Grants and Contracts Office

## **Funding Opportunities Continuous Submissions**

Last updated: 10/25/2025

This funding opportunity packet contains information on funding opportunities with open deadlines. It also contains information about the National Institutes of Health (NIH) parent announcements. The opportunities are organized in the following order:

1. National Institutes of Health (NIH)
2. National Science Foundation (NSF)
3. Other Federal
4. Non Federal

Use the bookmarks to navigate to each section.

## NIH Parent Announcements

# Parent Announcements (For Unsolicited or Investigator-Initiated Applications)

Parent announcements are broad funding opportunity announcements allowing applicants to submit investigator-initiated applications for specific [activity codes](#). They are open for up to 3 years and use [standard due dates](#).

Not all NIH Institutes and Centers participate on all parent announcements. Before submitting your application, make sure the NIH Institute or Center that might be interested in your research is listed as a participating organization in the announcement.

The following Parent Announcements are available (sorted by Activity Code):

[ [Research \(R\)](#) | [Research Training \(T\)](#) | [Career Development \(K\)](#) | [Fellowships \(F\)](#) | [Admin Supplements](#) | [Post-award Administrative Action](#) ]

|         | Synopsis<br><p>The Center for Inherited Disease Research (CIDR) carries out high-throughput genotyping and sequencing and supports statistical genetics services designed to 1) aid identification of genes or genetic modifications that contribute to human health and disease or 2) enhance the classification and characterization of well-phenotyped specimens by the addition of genotype or next-generation sequence data. The laboratory specializes in genomic services that cannot be efficiently carried out in individual investigator laboratories. CIDR provides the most up-to-date platforms, services, and statistical genetic support. This is an NIH-wide initiative that is administered by NHGRI. Information about current services offered can be accessed via: <a href="https://cidr.jhmi.edu">https://cidr.jhmi.edu</a>.</p> |   |                |                       |                |

|-----------------|--|--|---------------|-----------------------|-------------|
| <b>Synopsis</b> | <p>The Physician Scientist Development Program (PSDP) is a mentored, pre-tenure track junior faculty position. The program lasts for three to five years during which time the incumbent designs and implements an integrated, translational research program. The key elements of support for the program are that it is prospectively and stably funded, that defined mentorship is provided, and that the program takes advantage of the research environment of the intramural National Institutes of Health (NIH), the National Human Genome Research Institute (NHGRI) and the NIH Clinical Center.</p>  |  |               |                       |             |

|        | Deadline Dates (ALL)   | This program will help to support eligible postdoctoral scientists maintain high productivity in an NIAID-funded laboratory while engaging in primary caregiver responsibilities. NIAID recognizes that postdoctoral scientists with young children or ailing relatives are sometimes unable to focus completely on their research activities because of primary caregiver responsibilities. As a result, these circumstances may delay an individual's transition to an independent career or reduce their scientific productivity at critical periods. Principal investigators may request additional funds to hire a mid-to-senior level technician at a full-time or part-time level of effort to fill in for the postdoctoral scientist when he/she is required to be away from the lab to fulfill their caregiver responsibilities. Administrative supplements must support work within the scope of the original project. |               |                       |               |

| Synopsis             | <p>Data science is an important cross-cutting research approach in the NIDA Strategic Plan and increasing the capacity of experts in data science for biomedical research of addiction is critical. The purpose of this Notice is to highlight NIDA's high-priority interest in receiving applications that will support training and career development in Big Data and Computational Science (i.e., Data Science) within the overall field of addiction research. Grants supported under this Notice can be from individuals at formative career stages or from established investigators proposing training programs that will support early career scientists. Individuals from diverse backgrounds, including those from</p> |

## National Institutes of Health (NIH) Funding Opportunities

groups historically underrepresented in the STEM fields, who wish to pursue further studies or careers in Big Data and Computational Science as it relates to addiction research are highly encouraged to apply.

| Synopsis  | This Notice of Special Interest (NOSI) invites requests for administrative supplements to existing NIH grants and cooperative agreements that will translate findings between epidemiology and prevention intervention research related to substance use and addiction. Successful and rapid translation requires active partnership between epidemiology and prevention science, creating cross-disciplinary teams with diverse scientific perspectives. Oftentimes, this translation can take many years or never occur. Epidemiology projects may be designed with the intention of informing prevention, but without specific aims or collaborations in place to move forward with translation. Similarly, prevention intervention studies may generate new hypotheses about substance use development or etiology, but these hypotheses may remain untested without collaboration between the prevention team and epidemiological researchers. |   |               |                       |               |

| Deadline Dates (ALL)   |   |
| Synopsis   | <p>The term “Mobile Health Clinic (MHC)” refers to a community-based model of healthcare delivery in which health services are delivered from a motorized vehicle within communities. Sometimes referred to as “Mobile Health Units”, “Mobile Clinics”, or described as “Healthcare on Wheels,” the MHC is usually a bus, truck or van that transports medical personnel and contains the clinical resources (e.g., examination table, laboratory supplies for point of care testing, and medical equipment) that are necessary to provide health care (e.g. primary care, behavioral health, dental, vision, specialized care or other health services). The term “populations that experience health disparities” refers to the NIH-designated United States (US) health disparity populations which include Blacks/African Americans, Hispanics/Latinos, American Indians/Alaska Natives, Asian Americans, Native Hawaiians and other Pacific Islanders, Middle Eastern/North Africans, socioeconomically disadvantaged populations, underserved rural populations, sexual and gender minority groups, and people with disabilities (<a href="https://www.nimhd.nih.gov/about/overview/">https://www.nimhd.nih.gov/about/overview/</a>). The term “multi-level” refers to determinants at two or more socioecological levels of interest (e.g., individual, family, clinician, health care system, community) that are relevant for understanding and addressing minority health and health disparities. This concept is further described under the NIMHD Research Framework (<a href="https://www.nimhd.nih.gov/about/overview/research-framework/">https://www.nimhd.nih.gov/about/overview/research-framework/</a>).</p> |

