and other products or technologies relevant to addressing this outbreak are sought.

Synopsis	The NIH Small Research Grant Program supports small research projects that can be carried out in a short period of time with limited resources. This program supports different types of projects including pilot and feasibility studies; secondary analysis of existing data; small,				

self-contained research projects; development of research methodology; and development of new research technology. This Funding Opportunity Announcement does not accept applications proposing clinical trial(s).

<u>RFI -- AMENDMENT -- Collection of Serum Samples from Patients Infected With SARS-CoV-2</u>	Department of Health & Human Services	2020-0001-COV19- 06-Apr-2020 Not Available EDS
---	---------------------------------------	--

Contact Name	Eric Sullivan, Contracting Officer
Contact Telephone	412-386-5290
Contact Email	LRV4@cdc.gov
Program URL	https://beta.sam.gov/opp/7042029f6159423a81c4528112293675/view
Deadline Dates (ALL)	06-Apr-2020

Title: Request for Information – Collection of Serum Samples from Patients Infected With SARS-CoV-2 Synopsis: This is a request for information. It is not a solicitation for proposals, proposal abstracts, or quotations. The purpose of this notice is to: Determine the level of interest which exists in the open market for providing the needed services; Obtain information, needs, capabilities, constraints, capacities, and requirements of those potential providers of the needed service; and Make use of this information to inform potential acquisition strategies that may be used to support a) emergency public health response activities, b) on-going assay development, and c) research. Background: The Centers for Disease Control and Prevention (CDC) is a public health organization that operates within the Department of Health and Human Services. The CDC requires access to freshly drawn whole blood, blood products, and other unique sample types and materials to enable rapid assay development during infectious disease outbreaks. In addition to CDC, many commercial manufacturers and research laboratories are developing serological tests for diagnostic purposes in response to the COVID-19 pandemic. Fundamental to the development and implementation of serologic procedures, and the evaluation of these procedures, is the availability of positive control samples (i.e., serum or plasma from patients with well-documented, laboratory-confirmed disease). The only source of positive control samples for assays for human samples originates from individuals who have had recent COVID-19 illnesses. Traditionally, positive controls for serologic test procedures are identified from patient samples submitted to the CDC laboratory for routine diagnostic testing. However, these samples are typically small volume (1 ml or less) and cannot serve as standardized controls. Similarly, uniform panels of positive control serum are generally unavailable, limiting the ability of CDC and other laboratories to standardize and calibrate their assays. Requirement: CDC is seeking information from companies and other organizations about their capability and capacity to deploy to the site of a domestic SARS-CoV-2 outbreak, obtain informed consent, collect whole blood specimens (~20 ml) from individuals infected with SARS-CoV-2 who are at least 14-28 days after the onset of symptoms, and safely ship these specimens to CDC in accordance with all applicable local, state,

and federal and/or international laws, and regulations. Additionally, the agency is seeking information on the following: To obtain information, needs, capabilities, constraints, capacities, and requirements of those vendors and companies who do have an interest (or potential interest) in providing the needed services; Information provided should include: Name, location and size of company Service and/or coverage area (e.g. throughout the United States and/or internationally). Description of sites used to collect patient samples. Availability of IRB and ability to develop IRB approved protocols and consent documents. Ability to explain the reason for the sample collection and the informed consent document to prospective patients, obtain consent, and transfer the consent documents to CDC. Ability to obtain required patient meta data (age, gender, results of clinical testing, etc), complete the required sample data forms, and securely transmit the information to CDC. Ability to safely collect whole blood and prepare serum prior to shipment to CDC. Description of safety measures used for blood collection. Ability to perform testing to determine the titer of antibodies against SARS-CoV-2 Current ability to collect, and details of prior experience collecting, specimens from patients in a medical setting (e.g., hospital, clinic, physician office) and/or in patient's homes or other locations. Information about time it would take to deploy personnel to the site of the outbreak and begin collecting samples. Methods of sample transport and shipping which may be utilized, and measures to assure shipping conditions, such as temperature, to preserve sample integrity. Ability to track items in transit and provide exact locations of samples at all times Ability to adhere to all applicable hazardous materials transportation regulations Any liability issues, constraints and/or concerns to be considered Submission Instructions: Respondents are asked to provide only the most pertinent information, data, and materials necessary to adequately convey a declaration of capability in line with this notice. Respondents are asked to provide a cover page that contains the following information: All Point of Contact information (email addresses, phone numbers, and mailing address) DUNS number All relevant NAICS Codes Identification as a large or small business. If small, indicate the classification. Identification of services on any Federal Supply Schedules, if any, and the relevant schedule numbers. Proprietary information, if any, should be minimized and MUST BE CLEARLY MARKED. To aid HHS, please segregate and clearly mark proprietary information. Please be advised that all submissions become the property of the Government and will not be returned. This REQUEST FOR INFORMATION is in accordance with FAR 52.215-3 Request for Information or Solicitation for Planning Purposes (Oct 1997), as such, any information received will be for the purpose of planning only. Responses to this REQUEST FOR INFORMATION notice, along with a firm's capability statement referencing "Request for Information – Serum from COVID-19 Patients" may be submitted electronically via email to the points of contact listed below NO