| Synopsis   | <p>The NIH Postbac IRTA program (CRTA, Cancer Research Training Award, in the National Cancer Institute) provides recent college graduates who are planning to apply to graduate or professional (medical/dental/pharmacy) school an opportunity to spend one or two years performing full-time research at the NIH. Postbac IRTAs/CRTAs work side-by-side with some of the leading scientists in the world, in an environment devoted exclusively to biomedical research. The NIH consists of the 240-bed Mark O. Hatfield Clinical Research Center and more than 1200 laboratories/research projects located on the main campus in Bethesda, MD and the surrounding area as well as in Baltimore and Frederick, MD; Research Triangle Park, NC; Hamilton, MT; Framingham, MA; Phoenix, AZ; and Detroit, MI..</p> |

| Synopsis                                |  | The purpose of this Notice of Special Interest (NOSI) is to announce that the National Center for Complementary and Integrative Health (NCCIH), the National Cancer Institute (NCI), the National Institute of Aging (NIA), the National Institute of Allergy and Infectious Diseases (NIAID), the National Institute of Biomedical Imaging and Bioengineering (NIBIB), the Eunice Kennedy Shriver National Institute of Child Health and Human Development (NICHD), the National Institute of General Medical Sciences (NIGMS), and the National Human Genome Research Institute (NHGRI) are encouraging new applications to advance research activities relevant to synthetic biology. The annual Synthetic Biology Consortium Meeting is organized to facilitate the sharing of tools and resources for synthetic biology research. Participants use this group as a forum to collaborate and receive feedback on current topics and future directions in synthetic biology. The PD(s)/PI(s) and other appropriate project staff associated with awards through this NOSI are strongly encouraged to attend the annual NIH Synthetic Biology Consortium Meeting, either in-person or through a virtual conferencing service. Furthermore, at least one trainee is encouraged to attend the annual meeting. If necessary, requests will be considered to support in-person attendance for the PD(s)/PI(s) and the appropriate project staff to participate in this annual meeting. To inquire about travel support to the annual NIH Synthetic Biology Consortium meeting, please contact the appropriate scientific/research contact listed in NOT-EB-20-017. |           |                       |               |

| Synopsis             | <p>The National Institutes of Health (NIH) and the Centers for Disease Control and Prevention (CDC) hereby notify Small Business Concerns (SBCs) whose research is supported by Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) grants that funds are available for administrative supplements to enhance the diversity of the research and entrepreneurial workforce by recruiting, mentoring, and supporting students, postdoctoral scholars, and eligible investigators from diverse backgrounds, including those from groups that have been shown to be underrepresented in health-related research or in the SBIR and STTR programs. This supplement opportunity is also available to support PD(s)/PI(s) of research grants who are or become disabled and need additional support to accommodate their disability in order to continue to work on</p> |                                    |           |                       |               |

## National Institutes of Health (NIH) Funding Opportunities

the research project. The activities proposed in the supplement application must fall within the scope of the parent grant, and simultaneously advance the objectives of the parent grant and support the research training and professional development of the supplement candidate. This Notice of Funding Opportunity (NOFO) is designed specifically for applicants proposing research that does not involve leading an independent clinical trial, a clinical trial feasibility study, or an ancillary study to a clinical trial. Applicants to this NOFO are permitted to propose research experience in a clinical trial led by a mentor or co-mentor.

|         | EAGER is a type of proposal used to support exploratory work in its early stages on untested, but potentially transformative, research ideas or approaches. This work may be considered especially "high risk-high payoff" in the sense that it, for example, involves radically different approaches, applies new expertise, or engages novel disciplinary or interdisciplinary perspectives. These exploratory proposals also may be submitted directly to an NSF program, but the EAGER proposal type should not be used for projects that are appropriate for submission as "regular" (i.e., non-EAGER) NSF proposals. Requests may be for up to \$300K (including indirect costs) and up to two years in duration. The award size, however, will be consistent with the project scope and of a size comparable to grants in similar areas. |                             |                |                       |                |

| Deadline Dates (ALL) | <p>The Plant Biotic Interactions (PBI) program supports research on the processes that mediate beneficial and antagonistic interactions between plants and their viral, bacterial, oomycete, fungal, plant, and invertebrate symbionts, pathogens and pests. This joint NSF/NIFA program supports projects focused on current and emerging model and non-model systems, and agriculturally relevant plants. The program's scope extends from fundamental mechanisms to translational efforts, with the latter seeking to put into agricultural practice insights gained from basic research on the mechanisms that govern plant biotic interactions. Projects must be strongly justified in terms of fundamental biological processes and/or relevance to agriculture and may be purely fundamental or applied or include aspects of both perspectives. All types of symbiosis are appropriate, including commensalism, mutualism, parasitism, and host-pathogen interactions. Research may focus on the biology of the plant host, its pathogens, pests or symbionts, interactions among these, or on the function of plant-associated microbiomes. The program welcomes proposals on the dynamics of initiation, transmission, maintenance and outcome of these complex associations, including studies of metabolic interactions, immune recognition and signaling, host-symbiont regulation, reciprocal responses among interacting species and mechanisms associated with self/non-self recognition such as those in pollen-pistil interactions. Explanatory frameworks should include molecular, genomic, metabolic, cellular, network and organismal processes, with projects guided by hypothesis and/or discovery driven experimental approaches. Strictly ecological projects that do not address underlying mechanisms are not appropriate for this program. Quantitative modeling in concert with experimental work is encouraged. Overall, the program seeks to support research that will deepen our understanding of the fundamental processes that mediate interactions between plants and the organisms with which they intimately associate and advance the application of that knowledge to benefit agriculture.</p> |                             |            |                       |               |