LATER THAN 5PM EST on 6 April 2020. Point of Contact: Eric Sullivan, Contracting Officer LRV4@CDC.GOV (412) 386-5290. Additional beta.sam.gov information Notice Id eca61738662846dd90b6a3bd095fa9d3 Source <https://beta.sam.gov/opp/eca61738662846dd90b6a3bd095fa9d3/view.>

	From 1665 to 1666, the Great Plague of London swept across England, likely taking the lives of over 100,000 people (United Kingdom Public Archives, 2020). Though the germ theory of disease would not be formulated until the 1860s, the English public engaged in “social distancing” behaviors to avoid illness (Washington Post, 2020),				

Synopsis

leading to the closure of universities. Among the displaced was a young Isaac Newton, still a student at Trinity College in Cambridge. During the ensuing year of isolated study and reflection, Newton developed the basis for calculus, as well as foundational theories in gravitation, motion, and optics.

Separated from the Great Plague by 350 years, the COVID-19 pandemic has led to similar health responses among the general public and scientific community, forcing the closure of laboratories and universities throughout the world and slowing scientific progress across theoretical and empirical domains. To help stimulate scientific thought and encourage efforts and advancements in the spirit of Sir Isaac, the Basic Research Office in the U.S. Department of Defense (DoD) announces the Newton Award for Transformative Ideas during the COVID-19 Pandemic.

Program URL	https://www.fct.pt/apoios/projetos/concursos/datascienc/index.phtml.en				
Deadline Dates (ALL)	04-May-2020 [LOI/Pre-App]				
Synopsis	DLA seeks novel solutions to combat COVID-19. Specifically, the DoD suffers from an increasing demand for Personal Protective Equipment ("PPE") for individuals who perform critical national security functions. Of particular concern are N95 masks, which are primarily produced overseas. Overseas production is compounded by a lag in domestic production. Domestic production is limited because of the unavailability of mask conversion machines, long timelines to manufacture and assemble new production lines and limited supplies of refined materials. Moreover, various state governments are competing to buy the limited N95s currently available, reducing supply and increasing cost. DLA seeks prototype solutions that can help combat this shortage in the near and medium term.

RFP -- AMENDMENT -- Special Notice for Innovative Commercial Products In Support of CORONAVIRUS (COVID-19) Response	092378	Department of Homeland Security	CSOP-HQ-CV-20-00001	31-Aug-2020	Not Available
---	--------	---------------------------------	---------------------	-------------	---------------

Contact Email COVID19CSOP@HQ.DHS.GOV

Program URL <https://beta.sam.gov/opp/4f00c495f2eb489b8297295bb651bbe/view>

Deadline Dates (ALL) 31-Aug-2020

Special Notice for Innovative Commercial Products In Support of CORONAVIRUS (COVID-19) Response The Department of Homeland Security (DHS), Office of Procurement Operations (OPO) in support of Office of the Chief Procurement Officer will use the Commercial Solutions Opening Pilot Program (CSOP) procedures to acquire innovative, commercial items, technologies and services currently in the production/commercialization phase as well as