| Deadline Dates (ALL) |  |
| Synopsis             | <p>The National Science Foundation (NSF) has publicly communicated its commitment to promoting safe, productive research and education environments for current and future scientists and engineers, including efforts to help reduce sexual harassment and other forms of harassment in STEM contexts. Recently, to learn about the challenges related to sexual harassment in STEM settings, NSF and other organizations funded the National Academies of Sciences, Engineering, and Medicine (NASEM) to conduct a study on the prevalence and impact of sexual harassment in science and engineering departments and programs. The results of the study are available in the report, <i>Sexual Harassment of Women: Climate, Culture and Consequences in Academic Science, Engineering, and Medicine</i>. As the most comprehensive examination to date of sexual harassment in academic science, engineering, and medicine, the report brings together behavioral and social research on types of sexual harassment and prevalence, data on legal and policy mechanisms, and new approaches for changing the climate and culture in higher education to prevent and effectively respond to sexual harassment. One of the NASEM report's recommendations is to "conduct necessary research" (pp. 186-187) on a number of topics related to sexual harassment. This Dear Colleague Letter (DCL) is intended to highlight for the research community that NSF, as a primary federal funder of basic science and engineering research in the United States, continues to welcome and support competitive, peer-reviewed research that advances fundamental knowledge about the nature and underlying dynamics of sexual and other forms of harassment, and mechanisms for evaluating harassment prevalence, prevention, and responses, in a range of STEM education, research, and workplace settings.</p> |

| Synopsis             | <p>The United States (U.S.), Northern Ireland (NI), and the Republic of Ireland (RoI) have come together to form a unique partnership as a way of increasing the level of collaborative R&amp;D among researchers across the three jurisdictions that will generate innovation and lead to improvements in society. The objective of U.S. - Ireland R&amp;D Partnership is to encourage trilateral, collaborative research projects that address significant research challenges, particularly in the areas of nanoscale science and engineering, sensors and sensor networks, telecommunications, energy and sustainability, and cybersecurity. These thematic areas have been identified as representing a unique opportunity for collaborative research and are internationally recognized as potentially pivotal fields in the 21st century.</p> |  |            |                       |               |

|        | <p>Synopsis</p> <p>Through this Dear Colleague Letter (DCL), NSF announces a Pilot for the Allocation of High-Throughput Computing (HTC) resources made available through the Partnership to Advance Throughput Computing (PATh) project supported by NSF2. HTC supports the automated execution of workloads that consist of large ensembles of self-contained inter-dependent tasks that may require large amounts of computing power over long periods of time to complete. Available resources include large-scale compute and GPU servers and nearline storage, as described in more detail on the PATh credit accounts web page. Investigators may contact credit-accounts@path-cc.io with questions about PATh resources, using HTC, or estimating credit needs.</p> |                             |            |                       |

| Synopsis   | <p>The electromagnetic spectrum is a key enabler for modern technology and scientific discovery. The ongoing growth in use of wirelessly connected devices has led to spectrum congestion that impacts a broad range of national, economic, and social activities. This creates a critical need to train a future workforce with proficiency in the fundamentals of science, technology, engineering, and mathematics that enable further development of the electromagnetic spectrum as a resource (hereafter, "spectrum STEM"). This workforce must also have an awareness of interconnected spectrum-related technical, policy, regulatory, management, economic, and application issues needed to make effective decisions in a broad range of occupations. Through this Dear Colleague Letter (DCL), NSF seeks to encourage the STEM and policy-making communities to develop innovative education and workforce development plans to address the nation's future spectrum</p> |

## National Science Foundation Funding Opportunities

workforce needs. This DCL invites supplemental funding requests from PIs of existing awards in the following programs: Spectrum Efficiency, Energy Efficiency, and Security: Enabling Spectrum for All (SpecEES - NSF 19-529), NSF/Intel Partnership on Machine Learning for Wireless Networking Systems (MLWiNS - NSF 19-591), Spectrum and Wireless Innovation enabled by Future Technologies (SWIFT - NSF 20-537, NSF 21-539, NSF 22-571), Spectrum Innovation Initiative: National Center for Wireless Spectrum Research (SII-Center - NSF 21-558), Resilient and Intelligent NextG Systems (RINGS - NSF 21-581), and Spectrum Innovation Initiative: National Radio Dynamic Zones (SII-NRDZ - NSF 22-579).

| Deadline Dates (ALL) |   |   |
| Synopsis             | <p>With this Dear Colleague Letter, NSF invites requests for supplemental funding from existing quantum information science and engineering research awardees to add a new -- or strengthen an existing -- international dimension to their award. International collaboration should advance fundamental knowledge and discovery in quantum fields and enhance the NSF Principal Investigator's (PI) own research and/or education objectives as outlined in the existing NSF award. Supplemental funding requests should represent mutual benefit and true intellectual collaboration with international partners. International collaborations may consist of short-term visits (up to 1 month) to establish relationships or mid- to long-term visits (up to 12 months) to engage in research activities. While collaboration with Australia, Canada, Denmark, Finland, France, Germany, Japan, the Netherlands, South Korea, Sweden, Switzerland, and the United Kingdom are of particular interest, requests for international supplements to collaborate with other countries will also be considered.</p> |   |

|----------------------|--|-----------------------------|------------|-----------------------|---------------|
| Deadline Dates (ALL) | The National Science Foundation (NSF) and the US Department of Agriculture's National Institute of Food and Agriculture (USDA/NIFA) announce their intention to jointly fund Stage 2 proposals submitted to the Civic Innovation Challenge (CIVIC). CIVIC is a federal research and action competition that accelerates the transition to practice of foundational research and emerging technologies into communities through civic-engaged research and is comprised of two focused challenge tracks. Track A for CIVIC is centered on pre-disaster action around adaptation, mitigation, and resilience in community systems, services, and economic drivers that are vulnerable in the face of a changing climate. Track B is centered on enhancing peoples' access to essential resources and services—through efforts at the level of communities—where better accessibility could significantly improve quality of life and community resilience. This DCL is aligned with ongoing collaborative support from NSF and USDA/NIFA for foundational and applied research at the intersection of computational, engineering, agricultural, and social sciences. The CIVIC program is designed to build on these efforts through its support for pilot projects that transition foundational advancements in areas such as automation and artificial intelligence into transformative, research-driven solutions addressing local community challenges. Additionally, CIVIC flips the community-university dynamic, with communities identifying civic priorities ripe for innovation and then partnering with researchers to address those priorities. The program supports proposals with pilots that can be scaled and sustained long-term within the partnering community and have aspects that are transferable to other communities across the US. |                             |            |                       |               |

| Deadline Dates (ALL) | <p>The U.S. National Science Foundation (NSF) and the Deutsche Forschungsgemeinschaft e.V. (German Research Foundation, DFG) have signed a Memorandum of Understanding (MOU) on Research Cooperation. The MOU provides an overarching framework to encourage collaboration between U.S. and German research communities and sets out the principles by which jointly supported activities might be developed. The MOU provides for an international collaboration arrangement whereby U.S. researchers may receive funding from the NSF and German researchers may receive funding from DFG. The goal of this U.S.-German collaborative research opportunity is to help reduce some of the current barriers to working internationally. Through a "lead agency model," NSF and DFG will address these issues by allowing a team of U.S. and German researchers to submit a single collaborative proposal that will undergo a single review process at the lead agency for that fiscal year, with NSF as the lead.</p> |                             |            |                       |            |

| Deadline Dates (ALL) | <p>To better understand and combat the negative impacts of environmental change on human health, the NSF Directorate for Geosciences (GEO) proposes an opportunity for graduate students, supported by NSF awards, to participate in a paid, non-academic, internship. This opportunity provides funding for a graduate student to work on-site with public health or medical professionals for up to 6 months on a project of mutual interest that involves combining knowledge of, and work on, processes in and materials of the natural environment and how they impact human health.</p>   |                             |            |                       |            |

This partnership initiative capitalizes on prior investments, bilateral agreements, and relevant activities and provides for a multilateral arrangement to enable U.S. researchers to submit international collaborative proposals to NSF. The proposals are expected to undergo a single review process at NSF and be jointly funded by participating agencies. With this initiative, OISE invites visionary, ambitious, high quality collaborative research proposals that address scientific or technical challenges in any field of science, engineering, or education and require an international collaboration. Each proposal must engage researchers from the U.S., Ukraine, and at least one other country involved in this initiative. Priority will be given to projects that propose: (a) creative ways for enhancing efficiency and resiliency of international partnerships; (b) efficient concepts to prepare an internationally engaged research community and technical workforce; and (c) efficient and significant contributions to build a modern, state-of-the-art research, education and innovation ecosystem in Ukraine. Proposers are advised that all documents submitted to NSF may be shared with the agencies listed above. The collaborative opportunity described in this Dear Colleague Letter (DCL) remains in effect until archived and is intended to cover a 3-year pilot phase.</p> |                             |            |                       |             |

| Synopsis             | <p>The Directorates for Biological Sciences (BIO), Computer and Information Science and Engineering (CISE), STEM Education (EDU); Engineering (ENG), Geosciences (GEO), Mathematical and Physical Sciences (MPS), Social, Behavioral, and Economics Sciences (SBE) and the Office of Integrative Activities (OIA) at the National Science Foundation (NSF), through this Dear Colleague Letter (DCL) provide support for alternate pathways to encourage veterans' engagement in science, technology, engineering and mathematics (STEM) research in academia and industry. NSF's commitment to broadening participation is embedded in its Strategic Plan. Initiatives such as the Veterans Research Supplement (VRS) program emphasize the need to proactively seek and effectively develop STEM talent from all sectors and groups in society. NSF recognizes that veterans represent an underutilized workforce for U.S. STEM communities. Through this DCL - BIO, CISE, EDU, ENG, GEO, MPS, OIA and SBE hope to provide additional support to veterans transitioning from active military service to civilian careers and exploring education options through the Post-9/11 GI Bill.</p> |                                   |                |                          |               |

Foundation (NSF). The NSF and Center for Biomedical Engineering Technology Acceleration (BETA) housed in the National Institutes of Health (NIH)- National Institute of Biomedical Imaging and Bioengineering (NIBIB) have entered into a partnership to support the training of graduate students to meet both the NSF's strategic workforce development objectives as well the NIBIB's mission to transform through engineering the understanding of disease and its prevention, detection, diagnosis, and treatment and NIBIB's support of the next generation of diverse, interdisciplinary researchers across the career continuum. This Dear Colleague Letter (DCL) describes this unique partnership with NIBIB/BETA and is aligned with and conforms with the NSF INTERN opportunity described in the Dear Colleague Letter: Non-Academic Research Internships for Graduate Students (INTERN) Supplemental Funding Opportunity. This DCL is referred to as the NSF - NIBIB/BETA INTERN DCL.

| Synopsis             | The National Science Foundation (NSF) and National Institute of Standards and Technology (NIST) have shared interests in a variety of basic and applied scientific and engineering fields. This program is designed to facilitate collaborative research and educational activities among NIST scientific and engineering staff and researchers supported by NSF. Through use of supplemental funding requests in existing NSF awards, support may be requested for travel expenses and per diem associated with work on-site at NIST to collaborate on research with NIST staff and access specialized research instrumentation available at NIST for NSF-supported PIs, co-PIs, post-doctoral scholars, undergraduate and graduate students and other personnel associated with the NSF-NIST |                                   |                |                          |                  |

| Deadline Dates (ALL) |   | The Foundational Research in Robotics (Robotics) program supports research on robotic systems that exhibit significant levels of both computational capability and physical complexity. For the purposes of this program, a robot is defined as intelligence embodied in an engineered construct, with the ability to process information, sense, and move within or substantially alter its working environment. Here intelligence includes a broad class of methods that enable a robot to solve problems or make contextually appropriate decisions. Research is welcomed that considers inextricably interwoven questions of intelligence, computation, and embodiment. Projects may also focus on a distinct aspect of intelligence, computation, or embodiment, as long as the proposed research is clearly justified in the context of a class of robots. |                |                          |                  |

| Synopsis  | <p>The goal of the Computational and Data-enabled Science and Engineering (CDS&amp;E) meta-program is to identify and capitalize on opportunities for major scientific and engineering breakthroughs through new computational and data-analysis approaches and best practices. The CDS&amp;E meta-program supports projects that harness computation and data to advance knowledge and accelerate discovery above and beyond the goals of the participating individual programs. The intellectual drivers may be in an individual discipline or cut across more than one discipline in various Divisions and Directorates. A CDS&amp;E proposal should enable and/or utilize the development and adaptation of advances in research and infrastructure in computational and data science. The CDS&amp;E meta-program encourages research that pushes the envelope of science and engineering through computation and data, welcoming proposals in any research area supported by the participating</p> |                |                          |                  |

## National Science Foundation Funding Opportunities

divisions. A proposal may address topics that develop or enable interactions among theory, computing, experiment, and observation to achieve progress on hitherto intractable science and engineering problems. Areas of emphasis for CDS&E vary by program.