Synopsis

adaptations of existing commercial products. The DHS Commercial Solutions Opening Pilot Program (CSOP) is a non- Federal Acquisition Regulation (FAR) based solicitation authority for acquiring innovative and commercial solutions. Section 880 of the National Defense Authorization Act (NDAA) for Fiscal Year 2017 (Pub. L. 114-328) authorized DHS to implement a pilot program to competitively procure innovative commercial items, technologies, and services using commercial solution opening procedures. CSOP is a new acquisition mechanism that provides a streamlined acquisition process and simplified contract terms that is designed to maximize efficiency and economy and minimize burdens and administrative costs for both the Government and industry. The Department of Homeland Security (DHS) efforts in preparedness and readiness have facilitated a speedy, whole-of-government response in confronting COVID-19, keeping Americans safe, and helping detect and slow the spread of the virus. DHS is seeking innovative commercial products that are in support of the COVID-19 response or similar microbial threats. Considering the magnitude and potential threat that COVID-19 and similar microbial threats pose to our nation's health, safety and security, the Government seeks to rapidly accelerate the testing and fielding of new capabilities, employing innovative commercial products to the detection of exposure, prevention, containment and treatment of COVID-19 and similar microbial threats. Such innovative commercial products would be in support of the mission of the DHS, including the assistance that the FEMA is providing, in coordination with the HHS, to state, local, tribal, territorial governments and other eligible entities under the Stafford Act. Proposed innovative commercial products may be, but are not limited to, products that: 1) supplement shortages and/or emerging needs for personal protective equipment, 2) enhance or expedite screening capabilities, 3) enhance or expedite facility cleaning capabilities, 3) extend testing capabilities, 4) utilize technology to support the COVID-19 response, or 5) convert existing production and logistics operations to support the COVID-19 response. An important aspect of this objective is to support the efficient acquisition and testing of innovative commercial products from legitimate suppliers, as well as the efficient production and fielding of the successfully tested innovative commercial products. This notice will be updated with the General Solicitation describing the solicitation process and evaluation approach. The solicitation will be open and proposals accepted on an ongoing basis. The Government intends to make awards in Fiscal Year 2020. Potential submitters are hereby advised of the following: 1. The solicitation for innovative commercial products in support of COVID-19 is not a guarantee that award and obligation of funds will be made. 2. The costs incurred by companies in the preparation and submission of their response to solicitations will not be paid by the government. 3. All potential recipients of CSOP awards must be registered in the System for Award Management (SAM) before the recipient is awarded the CSOP contract. (<https://www.sam.gov/SAM/>) The General Solicitation describing the solicitation process and evaluation approach will be

posted on or about Tuesday, April 14, 2020. All questions and comments regarding this special notice shall be submitted to email address COVID19CSOP@HQ.DHS.GOV.

Synopsis	During this challenging time, Pfizer is committed to doing all they can to respond to the COVID-19 pandemic. They recognize the need for the rapid development of educational programs and trainings and the implementation of systemic best practices for COVID19 management. As part of their commitment, they are releasing this Request for Proposals (RFP) to provide financial support for organizations producing independent educational programs and quality improvement initiatives designed to combat this evolving crisis.

Synopsis	The National Institutes of Health (NIH) hereby notify the applicant community that funds may be available for applications based on a presidentially declared disaster under the Stafford Act, a public health emergency declared by the Secretary, HHS, or other local, regional or national disaster. Applications in response to Emergency Notices of Special Interest (NOSIs) will be routed directly to the NIH awarding component signed on to the Emergency NOSI.

Only applications submitted in response to an Emergency NOSI published by an IC will be allowed to apply to this FOA.

071528 [Administrative Supplements to Existing NIH Grants and Cooperative Agreements \(Parent Admin Supp Clinical Trial Optional\)](#)

National Institutes of Health/DHHS PA-18-591 None posted Not Available

Contact Email	GrantsInfo@nih.gov
Program URL	https://grants.nih.gov/grants/guide/pa-files/PA-18-591.html
Synopsis	National Institutes of Health (NIH) hereby notify Program Directors/Principal Investigators (PD(s)/PI(s)) holding specific types of NIH research grants listed in the full Funding Opportunity Announcement (FOA) that funds may be available for administrative supplements to meet increased costs that are within the scope of the approved award, but were unforeseen when the new or renewal application or grant progress report for non-competing continuation support was submitted. Applications for administrative supplements are considered prior approval requests (as described in Section 8.12.11 of the NIH Grants Policy Statement) and will be routed directly to the Grants Management Officer of the parent award. Although requests for administrative supplements may be submitted through this FOA, there is no guarantee that funds are available from the awarding IC or for any specific grant. All applicants are encouraged to discuss potential requests with the awarding IC. Additionally, prior to submission, applicants must review the awarding IC's web site to ensure they meet the IC's requirements.