As a part of the Air Force Research Laboratory (AFRL), AFOSR's technical experts foster and fund research within the Air Force Research Laboratory, universities, and industry laboratories to ensure the transition of research results to support U.S. Air Force needs. Using a carefully balanced research portfolio, research managers seek to create revolutionary scientific breakthroughs enabling the Air Force and U.S. industry to produce world-class, militarily significant, and commercially valuable products. The focus is on research areas that offer significant and comprehensive benefits to our national warfighting and peacekeeping capabilities. These areas are organized and managed in two scientific Branches: Engineering and Information Sciences(RTA) ENGINEERING AND COMPLEX SYSTEMS (RTA1) INFORMATION AND NETWORKS (RTA2) Physical and Biological Sciences(RTB) PHYSICAL SCIENCES (RTB1) CHEMISTRY AND BIOLOGICAL SCIENCES (RTB2)</p> |   |                |                       |                |

| <b>Deadline Dates (ALL)</b> |  |  |                  |  |
| <b>Synopsis</b>             | <p>DTRA safeguards America and its allies from weapons of mass destruction (WMD) and provides capabilities to reduce, eliminate, and counter the threat and effects from chemical, biological, radiological, nuclear, and high yield explosives. DTRA seeks to identify, adopt, and adapt emerging, existing, and revolutionary sciences that may demonstrate high payoff potential to Counter-WMD (C-WMD) threats. This BAA is an extramural endeavor that combines the fundamental research, educational program, or other effort needs appropriate for basic or applied research funding of DTRA and other DoD interests. This announcement solicits ideas and topic-based pre-application white papers for long-term challenges that offer a significant contribution: to the current body of knowledge, to the understanding of phenomena and observable facts, to significantly advance revolutionary technology, to new concepts for technology application, or that may have impact on future C WMD threat reduction, expertise, or capabilities. A portion of this effort is expected to be devoted to awards for science, technology, engineering and mathematics education programs with a C-WMD focus, such as, but not limited to postdoctoral fellowships, stipends, degrees, visiting scientist programs, student exchange programs, and development of accredited C-WMD curricula.</p> |  |                  |  |

|        | <p>Synopsis</p> <p>The emergence and spread of the new respiratory Corona virus Disease 2019 (COVID-19), which was declared a Public Health Emergency in the United States on January 31, 2020, has catalyzed significant activity by Federal, state, and local governments; the healthcare community; residents across the United States; and people around the world. The National Biodefense Strategy is the nation's plan for ensuring that the country is prepared for, responding to, and recovering from health incidents such as these. As a partner in the Strategy, the Department of Energy (DOE) contributes science and technology to support these efforts. This is not the first emerging infectious disease event that the world will face, nor will it be the last. DOE is soliciting ideas about how DOE and the National Labs might contribute resources to help address COVID-19 through science and technology efforts and collaborations.</p> |   |                       |               |

| Synopsis             | <p>The USAMRDC's mission is to provide solutions to medical problems of importance to the American Service Member at home and abroad, as well as to the general public at large. The scope of this effort and the priorities attached to specific projects are influenced by changes in military and civilian medical science and technology (S&amp;T), operational requirements, military threat assessments, and national defense strategies. Extramural research and development programs play a vital role in the fulfillment of the objectives established by the USAMRDC. Research and development funded through this BAA are intended and expected to benefit and inform both military and civilian medical practice and knowledge. This BAA utilizes competitive procedures in accordance with 10 USC 2302(2)(B) for the selection for award of S&amp;T proposals/applications. For the purposes of this BAA, S&amp;T includes activities involving basic research, applied research, advanced technology development, and, under certain conditions, may include activities involving advanced component development and prototypes.</p> |  |               |                       |               |

|        | Synopsis  | <p>A primary emphasis of the USSOCOM Biomedical, Human Performance, and Canine Research Program is to identify and develop techniques, knowledge products, and materiel (medical devices, drugs, and biologics) for early intervention in life-threatening injuries; prolonged field care (PFC); human performance optimization; canine medicine/performance; brain health; immune response; automation of systematic reviews and metanalysis; and novel post-traumatic stress, depression, and anxiety treatment. Special Operations Forces (SOF) medical personnel place a premium on medical equipment that is small, lightweight, ruggedized, modular, multi-use, and designed for operation in extreme environments. The equipment must be easy to use, require minimum maintenance, and have low power consumption. Drugs and biologics should optimally not require refrigeration or other special handling. All materiel and related techniques must be simple, effective, and easily modified for commercialization. Research projects may apply existing scientific and technical knowledge for which concept and/or patient care efficacy have already been demonstrated to meet SOF requirements. The proposed research must be relevant to active-duty service members, veterans, military beneficiaries, and/or the American public. Relevant research must be responsive to the health care needs of the U.S. Armed Forces, family members of the U. S. Armed Forces, U.S. Veterans, and civilian populations. Proposals must address a relevant health problem responsive to one of the RAIs identified below. Additional RAIs may be added during the life of the BAA (FY23-FY28).</p> |                  |                       |               |

| Deadline Dates (ALL)                          | The DoD and the Nation need the best scientists and engineers to sustain defense capabilities. This can be accomplished through partnerships with, and support of, Institutions of Higher Education (IHE). The DoD will address this need by supporting innovative research and education programs that encourage students to pursue careers in science, technology, engineering and mathematics (STEM), particularly at covered educational institutions. The DEVCOM ARL invites applications from covered educational institutions that meet the 10 U.S.C. § 4144 objective to enhance defense-related research and education. The statutory objective shall be accomplished through initiatives designed to: • enhance the research and educational capabilities in areas of importance to national defense; • increase the number of graduates STEM disciplines; and • encourage research and educational collaborations between such institutions and other institutions of higher education, Government defense organizations, and the defense industry. |               |                       |               |

| Deadline Dates (ALL)                          | The ARO is soliciting proposals for Staff Research Program opportunities. The purpose of the program is to enable ARO scientific staff to maintain and expand professional competence in support of fulfilling the ARO mission through the conduct of hands-on, basic research. The staff research will be performed collaboratively with institutions external to ARO. Staff research efforts will involve scientific study directed toward advancing the state-of-the-art or increasing knowledge  |               |                       |               |

| Synopsis             | <p>The U.S. Army Research Office (ARO) in partnership with NSA's Laboratory for Physical Science (LPS) is soliciting Incubator, Collaboration, and Fellowship research proposals for participation in the LPS Qubit Collaboratory (LQC). The mission of the LQC can be captured in three broad goals: 1) pursue disruptive fundamental research and enabling technologies with a focus on qubit development for quantum computing and other applications (such as sensing); 2) grow deep, collaborative partnerships to tackle the most difficult and relevant long-term problems in quantum information science and technology; and 3) build a quantum workforce of tomorrow through research experiences in government at LPS and at LQC partners. The LQC will offer a mechanism for collaborative research between LPS and academia, industry, FFRDCs, and Government Laboratories to advance foundational and transformative research on challenging problems that have hindered progress in quantum information processing and associated technologies.</p> |  |                      |                       |               |

| Synopsis             | <p>The U.S. Agency for International Development (the Agency), Office of Population and Reproductive Health (PRH) is pleased to announce the Promoting Results and Outcomes through Policy and Economic Levers (PROPEL) Annual Program Statement (APS). This APS contributes to the Agency's health development priorities, which correspond to the goals of: preventing maternal and child deaths, controlling the HIV/AIDS epidemic, and combating infectious disease. The purpose of this APS is to improve the enabling environment for equitable and sustainable health services, supplies and delivery systems through: policy development and implementation; adequate, predictable, and sustainable financing; enhanced government stewardship, transparency, and accountability; and an engaged and informed civil society prepared to advocate for improved systems and outcomes. This APS has a specific emphasis on voluntary, rights-based family planning and reproductive health (FP/RH), and FP/RH integration with maternal and child health (MCH), and HIV/AIDS. It will encourage work across health elements, systems, and development sectors, with specific efforts in increasing FP/RH demand, facilitating FP uptake, and advancing other FP/RH-related outcomes.</p> |

|        | Deadline Dates (ALL)  |  |
|        | Synopsis  | The intent of the EDS Accelerator Award is to support the commercialization of an ongoing cancer research project and to validate and de-risk technologies. Proposals should address key experiments required to move findings toward commercialization, that do not easily fit into traditional funding mechanisms. This mechanism is not designed to initiate new projects or develop new directions for an ongoing project. The proposal should be commercially driven with the PI having a plan to license the technology, either to an established company or a start-up if the experiment(s) are successful. |

| Synopsis             | AFTE is offering a Research and Development Assistantship for science and technology-related R&D in firearm and toolmark identification. The sponsor invites proposals aimed at developing or improving investigative methods and techniques to advance the field. AFTE invites members to explore innovative technologies and techniques to advance their goals. Recipients will have the freedom to experiment with new approaches, challenge conventional wisdom, and address recurring issues. |  |                       |               |

| Synopsis             | CHDI Foundation is exclusively dedicated to collaboratively developing therapeutics that will substantially improve the lives of individuals with HD. The Foundation's preclinical research programs are organized into four interconnected Thematic Areas; namely 1) targeting mutant huntingtin DNA, RNA, and protein, 2) targeting somatic instability and mismatch handling and repair mechanisms related to modifier genes, 3) targeting the non-mismatch repair genetic modifiers, and 4) targeting gene editing of the causative triplet repeat mutation in the huntingtin gene. To implement its diverse research portfolio, CHDI Foundation funds and work with academic researcher colleagues around the world. CHDI is not a general research funding body that issues financial grants, nor does it have a research proposal submission cycle. However, CHDI is receptive to novel ideas and will explore new areas of biology that have relevance to HD, particularly when there is either robust human data evidence or the therapeutic approach has disease-modifying potential. |                 |  |

| Synopsis             | <p>There has been important progress in Duchenne muscular dystrophy (DMD) research over the last decade, and yet there is still a lack of understanding of the DMD heart and how to treat it. The sponsor is aiming to invest up to £1.5 million in 2024 to fund research into understanding and treating the hearts of people with DMD. To maximize the impact of our funding, the sponsor has divided the call for research projects into two complimentary strands: Strand one – Help the Heart: This cardiac themed open research call will run until the end of 2024 with a broad scope, but focused on the cardiac unmet needs in DMD, using our response mode funding model. There are details about the scope, eligibility and submission process below. Strand two – A therapeutic focused call: More details on the scope and eligibility will be published in due course.</p> |                                    |                       |               |

|        | Synopsis   | The aim of this scheme is to support research meetings, which aid the initiation or development of interdisciplinary research projects and networks in PID. The workshops should be directed at researchers at all levels of qualification from doctoral students to established scientists. The core of the applicants should be ESPID scientists of good standing, yet reaching out to scientists with other specializations (e.g. epidemiologists, microbiologists, immunologists) is encouraged. The Collaborative Research Meeting Award is available for already established and funded networks, but it is focused on those at an early stage of development, or where wider collaboration across Europe and beyond is being sought. In order to assure sufficient interest in the research topic, which is essential for forming fruitful international collaborations, the application should be signed by researchers from at least three countries. ESPID will only support one award relating to any one project. |                       |               |

| Synopsis             | The Focused Ultrasound Foundation provides funds first-in-human and other innovative clinical trials involving the use of image-guided focused ultrasound to treat diseases. Funding for clinical trials is determined through a peer-review process, and the timing and dollar amounts are determined on a case-by-case basis. Priority is given to clinical indications with a clear patient need. MD and PhD level scientists affiliated with a research institution are eligible to apply for funding. Post-doctoral researchers are encouraged to apply for funding but will need to list themselves as a co-investigator along with the lab principal investigator. Full-time employees at a company are also eligible to apply for funding. |                               |                       |               |                |

|---|---|-----------------------|---------------|
| Synopsis  | Fellowships provide the necessary resources to support and encourage the development of young scientists who benefit from the mentorship of prominent researchers. Applicants must hold a postdoctoral fellowship position at an institution/university at the time of award submission and throughout the proposed awarded period. The hope is that our fellows will later assume professorial roles in departments around the world, which currently have no representation in Angelman syndrome research to further the mission of FAST. Applicants may request up to \$50,000 per year for up to two years for salary, fringe benefits, and consumable costs. |                       |               |

| Synopsis   | FAST continually seeks to expand its pool of researchers in the field of AS and offer support to outstanding scientists who are eager to explore and study AS. These awards will be granted to promising new scientists that are looking to start a significant research program focusing on translational research in Angelman syndrome, or on technologies specifically relevant to advancing Angelman Syndrome treatment modalities. The applicants for the New Investigator Awards should be new Primary Investigators, within their first five years of an academic position at an institution/university. New Investigator Awards are either one or two year grants, made in one-year allocations, with a maximum recommended funding of \$150,000 per year. |                       |               |

| Synopsis  | The Pediatric Hematology-Oncology Fellowship Program at the University of Washington is a 3-year training program that prepares physicians to become leaders in the field of pediatric hematology, oncology, and bone marrow transplant. The alliance of Seattle Children's Hospital, the University of Washington Medical Center, and Fred Hutch Cancer Center provides fellows access to some of the finest research and patient care institutions in the world. The fellowship is fully-funded by an NIH T32 training grant and institutional sources. Additional support is available to enable successful fellows to continue at a junior faculty level for an additional year with protected research time. The majority of fellows pursue careers in academic medicine, including clinical, epidemiological, translational or laboratory-based research. |                       |               |

funding sources are scarce or absent. The sponsor's focus is on finding practical solutions to both immediate and foreseeable challenges to therapy development. These include discovery of disease mechanisms, establishing pre-clinical and clinical testing methods, improving patient diagnosis, and establishing a patient registry. By solving as many of these issues as we can, the sponsor hopes to make therapy development for dysferlinopathy quicker and lower risk.

| Synopsis   | <p>The Lundbeck Foundation's ambition is to make Denmark leading in neuroscience research by funding relevant biomedical, health, clinical and other sciences in Denmark. The goal is to foster world-class research at Danish universities and Danish university hospitals. International collaboration and research knowledge exchange is one of the best ways to elevate the Danish research environment and strengthen the career path of the researchers involved. The purpose of the grant is for the Lundbeck Foundation to support larger international scientific meetings and conferences, held in Denmark to encourage collaboration and exchange of ideas and resources between Danish researchers and their international peers. Lundbeck Foundation believes that diversity strengthens science and for this reason diversity, including, but not limited to, gender and ethnic origin, is encouraged. It is therefore important that we receive applications from as many qualified scientists as possible, from all backgrounds.</p> |                       |            |

| Synopsis   | The Maine Medical Center (MMC) offers a total of two infectious diseases fellowship positions (one position per year). Candidates must have successfully completed three years of training in Internal Medicine in an approved allopathic or osteopathic training program and be board eligible in internal medicine. Candidate selection is based on the quality of previous training in internal medicine, evaluations of competence by the internal medicine program director and other references, and the personal qualities of the candidate as evaluated during the interview process. The program is most interested in candidates who wish to go on to an active clinical practice in infectious diseases. |                       |               |

| Synopsis             | The Transplant Hepatology Fellowship at Mayo Clinic's campus in Rochester, Minnesota, is the largest program of its kind in the country. This one-year fellowship offers you a thorough, advanced education in all aspects of hepatology. The curriculum is carefully designed to provide a balance of transplant and nontransplant clinical, didactic, and investigative experience, and to prepare you for a career in academic hepatology. Most graduates are currently employed at academic medical centers. The primary objective is to train superior physicians in the pathophysiological mechanisms, clinical manifestations, and management of liver disease. |   |                                     |

| Synopsis             | The Mammography/Women's Imaging Fellowship Program at Mayo Clinic in Rochester, Minnesota, will prepare fellows for subspecialty practice or an academic career in breast/women imaging. Within Radiology, the subspecialty area of breast imaging and intervention offers all screening and diagnostic tools. Breast imaging is a busy, high volume practice with a multi-disciplinary approach to breast disease. Fellows are supervised by staff consultants with increasing levels of independence based on experience and expertise. Research opportunities exist for interested fellows. Female pelvic imaging is offered through rotations in body MRI, US and CT. |   |                       |               |

| Deadline Dates (ALL)  | This one-year clinical fellowship provides advanced training in PET/CT, radionuclide therapy and general nuclear medicine in patients with cancer. Nuclear Oncology fellows are trained under the auspices of the Molecular Imaging and Therapy (MIT) Service in the Department of Radiology. Over 500,000 diagnostic and interventional radiology procedures were performed at MSKCC in 2017. Rotations are conducted at the main campus of Memorial Hospital/MSKCC, 1275 York Avenue. The MIT Service has 10 PET/CT, 1 PET-MRI, 4 SPECT/CT scanners, and 4 gamma cameras. A total of 16 ABNM-certified attendings work collaboratively with a team of 5 medical physicists, 8 nurses, 24 technologists, 5 radiopharmacists (assisted by 1 radiopharmacy technician), and 4 receptionists. The team performs 100-120 scans and treatments each day. Image analysis and reporting are done digitally. |                       |               |

| Synopsis             | The New York State Energy Research and Development Authority (NYSERDA) is seeking applications from organizations who wish to host a full-time Climate Justice Fellow for 1 year. NYSERDA will fund the fellow's salary as well as professional development training/mentoring and/or wrap-around services. Fellows must be members of a priority population. Host organizations must be working to advance climate justice and clean energy priorities for disadvantaged communities. It is anticipated that fellows from priority populations will work with community-based organizations, universities, municipalities, climate tech innovators/start-ups, venture development organizations and clean energy businesses. A total of \$6 Million in funding is available for this program. |   |                       |            |

|        | Synopsis   | <p>The NATO Science for Peace and Security (SPS) Programme enhances security-related civil science and technology to address emerging security challenges and their impact on international security. It connects scientists, experts and officials from NATO and its Partner nations to address these challenges through scientific research, technological innovation, and exchange of expertise and know-how. Advanced Training Courses (ATC) are tailor-made, modular courses designed to enable specialists in NATO countries to share their security-related expertise in one of the SPS Key Priority areas. ATCs are not intended to be lecture-driven, but to be intensive, interactive and practical in nature. Courses contribute to the training of experts in Partner nations and enable the formation and strengthening of international expert networks. Advanced Training Courses (ATC) are on average €60,000.</p> |                       |               |

| Synopsis             | The MR-Predominant Body Imaging Fellowship program at Northwestern University and Northwestern Memorial Hospital (NMH) in Chicago has eight one-year positions. Fellows rotate through magnetic resonance imaging (MRI), ultrasound and computed tomography (CT) imaging during the course of the year with the main focus of the fellowship on body MR imaging. The MR experience includes abdominal, pelvic and musculoskeletal examinations. CT examinations include all non-neurological applications including abdominal, chest and musculoskeletal CT. Ultrasound includes abdominal and pelvic, thyroid, testes, musculoskeletal and vascular/transplant applications. |                        |                       |               |

| Synopsis             | Nuttall Women's Health Request For Proposals (RFPs) are designed to stimulate innovative research that directly addresses the biological mechanisms specific to women and translates those findings into more effective clinical strategies. XXcelerate is committed to ensuring that clinical research findings are valid and relevant for women. Too often, exposures, interventions, diagnostics and treatments are evaluated without adequate attention to sex-specific biology. |   |                   |                       |               |

|        | Synopsis   | The Faculty Research Program offers qualified academic faculty an opportunity to collaborate with NETL principal investigators on research that is mutually beneficial to NETL and the participant at state-of-the-art NETL facilities. While typical appointments are part-time, some appointments are offered during the summer and as a sabbatical. Prior to the appointment, the NETL principal investigator and participant will define the scope of research and schedule the appointment period. Appointment periods range from one month to more than one year. Funding varies and is awarded based upon the participants academic salary. |

| Synopsis  | The Educational Fellowships for Practising Physicians is directed at physicians in established practice in Ontario, particularly those residing outside of the teaching centres, who wish to take a period of training to bring a needed clinical skill or knowledge to the community or to undertake training in research methodology. The fellowship provides course fees, if any, transportation, room, and board costs. Funds are not provided to replace income lost while undertaking a training program and the program is not designed to assist physicians taking refresher courses. |                       |               |

The overall goal of the Partnership is to increase the level of collaborative R&D amongst researchers and industry across the three jurisdictions. This collaboration aims to generate valuable discoveries and innovations which are transferable to the marketplace, or will lead to enhancements in health, disease prevention or healthcare. The Partnership achieves its goals through tri-partite |  |  |

| Synopsis   | The Stanford Division of Pain Medicine Training Program in Pain and Substance Use Disorders is intended to develop postdoctoral trainees' skills to become independent investigators in the fields of pain, substance abuse disorders, and their intersection. The training program (1-3 years) incorporates required and elective coursework, mentored research experiences, an individual integrated research project, seminars, and exposure to professional development skills, including grant proposal and manuscript writing. |                                 |                       |               |

| Synopsis                                 | The Audacious Project invites visionary social entrepreneurs and nonprofits to dream big — and helps to shape those dreams into multi-year plans that are both viable and sustainable. The project then invites its coalition of partners — which includes leading nonprofits and individual donors, along with the public — to pool their resources and work together in service of these ambitious ideas. The goal is to amplify the impact of the world's change-makers and change-funders, and move forward ideas with the potential to impact lives. |

| Deadline Dates (ALL)  | The Translational Research Institute for Space Health (TRISH) offers their Catalyst Grant Program to support proof-of-concept projects, directed technology developments that address critical needs in space health, maturation of promising concepts with strong preliminary findings, and innovative projects that present opportunities outside of regularly scheduled solicitation cycles. Any project that addresses the NASA Human Research Roadmap (HRR) and the TRISH initiatives may be proposed. Selected proposals will be funded as research grants. Multi-year proposals will be funded in one-year increments. Additional funding allocations to participating investigators will be based on the submitted budget, available funds, programmatic alignment, and project review. |                       |               |

|--------|---|--|-----------------------|---------------|
|        | Synopsis  | As part of the NSF-BSF joint program, the U.S.-Israel Binational Science Foundation (BSF) invites collaborative research proposals in Early-Concept applications in all the active NSF-BSF programs. The EAGER funding mechanism can be used to support exploratory work in its early stages on untested, but potentially transformative, research ideas or approaches. This work could be considered especially "high risk-high payoff" in the sense that it involves radically different approaches, applies new expertise, or engages novel disciplinary or interdisciplinary perspectives. The EAGER mechanism should not be used for projects that are appropriate for submission as "regular" (i.e., non-EAGER) NSF proposals. |                       |               |

| Synopsis             | <p>The Cytopathology Fellowship is an ACGME accredited program designed to train academically-oriented cytopathologists. Two positions are offered. Fellowships include both clinical and research training. It is the aim of the University of Iowa Hospitals &amp; Clinics cytopathology fellowship to provide the trainee with the in-depth knowledge and competence necessary for the practice of pathology with specialty expertise in cytopathology. This training includes not only interpretation of all types of cytologic specimens, but performance of fine needle aspirations (FNA) and assessment of pathologic specimens for adequacy using cytologic technique. Fellows will have opportunity to gain the experience and knowledge of technical, scientific and regulatory aspects of the practice of cytopathology necessary for oversight and administration of a cytopathology laboratory. Fellows who wish to pursue an academic career can receive the depth and breadth of training necessary to pursue an academic career with specialty expertise in cytopathology.</p> |                    |                       |               |
